December 1, 2017

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

Re: Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-17-4

Dear Secretary Perry:

As requested by DOE staff and pursuant to Order No. 202-17-4 (the "Order") issued on September 14, 2017 by the Secretary of Energy ("Secretary"), PJM Interconnection, LLC ("PJM") and Virginia Electric and Power Company ("Dominion Energy Virginia") respectfully submits the attached spreadsheet (Attachment 1) that reflects historical operations and emissions data for Yorktown Units 1 and 2 for the years 2015-2017. As requested by the DOE staff, the spreadsheet provides the same categories of information and in the same format used in Attachment 3 of the September 28, 2017 Report on Yorktown Units 1 and 2 operations. The spreadsheet is provided in accordance with the Secretary's directive to report all dates on which Yorktown Units 1 and 2 are operated as well as the estimated emissions associated with their operations.¹

Attachment 1 shows the actual runtime and air emissions data for the period, and includes hourly runtime data for the equipment for the Yorktown units, and raw and calculated data showing emissions data associated with operations of the equipment. The information reports hourly emissions of PM-10 and SO₂ in pounds per hour and pounds per million BTU, and mercury in pounds per hour and pounds per trillion BTU (Mercury and Air Toxics Standards (MATS) format) for the operating period beginning

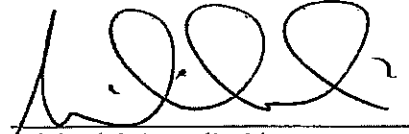

¹ Order at page 2.

January 1, 2015, through November 26, 2017. Additionally, Attachment 1 provides hourly emissions of NO_x in pounds per hour, greenhouse gases (as CO₂) in tons per hour, lead in pounds per hour, HCl in pounds per hour, HF in pounds per hour, and CO in pounds per hour. NO_x and SO₂ emissions are based on valid hours of Continuous Emissions Monitoring System (CEMS) data for the period. For the period beginning July 21, 2017, through November 26, 2017, PM-10 emissions are based on the emission factor derived from the July 21, 2017, stack test (0.0168 lbs/mmBtu corrected to 0.1143 lbs/mmBtu calculated for PM-10 filterable plus condensable). For the period beginning June 3, 2015, through July 20, 2017, PM-10 emissions are based on the emission factor derived from the June 3, 2015, stack test (0.015 lbs/mmBtu corrected to 0.087 lbs/mmBtu calculated for PM-10 filterable plus condensable). For the period beginning January 1, 2015, through June 2, 2015, PM-10 emissions are based on the emission factor derived from the July 29, 2014, stack test (0.035 lbs/mmBtu corrected to 0.1255 lbs/mmBtu calculated for PM-10 filterable plus condensable). CO₂ emissions are based on valid CEMS hours for the operating period. All other emissions were calculated using emission factors from AP-42, Fifth Edition, Volume 1, Chapter 1: External Combustion Sources and calculated hourly coal consumption in tons.²

PJM and Dominion Energy Virginia respectfully submits the information in this report be accepted by the Secretary as compliant with the Order's directives to report all dates on which Yorktown Units 1 and 2 are operated well as the estimated and actual emissions associated with their operations.

² Mercury and lead emissions were calculated using AP-42, Table 1.1-18. CO emissions were calculated using emission factors from AP-42, Table 1.1-3. Total HAP metals and individual HAP metals are not provided because MATS Table 2 (40 CFR 63, Subpart UUUUU) provides for compliance with either the PM limit or total non-mercury HAP metals limits or individual HAP metals. Dominion Energy Virginia is providing PM-10 emissions for the purposes of MATS. HCl and HF emissions were calculated using emission factors from AP-42, Table 1.1-15.

Respectfully submitted,

Confidential Contains CEII Material

Dear Secretary Perry:

PJM respectfully submitted the following in compliance with Order No. 202-17-4:

1. Public version of the first two week report on Yorktown Units 1 and 2 Operations (Attachment 4 with CEII material redacted); and
2. Non-Public version of the two week report (password protected because Attachment 4 contains CEII material).

Attachments 1, 2, 3 and 5 to the letter are in Excel format attached separately to this email. Please contact me if you have any questions.

Thank you.

Respectfully,

Steven R. Pincus

October 12, 2017

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

**Re: Report on Yorktown Units 1 and 2 Revised Construction Schedule –
Order No. 202-17-4**

Dear Secretary Perry:

Pursuant to Order No. 202-17-4 (the “Renewal Order”) issued on September 14, 2017, by the Secretary of Energy (“Secretary”), PJM Interconnection, L.L.C. (“PJM”) and Virginia Electric and Power Company (“Dominion Energy Virginia”) respectfully submit the attached Skiffes Creek Construction Transmission Outage Schedule and Yorktown Units 1 and 2 Emission Estimates as of October 9, 2017 (“Outage Schedule”). This submission is in accordance with the Secretary’s directive that PJM and Dominion Energy Virginia provide an updated outage schedule and associated Yorktown Units 1 and 2 emission estimates in the event the schedule or emission estimates change from those presented in the PJM Renewal Application Filing dated August 24, 2017 (“Renewal Application”).¹

Previously, on June 16, 2017 the Secretary issued Order No. 202-17-2 directing the operation of Yorktown Units 1 and/or 2 only as needed to ensure reliability for a 90 day period, subject to a dispatch methodology submitted to the Department of Energy (“DOE”) for review

¹ Renewal Order at 2. The Renewal Order directs that every two weeks PJM and Dominion shall report the dates and associated emissions that the Yorktown Units 1 and/or 2 are operated, but does not specify the time to report changes to the Outage Schedule and estimated associated emissions. Nevertheless, this report is filed at the end of the second two week period after the Renewal Order was issued.

(“Order”).² PJM filed for an extension of the Order on August 24 asserting that there is a continuing emergency in the North Hampton Roads area of the Virginia Peninsula and asked DOE to renew the Order for an additional 90 days.

In the Renewal Application, PJM explained that construction of the Skiffes Creek Transmission Project began in July 10 2017 and is expected to take approximately 18-20 months.³ The Renewal Application provided the then current Skiffes Creek Construction Transmission Outage Schedule and Yorktown Units 1 and 2 Emission Estimates as of August 18, 2017. The schedule included a construction schedule and planned transmission outage sequence, and Yorktown run and emission estimates. The schedule also provided actual emissions from the July 11-25 Yorktown unit runs, and the current estimated planned transmission outage time frames, transmission limiting contingencies, Dominion Zone load thresholds which trigger the need to operate Yorktown Units 1 and/or 2, estimated run time in days, and Dominion Energy Virginia’s estimated emissions for the remainder of the Order period based on the run time estimates. The Renewal Application explained that “the construction schedule will likely change...” and PJM and Dominion Energy Virginia would provide DOE with revised construction schedules and estimated emissions with each renewal application under the Order.⁴

In the Renewal Order, the DOE determined that an emergency exists due to the shortage of electric energy and the shortage of facilities for the generation and transmission of electric energy.⁵ The DOE also determined an emergency exists due to the imminent possibility of implementing the North Hampton Remedial Action Scheme (“RAS”) under a range of both steady-state and contingency events, including potential transmission congestion preventing the delivery of available generation to the North Hampton Roads area.⁶ For these reasons, the Secretary found that an emergency exists threatening imminent electric energy shortages, and that the Renewal Order is

² Order at 2.

³ Renewal Application at 3.

⁴ Renewal Application at 4.

⁵ Renewal Order at 1.

⁶ Summary of Findings DOE Order No. 202-17-4 at 7.

necessary to address the emergency and serve the public interest in the North Hampton Roads area.⁷ The Renewal Order also directed PJM and Dominion Energy Virginia to provide an updated outage schedule and associated Yorktown Units 1 and 2 emission estimates in the event the outage schedule or emission estimates change from those presented in the PJM Renewal Application.⁸

The attached Outage Schedule includes a revised construction schedule and planned transmission outage sequence, and Yorktown run and emission estimates. The Outage Schedule also provides actual emissions from the July 11-25 and August 21-23 Yorktown unit runs, and the current estimated planned transmission outage time frames, transmission limiting contingencies, Dominion Zone load thresholds which trigger the need to operate Yorktown Units 1 and/or 2, estimated run time in days, and Dominion Energy Virginia's estimated emissions for the remainder of the schedule based on the run time estimates.

The planned transmission outages are coordinated between PJM and Dominion Energy Virginia to ensure the reliability of service in the area and to support the Skiffes Creek construction schedule. Dominion Energy Virginia management in consultation with PJM revised the construction schedule after further review and meetings with its contractors regarding the Time of Year ("TOY") restrictions imposed by the Virginia Marine Resources Commission ("VMRC") and the U.S. Army Corps of Engineers ("Corps"). The TOY restrictions are imposed to minimize impacts of the installation of transmission tower foundations on anadromous fish species. The TOY restrictions limit the dates Dominion Energy Virginia can install foundations for the transmission towers to be located in the James River. VMRC prohibits the installation of foundations in the shallow waters of the James River between February 15 to June 15 of any given year, and the Corps prohibits the installation of foundations in the deep waters of the James River between February 15 and November 15 of any given year. Collectively, VMRC and Corps TOY restrictions prevent the installation of foundations in a continuous fashion, and finished foundations are needed to erect structures and start

⁷ Renewal Order at 1.

⁸ Renewal Order at 2.

pulling transmission wires. As a result of the TOY restrictions, the plan for the Skiffes Creek Project is extended by approximately five and one-half months, from December 30, 2018 to May 12, 2019.

The construction schedule will likely change again. PJM and Dominion Energy Virginia will provide an updated outage schedule and associated Yorktown Units 1 and 2 emission estimates in the event the outage schedule or emission estimates change further as directed by the Renewal Order.

REQUEST FOR CEII DESIGNATION

The filing consists of the following:

1. Non Public version of Creek Construction Transmission Outage Schedule and Yorktown Units 1 and 2 Emission Estimates as of October 9, 2017 (password protected containing Critical Energy Infrastructure (“CEII”) material); and
2. Public version of Creek Construction Transmission Outage Schedule and Yorktown Units 1 and 2 Emission Estimates as of October 9, 2017 (public version with CEII material redacted).

In regard to the Non Public version, PJM respectfully requests the information submitted to the DOE be designated as CEII pursuant Federal Power Act (“FPA”) Section 215A(d) and the implementing regulations, 18 C.F.R. Section 388.113.

In Fixing America's Surface Transportation Act (“FAST”) Section 215A(a)(3), CEII is specifically defined as information “designated as critical electric infrastructure information by ... the Secretary of the Department of Energy pursuant to subsection (d).”⁹ Under FPA Section 215A(a)(3), CEII includes information that is submitted to the DOE, and designated as such by DOE.¹⁰ The regulations define CEII in pertinent part as follows:

“1) Critical electric infrastructure information means information related to critical electric infrastructure ... Provided to the Commission or other Federal agency ... that is designated as critical electric infrastructure information by the Commission or the Secretary of the

⁹ FAST Act, Pub. L. No. 114-94, section 61,003, 129 Stat. 1312, 1776.

¹⁰ FAST Act, Pub. L. No. 114-94, section 61,003, 129 Stat. 1312, 1773 (“critical electric infrastructure information means information ... generated by or provided to the Commission or other Federal agency ... that is designated as critical electric infrastructure information by the Commission or the Secretary pursuant to subsection (d)”).

Department of Energy pursuant to section 215A(d) of the Federal Power Act. Such term includes information that qualifies as critical energy infrastructure information under the Commission's regulations. Critical Electric Infrastructure Information is exempt from mandatory disclosure under the Freedom of Information Act, 5 U.S.C. 552(b)(3) and shall not be made available by any Federal, State, political subdivision or tribal authority pursuant to any Federal, State, political subdivision or tribal law requiring public disclosure of information or records pursuant to section 215A(d)(1)(A) and (B) of the Federal Power Act.”

2) *Critical energy infrastructure information* means specific engineering, vulnerability, or detailed design information about ... existing critical infrastructure that:

- (i) Relates details about the production, generation, transportation, transmission, or distribution of energy;
- (ii) Could be useful to a person in planning an attack on critical infrastructure;
- (iii) Is exempt from mandatory disclosure under the Freedom of Information Act, 5 U.S.C. 552; and
- (iv) Does not simply give the general location of the critical infrastructure.”¹¹

PJM and Dominion Energy Virginia submits the redacted information is CEII because it provides details about the production, generation and transportation of energy, which if publically available could be useful in planning an attack on critical infrastructure in the North Hampton Road area of the Commonwealth of Virginia, namely the electric transmission system.

Respectfully submitted,

December 1, 2017

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

Re: Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-17-4

Dear Secretary Perry:

As requested by DOE staff and pursuant to Order No. 202-17-4 (the "Order") issued on September 14, 2017 by the Secretary of Energy ("Secretary"), PJM Interconnection, LLC ("PJM") and Virginia Electric and Power Company ("Dominion Energy Virginia") respectfully submits the attached spreadsheet (Attachment 1) that reflects historical operations and emissions data for Yorktown Units 1 and 2 for the years 2015-2017. As requested by the DOE staff, the spreadsheet provides the same categories of information and in the same format used in Attachment 3 of the September 28, 2017 Report on Yorktown Units 1 and 2 operations. The spreadsheet is provided in accordance with the Secretary's directive to report all dates on which Yorktown Units 1 and 2 are operated as well as the estimated emissions associated with their operations.¹

Attachment 1 shows the actual runtime and air emissions data for the period, and includes hourly runtime data for the equipment for the Yorktown units, and raw and calculated data showing emissions data associated with operations of the equipment. The information reports hourly emissions of PM-10 and SO₂ in pounds per hour and pounds per million BTU, and mercury in pounds per hour and pounds per trillion BTU (Mercury and Air Toxics Standards (MATS) format) for the operating period beginning

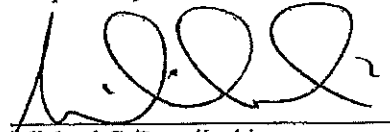

¹ Order at page 2.

January 1, 2015, through November 26, 2017. Additionally, Attachment 1 provides hourly emissions of NOx in pounds per hour, greenhouse gases (as CO₂) in tons per hour, lead in pounds per hour, HCl in pounds per hour, HF in pounds per hour, and CO in pounds per hour. NOx and SO₂ emissions are based on valid hours of Continuous Emissions Monitoring System (CEMS) data for the period. For the period beginning July 21, 2017, through November 26, 2017, PM-10 emissions are based on the emission factor derived from the July 21, 2017, stack test (0.0168 lbs/mmBtu corrected to 0.1143 lbs/mmBtu calculated for PM-10 filterable plus condensable). For the period beginning June 3, 2015, through July 20, 2017, PM-10 emissions are based on the emission factor derived from the June 3, 2015, stack test (0.015 lbs/mmBtu corrected to 0.087 lbs/mmBtu calculated for PM-10 filterable plus condensable). For the period beginning January 1, 2015, through June 2, 2015, PM-10 emissions are based on the emission factor derived from the July 29, 2014, stack test (0.035 lbs/mmBtu corrected to 0.1255 lbs/mmBtu calculated for PM-10 filterable plus condensable). CO₂ emissions are based on valid CEMS hours for the operating period. All other emissions were calculated using emission factors from AP-42, Fifth Edition, Volume 1, Chapter 1: External Combustion Sources and calculated hourly coal consumption in tons.²

PJM and Dominion Energy Virginia respectfully submits the information in this report be accepted by the Secretary as compliant with the Order's directives to report all dates on which Yorktown Units 1 and 2 are operated well as the estimated and actual emissions associated with their operations.

² Mercury and lead emissions were calculated using AP-42, Table 1.1-18. CO emissions were calculated using emission factors from AP-42, Table 1.1-3. Total HAP metals and individual HAP metals are not provided because MATS Table 2 (40 CFR 63, Subpart UUUUU) provides for compliance with either the PM limit or total non-mercury HAP metals limits or individual HAP metals. Dominion Energy Virginia is providing PM-10 emissions for the purposes of MATS. HCl and HF emissions were calculated using emission factors from AP-42, Table 1.1-15.

Respectfully submitted,

202-586-1283

Department of Energy
Washington, DC 20585

December 07, 2017

RECORDS OF CATEGORICAL EXCLUSION DETERMINATION

Order No. 202-18-2

The National Environmental Policy Act (NEPA) requires federal agencies to prepare Environmental Impact Statements (EISs) for major federal actions significantly affecting the quality of the human environment.

The Department of Energy's (DOE's) regulations that implement NEPA (10 C.F.R. Part 1021) require it to determine whether a proposal requires that an EIS, an Environmental Assessment (EA), or a Categorical Exclusion (CX) be prepared. A CX refers to a category of actions that DOE has determined do not individually or cumulatively have a significant effect on the human environment. As such, DOE need not prepare an EA or an EIS for CX actions.

On June 13, 2017, PJM Interconnection, L.L.C. (PJM), the Regional Transmission Organization (RTO) whose service territory includes the North Hampton Roads area east of Richmond, Virginia, filed a *Request for Emergency Order Pursuant to Section 202(c) of the Federal Power Act* (FPA) with the United States DOE "to preserve the reliability of [the] bulk power electric transmission system in the North Hampton Roads area." The emergency order would require Virginia Electric and Power Company (Dominion Energy Virginia), the public utility serving the area, to operate its two coal-fired units at its Yorktown Power Station (Yorktown Unit 1 and Yorktown Unit 2) to react to electricity reliability emergencies.

On June 16, 2017, the Secretary of Energy, on behalf of the DOE, issued Order No. 202-17-2, determining that an electricity reliability emergency exists in the Commonwealth of Virginia, ordering Dominion Energy Virginia to operate Units 1 and 2 of the Yorktown Power Station from June 16, 2017 to September 14, 2017 only when called upon for electricity reliability emergency issues.

On August 24, 2017, PJM filed a *Request for reissuance of DOE Order No. 202-17-2*, with DOE "to preserve the reliability of the bulk power transmission system in the North Hampton Roads area." Reissuance of *DOE Order No. 202-17-2* would require Dominion Energy Virginia, to operate Yorktown Unit 1 and Yorktown Unit 2 to react to reliability emergencies from September 15, 2017 to December 13, 2017.

On September 14, 2017, the Secretary of Energy, on behalf of the DOE, issued Order No. 202-17-4, determining that an electricity reliability emergency exists in the Commonwealth of Virginia, ordering Dominion Energy Virginia to operate Units 1 and 2 of the Yorktown Power Station from September 15, 2017 to December 13, 2017 only when called upon for electricity reliability emergency issues.

On November 29, 2017, PJM filed a *Request for reissuance of DOE Order No. 202-17-4*, with DOE “to preserve the reliability of the bulk power transmission system in the North Hampton Roads area.” Reissuance of *DOE Order No. 202 17 4* would require Dominion Energy Virginia, to operate Yorktown Unit 1 and Yorktown Unit 2 to react to reliability emergencies from December 14, 2017 to March 13, 2018.

PROPOSED ACTION: The DOE proposed Federal action would be the reissuance of DOE Order No. 202-17-4, as DOE Order No. 202-18-2, an emergency order targeted to prevent uncontrolled power disruptions and shedding of critical load in the North Hampton Roads area on the Virginia Peninsula for 90 days.

FPA section 202(c) (2) requires the Secretary of Energy to ensure that any 202(c) order that may result in a conflict with a requirement of any environmental law be limited to the “hours necessary to meet the emergency and serve the public interest, and, to the maximum extent practicable,” be consistent with any applicable environmental law and minimize any adverse environmental impacts.

BACKGROUND: In November 2011, and again in October 2012, Dominion Energy Virginia notified PJM of its plan to deactivate both units, effective December 31, 2014, because the units were not equipped to comply with the Environmental Protection Agency’s (EPA) Mercury and Air Toxics Standards (MATS), 40 C.F.R. part 63 subpart UUUUU.

By letters dated December 14, 2011 and April 11, 2014, PJM notified Dominion Energy Virginia that the deactivation of Yorktown Units 1 and 2 respectively would adversely affect the PJM transmission system absent the installation of certain transmission upgrades necessary to address the reliability impacts. PJM included the required transmission upgrade known as the Skiffes Creek Transmission Project a new 500kV transmission line across the James River as an upgrade.

PJM load flow studies indicate that generation from Yorktown Units 1 and 2 will be needed to prevent the possibility of uncontrolled power disruptions in the North Hampton Roads area or other loss of grid reliability such as the implementation of an automated controlled load shed scheme.

Dominion Energy Virginia developed, an automated controlled load shed scheme known as the Remedial Action Scheme (“RAS”) or as the “North Hampton RAS” to address deactivation of the Yorktown Units. The North Hampton RAS” would result in a forced interruption of service to load on the Peninsula. During certain high load conditions, this power interruption could result in power loss effecting over 150,000 customers in the North Hampton Roads^a area of Virginia. In addition to residential customers, hospitals, nursing homes, schools, commercial,

^a The North Hampton Roads load area includes the following: Charles City County, James City County, York County, Williamsburg, Yorktown, Newport News, Poquoson, Hampton, Essex County, King William County, King and Queen County, Middlesex County, Mathews County, Gloucester County, the City of West Point, King George County, Westmoreland County, Northumberland County, Richmond County, Lancaster County, and the City of Colonial Beach.

industrial, and national defense facilities would be without power during those peak load conditions on the Peninsula.

CX TO BE APPLIED: The proposed action identified above fits within the classes listed in Appendix B to Subpart D, of 10 CFR Part 1021-Categorical exclusions applicable to specific agency actions. Specifically:

B4.4 Power marketing services and activities.

Power marketing services and power management activities (including, but not limited to, storage, load shaping and balancing, seasonal exchanges, and other similar activities), provided that the operations of generating projects would remain within normal operating limits.

REGULATORY REQUIREMENT: The DOE proposed action is the reissuance of DOE Order No. 202-17-4, as DOE Order No. 202-18-2. The DOE Order reissuance will continue the operational limitations described for electricity reliability emergency issues.

The expected combined operation of Yorktown Units 1 and 2 reacting to electricity reliability emergencies under DOE Order No. 202-18-2 will be well below normal operating capacities and limits of Yorktown Units 1 and 2.

DOE has determined that the proposed action identified above will not have a significant effect on the human environment. Authorizing the proposed action will not (1) threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health including DOE and/or Executive orders; (2) require siting of new facilities or expansion of existing facilities; (3) disturb hazardous substances, pollutants or contaminants; or (4) adversely affect environmentally sensitive resources.

DETERMINATION: Based on my review of the above information concerning the proposed action, as NEPA Compliance Officer (as authorized under DOE Order 451.1B), I have determined that the proposed action fits within the specified class of actions, other regulatory requirements set forth above are met, and the proposed action is hereby categorically excluded from further NEPA review.

Signature: 
Brian Mills

Subject: OE 202c related by Wed 12/13

(b) (5)

BACKGROUND: Order No. 202-17-4, the Federal Power Act section 202(c) emergency order in effect for PJM and Dominion, ensures reliability in the North Hampton Roads area of Virginia, but it expires on December 13. PJM has requested another 90-day order. By statute, these orders are limited to 90 days in duration, and PJM expects it will need consecutive 202(c) orders through May 2019. In the renewal order, the Department of Energy repeats most of the terms of the current order, mainly requiring that PJM direct the operation of two coal-fired generation units owned by Dominion as needed to address reliability issues. The purpose is to avoid load shedding in the impacted area, which could extend to 150,000 customers including critical infrastructure facilities. This renewal order cross-references a Summary of Findings explaining both the rationale for and legality of the decision to renew Order No. 202-17-4 for another 90 days.

Re: Order No. 202-17-4 Renewal Application Filing

Dear Secretary Perry:

Pursuant to Section 202(c) of the Federal Power Act ("FPA"),¹ Section 301(b) of the Department of Energy Organization Act,² the Department of Energy's ("DOE") Rules of Practice and Procedure³ and Order No. 202-17-4 issued on September 14, 2017 by the Secretary of Energy ("Secretary") (the "September 14 Order"), PJM Interconnection, L.L.C. ("PJM") respectfully submits a request for a 90-day renewal of the September 14 Order. PJM incorporates by reference PJM's application submitted on June 13, 2017 (the "June 13 Application") and all attachments and appendices thereto, and PJM's August 24, 2017 renewal application (the "August 24 Application") and all attachments and appendices thereto. PJM also incorporates by reference the various reports to DOE concerning the operations and emission data provided by PJM and Virginia Electric and Power Company ("Dominion Energy Virginia") referenced below.

¹ 16 U.S.C. § 824a(c).

² 42 U.S.C. § § 7101 and 7151(b).

³ 16 C.F.R. §§ 205.370, 205.371 and 205.372 and 205.373.

Background

In the June 13 Application, PJM stated the need to request renewals of the Order No. 202-17-2 issued on June 16, 2017 (the "June 16 Order") on a rolling basis until the PJM ordered Regional Transmission Expansion Planning Process ("RTEPP") Skiffes Creek Transmission Project is placed into service, which was at that time anticipated to be completed in 18-20 months once all permits are issued.⁴ In the June 16 Order, the Secretary determined "that an emergency exists in the Commonwealth of Virginia due to a shortage of electric energy, a shortage of facilities for the generation of electric energy, and other causes, and that issuance of this Order will meet the emergency and serve the public interest."⁵ In doing so, the Secretary directed Dominion Energy Virginia to operate Yorktown Units 1 and 2 as directed by PJM as needed to address reliability issues for the initial 90-day period, June 16, 2017 to September 14, 2017, or any renewal thereof.⁶ The Secretary also directed PJM and Dominion Energy Virginia to develop and implement a dispatch methodology and submit it to the DOE upon implementation.⁷ The dispatch methodology was submitted by PJM on June 27, 2017.

In the August 24 Application, PJM submitted a request for a 90 day renewal of the June 16 Order. PJM requested an order of the Secretary under Section 202 (c) of the FPA which provides among other things that an emergency continues to exist in the Commonwealth of Virginia due to a shortage of electric energy, a shortage of facilities for the generation of electric

⁴ On October 12, 2017, PJM and Dominion Energy Virginia submitted a report updating the outage schedule for the Skiffes Creek Transmission Project with an extension of the construction schedule of approximately five and one-half months from December 30, 2018 to May 12, 2019.

⁵ June 16 Order page 1.

⁶ June 16 Order page 2.

⁷ June 16 Order page 2.

energy, and other causes, and that issuance of a renewal order (*i.e.* the September 14 Order) will meet the emergency and serve the public interest for another 90 renewal period (*i.e.* from September 14, 2017 to December 13, 2017).

In the September 14 Order, the Secretary determined “that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation and transmission of electric energy.”⁸ The Secretary granted PJM’s August 24 Application allowing operation of Yorktown Units 1 and 2, with certain modifications, for an additional 90-day period to expire on December 13, 2017.⁹ The Secretary’s directives required PJM and Dominion to “exhaust all reasonably and practically available resources, including demand response and behind-the-meter generation resources, prior to operating Yorktown Unit 1 and Yorktown Unit 2” consistent with “good utility practices” and in compliance with the dispatch methodology.¹⁰

⁸ September 14 Order page 1

⁹ September 14 Order page 1

¹⁰ September 14 Order page 2, paragraphs A and B. PJM has a detailed registration process as applied to demand response resources which are serving as capacity resources. PJM would utilize that information in applying this provision recognizing that: (i) the amount of registered demand response resources on the peninsula is limited; and (ii) during the renewal period covered by this application, certain demand response resources are available to PJM only in the summer period during the period. PJM has catalogued behind the meter resources based on data provided by the United States Energy Information Administration (“EIA”), Dominion and other sources. Although behind the meter resources are not subject to PJM’s direction, PJM works with Dominion to seek their assistance pursuant to the existing dispatch methodology. However, the DOE’s directive that PJM and Dominion Energy Virginia exhaust reasonably and practically available demand response and/or behind-the-meter resources applies only if exhausting such resources would lessen the need to operate the Yorktown Units 1 and/or 2 for reliability of the grid consistent with the dispatch methodology, PJM’s Governing Agreements and good utility practices. For example, if demand response and/or behind-the-meter resources would not provide needed reactive support, or otherwise not lessen the need to operate the Yorktown units for reliability, such resources would not be “reasonably and practically available” and operating the resources would not be consistent with the dispatch methodology, PJM’s Governing Agreements and good utility practices.

The September 14 Order directed PJM and Dominion Energy Virginia to report every two weeks during the term of the September 14 Order all dates on which Yorktown Units 1 and/or 2 are operated and associated air emissions and water usages for those dates.¹¹ The Secretary also directed reporting in the event the outage schedule or estimates changes from those presented in the August 24 Application. PJM and Dominion Energy Virginia submitted reports on September 28, 2017, August 22, 2017 and November 10, 2017, on the operation of Yorktown Units 1 and/or 2, and a report on October 12, 2017 revising the Skiffs Creek Transmission Project construction schedule and providing associated emission estimates.

The September 14 Order stated that “(i)f the conditions creating the emergency remain substantially unchanged, a renewal request should be submitted at least 14 calendar days before (the September 14 Order) expires.”¹² As conditions creating the emergency remain substantially unchanged, this renewal application is due on November 29, 2017.

Renewal Request

As stated in the June 13 Application as revised by the August 24 Application, the Skiffes Creek Transmission Project was expected to be completed and placed into service approximately 18-20 months after receipt of all applicable permits. With issuance of the U.S. Army Corps of Engineers’ (“Army Corps”) permit on July 3, 2017, Dominion Energy Virginia started construction of the Skiffes Creek project on July 10, 2017. As reported on October 12, 2017, the Skiffs Creek Transmission Project is scheduled to be completed May 12, 2019. Thus, given the continued extended nature of the emergency, PJM respectfully submits that the emergency as set

¹¹ September 14 Order page 2, paragraph C.

¹² September 14 Order page 2, paragraph D.

forth in the June 13 Application and August 24 Application and as determined by the Secretary in the June 16 Order and September 14 continues to exist.

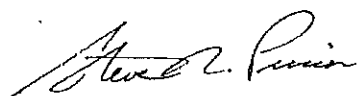

Therefore, PJM respectfully requests that the Secretary grant this renewal application and order the continued operation of Yorktown Units 1 and 2 to alleviate the emergency described in the June 13 Application, the August 24 Application and hereinabove prior to the expiration of the current order (*i.e.* December 13, 2017) under Section 202 (c) of the FPA. PJM request the requested renewal order provide as follows:

- (i) that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation and transmission of electric energy and that issuance of a renewal Order will meet the emergency and serve the public interest;
- (ii) from December 13, 2017 to March 13, 2018, Dominion Energy Virginia is directed to operate Yorktown Units 1 and 2 as directed by PJM as needed to maintain grid reliability or for other local area transmission issues;
- (iii) the limitations on operations ensure, to the maximum extent practicable, consistency with applicable laws and regulations, and the reporting requirements for operations and estimated emissions ensure transparency of implementation;
- (iv) consistent with the dispatch methodology submitted by PJM on June 27, 2017, good utility practice and the PJM Tariff, PJM and Dominion Energy Virginia shall exhaust all reasonably and practically available resources including demand response and identified behind-the-meter generation resources to the extent that

such resources address maintenance of grid reliability, prior to operating Yorktown Units 1 and/or 2;¹³

- (v) Dominion Energy Virginia shall continue to follow the dispatch methodology submitted by PJM on June 27, 2017;
- (vi) PJM and Dominion Energy Virginia shall report all dates on which Yorktown Units 1 and/or 2 are operated as well as the estimated emissions and water usage date for those dates within ten (10) business days of such operation; and
- (vii) in the event that the outage schedule or estimates change from those presented in this renewal application, within ten (10) business days PJM and Dominion Energy Virginia shall also provide updated outages schedules and associated Yorktown Units 1 and 2 emission estimates.

Respectfully submitted,

Steven R. Pincus

(b) (5)

BACKGROUND: Order No. 202-17-4, the Federal Power Act section 202(c) emergency order in effect for PJM and Dominion, ensures reliability in the North Hampton Roads area of Virginia, but it expires on December 13. PJM has requested another 90-day order. By statute, these orders are limited to 90 days in duration, and PJM expects it will need consecutive 202(c) orders through May 2019. In the renewal order, the Department of Energy repeats most of the terms of the current order, mainly requiring that PJM direct the operation of two coal-fired generation units owned by Dominion as needed to address reliability issues. The purpose is to avoid load shedding in the impacted area, which could extend to 150,000 customers including critical infrastructure facilities. This renewal order cross-references a Summary of Findings explaining both the rationale for and legality of the decision to renew Order No. 202-17-4 for another 90 days.

(b) (5)

BACKGROUND: Order No. 202-17-4, the Federal Power Act section 202(c) emergency order in effect for PJM and Dominion, ensures reliability in the North Hampton Roads area of Virginia, but it expires on December 13. PJM has requested another 90-day order. By statute, these orders are limited to 90 days in duration, and PJM expects it will need consecutive 202(c) orders through May 2019. (b) (5)

. This
renewal order cross-references a Summary of Findings explaining both the rationale for and legality of the decision to renew Order No. 202-17-4 for another 90 days.

RECOMMENDATION: (b) (5)

Thank you!
Katie

Department of Energy
Washington, DC 20585

Order No. 202-18-2

On November 29, 2017, PJM Interconnection, L.L.C. (PJM) submitted *Order No. 202-17-4 Renewal Application Filing* (Renewal Application) to the U.S. Department of Energy (DOE or Department). PJM is the Regional Transmission Operator (RTO) responsible for the reliability of the bulk power grid across several states, including in the North Hampton Roads area of Virginia.¹ Previously, on June 16, 2017, DOE issued Order No. 202-17-2 under section 202(c) of the Federal Power Act (FPA), 16 U.S.C. § 824a(c). That order authorized PJM to direct Virginia Electric and Power Company² (Dominion) to operate coal-fired Units 1 and 2 of its Yorktown Power Station, under certain specified circumstances, and only for a 90-day period. Order No. 202-17-4, issued on September 14, 2017 and under the same statutory authority, renewed Order No. 202-17-2 for an additional 90-day period. Order No. 202-17-4 expires at the end of today, by its own terms and by statute. 16 U.S.C. § 824a(c)(4)(A). In its Renewal Application, PJM asserts that there is a continuing emergency in the North Hampton Roads area of Virginia and asks the Department for another 90-day renewal.

Based on data and information submitted to the Department, and as explained in the accompanying Summary of Findings, I have determined that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation and transmission of electric energy. I find that issuance of this Order will meet the emergency and serve the public interest in the North Hampton Roads area, as required by FPA section 202(c). I have imposed limitations on operations outlined in this Order to ensure, to the maximum extent practicable, consistency with applicable environmental laws and regulations, and the reporting requirements for operations and estimated emissions ensure transparency of implementation. Accordingly, I hereby grant PJM's Renewal Application and issue Order No. 202-18-2 to allow operation of Yorktown Units 1 and 2, with modifications as explained below, for an additional 90-day period to expire on March 13, 2018.

¹ PJM has stated that "[t]he North Hampton Roads load area includes . . . Charles City County, James City County, York County, Williamsburg, Yorktown, Newport News, Poquoson, Hampton, Essex County, King William County, King and Queen County, Middlesex County, Mathews County, Gloucester County, the City of West Point, King George County, Westmoreland County, Northumberland County, Richmond County, Lancaster County, and the City of Colonial Beach." *Request for Emergency Order Pursuant to Section 202(c) of the Federal Power Act*, at 1 n.4 (June 13, 2017). Williamsburg, Newport News, Poquoson, and Hampton are independent cities; Yorktown is a Census-Designated Place and the county seat of York County; West Point is a town in King William County; and Colonial Beach is a town in Westmoreland County.

² Virginia Electric and Power Company's parent company is Dominion Energy, Inc.

Department of Energy Order No. 202-18-2

As I have determined that an emergency exists in the North Hampton Roads area of Virginia, I hereby order:

- A. By Eastern Prevailing Time, beginning on December 14, 2017, and continuing through March 13, 2018, in the event that PJM determines that generation from Yorktown Units 1 and/or 2 is needed to maintain grid reliability, Dominion shall operate Units 1 and/or 2 of the Yorktown Power Station as directed by PJM only as needed to address reliability issues. This directive applies under either or both of Scenario One and Scenario Two as described in the accompanying Summary of Findings. This directive incorporates and maintains the operational limitations described in the Environmental Protection Agency's Administrative Compliance Order, AED-CAA-113(a)-2016-0005. Consistent with good utility practice and the dispatch methodology submitted by PJM on June 27, 2017, PJM and Dominion shall exhaust all reasonably and practically available resources, including demand response and identified behind-the-meter generation resources to the extent that such resources provide support to maintain grid reliability, prior to operating Yorktown Unit 1 or Yorktown Unit 2.
- B. Dominion shall continue to comply with the dispatch methodology submitted by PJM on June 27, 2017.
- C. Every two weeks, PJM and Dominion shall report all dates between December 13, 2017 and March 13, 2018, on which Yorktown Units 1 and/or 2 are operated, and the associated air emissions and water usage for those dates. Specifically, PJM and/or Dominion shall report, in units that align with those used in 40 C.F.R. Part 63, Subpart UUUUU, Table 2, the daily air emissions of: 1) filterable particulate matter (PM) or total non-mercury hazardous air pollutant (HAP) metals or individual HAP metals, 2) hydrogen chloride (HCl) or sulfur dioxide (SO₂), and 3) mercury (Hg). PJM and/or Dominion shall also report daily air emissions of greenhouse gases and nitrogen oxides (NO_x) and daily water usage. In the event that the outage schedule or estimates change from those presented in the Renewal Application, PJM and/or Dominion shall also provide updated outage schedules and associated Yorktown Unit 1 and Yorktown Unit 2 emissions estimates within two weeks of such change.
- D. Renewal of this Order, should it be needed, must be requested before this Order expires. If the conditions creating the emergency remain substantially unchanged, a renewal request should be submitted at least 14 calendar days before this Order expires. If the conditions change, a renewal request should be submitted at least 21 calendar days before this Order expires.

Issued in Washington, D.C. at 5:45 PM this 13th day of December, 2017.

Rick Perry

Summary of Findings Department of Energy Order No. 202-18-2

December 13, 2017

Section 202(c) of the Federal Power Act (FPA) (codified at 16 U.S.C. § 824a(c)), through section 301(b) of the Department of Energy Organization Act (codified at 42 U.S.C. § 7151(b)), authorizes the Secretary of Energy, upon finding “that an emergency exists by reason of a sudden increase in the demand for electric energy, or a shortage of electric energy or of facilities for the generation or transmission of electric energy, or of fuel or water for generating facilities, or other causes,” to issue an order “requir[ing] . . . such temporary connections of facilities and such generation, delivery, interchange, or transmission of electric energy as in [the Secretary’s] judgment will best meet the emergency and serve the public interest.” 16 U.S.C. § 824a(c)(1). If the order “may result in a conflict with [an] environmental law or regulation,” then the Secretary must “ensure that such order requires generation, delivery, interchange, or transmission of electric energy only during hours necessary to meet the emergency and serve the public interest, and, to the maximum extent practicable, is consistent with any applicable . . . environmental law or regulation and minimizes any adverse environmental impacts.” *Id.* § 824a(c)(2). Orders issued under FPA section 202(c) “that may result in a conflict with [an] environmental law or regulation” expire 90 days after they are issued, but the Secretary “may renew or reissue such order[s] . . . for subsequent periods, not to exceed 90 days for each period, as [the Secretary] determines necessary to meet the emergency and serve the public interest.” *Id.* § 824a(c)(4)(A).

This Summary of Findings incorporates by reference the procedural history, section 202(c) analysis, and environmental analysis in DOE Order Nos. 202-17-2, 202-17-4, and 202-18-1, and the September 14, 2017 and November 6, 2017 Summaries of Findings.

On November 29, 2017, PJM Interconnection, L.L.C. (PJM) filed a Renewal Application with DOE. The filing incorporated by reference all reports required by Order No. 202-17-4, which are included in the docket of this Order. Citing a Virginia Electric and Power Company (Dominion) report dated October 12, 2017 (Report on Yorktown Units 1 and 2 Revised Construction Schedule (Oct. 12, 2017)), PJM stated that construction of the Project is now estimated to be completed May 12, 2019. Renewal Application at 2 n.4 & 4. The October 12 report explained that certain restrictions on construction, implemented by the Virginia Marine Resources Commission and U.S. Army Corps of Engineers, “are imposed to minimize impacts of the installation of transmission tower foundations on anadromous fish species.” Report on Yorktown Units 1 and 2 Revised Construction Schedule at 3. According to Dominion, Virginia Marine Resources Commission restrictions prevent installation of transmission tower foundations in the shallow waters of the James River from February 15 to June 15, and the U.S. Army

Summary of Findings for Department of Energy Order No. 202-18-2

Corps of Engineers prohibits installation of the foundations in the deep waters of that river from February 15 to November 15. *Id.* Consequently, Dominion declared the need to extend the construction schedule to May 2019, adding that “[t]he construction schedule will likely change again.” *Id.* at 4. Also emphasizing that the conditions creating the cited emergency are substantially unchanged, PJM underscored that transmission outages will continue to be required if Project construction is to be completed expeditiously. *See* Renewal Application at 4-5.

Between September 14, 2017 and December 13, 2017, the time period during which Order No. 202-17-4 was in effect, the Yorktown Units were in test operation for a total of just over three and a half hours. Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-17-4, Attachment 1 (Dec. 1, 2017). The “reliability test runs” took place during the afternoon and evening of October 25, and “included running sub-systems and firing of ignitors and warm up burners to functionally test and verify operation for start-up.” Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-17-4, at 2 (Nov. 9, 2017). The testing did not generate power for the grid, but was performed “as part of a quarterly effort to ensure reliability of these two units when called upon by PJM to provide grid stability.” *Id.* Yorktown Units 1 and 2 did not operate over the last 90 days to address a reliability issue.

Discussion

Order Nos. 202-17-2, 202-17-4, and 202-18-2 direct operation of Yorktown Units 1 and 2 as needed to address reliability issues, subject to a dispatch methodology submitted to the Department for review. Dominion has reported operation of Yorktown Units 1 and/or 2 for all or part of 19 days during the pendency of Order Nos. 202-17-2 and 202-17-4. Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-17-4, Attachment 1 (Dec. 1, 2017), included in the docket of this Order.

In the November 29 Renewal Application, PJM sought to clarify how it is implementing ordering paragraphs A and B of Order No. 202-17-4, which require that (1) “Consistent with good utility practice, PJM and Dominion shall exhaust all reasonably and practically available resources, including demand response and behind-the-meter generation resources, prior to operating Yorktown Unit 1 or Yorktown Unit 2,” and (2) “Dominion shall continue to comply with the dispatch methodology submitted by PJM on June 27, 2017.” PJM explained that “if demand response and/or behind-the-meter resources would not provide needed reactive support, or otherwise not lessen the need to operate the Yorktown units for reliability, such resources would not be ‘reasonably and practically available’ and operating the resources would not be consistent with the [terms of Order No. 202-17-4].” Renewal Application at 3 n.10. DOE concurs with this interpretation, and adjustments have been made to the ordering paragraphs of Order No. 202-18-2 to reflect that view.

Summary of Findings for Department of Energy Order No. 202-18-2

In considering renewal or reissuance of an order under FPA section 202(c) that may conflict with an environmental law or regulation, DOE is required to “consult with the primary Federal agency with expertise in the environmental interest protected by such law or regulation” and to include “conditions as such Federal agency determines necessary . . . to the extent practicable.” 16 U.S.C. § 824a(c)(4). The Environmental Protection Agency (EPA) is the primary federal agency in this case with expertise in the protected environmental interest, and the Department consulted with EPA after receiving the Renewal Application. Email from Acting Assistant Administrator Larry Starfield, Office of Enforcement and Compliance Assurance, to Bruce Walker, Assistant Secretary for Electricity Delivery and Energy Reliability (Dec. 11, 2017), included in the docket of this Order. After consulting with EPA, and consistent with that consultation, the Department found that the only appropriate short-term emissions limitation on Yorktown Units 1 and 2 would be to curtail operating hours to the maximum extent practical for reliability purposes.

Pursuant to the National Environmental Policy Act of 1969, the Department has determined that issuance of this Order fits within the category of actions included in Categorical Exclusion (CX) B4.4 and otherwise meets the requirements for application of a CX. The Order fits within the category of actions because it authorizes “[p]ower marketing services and power management activities (including, but not limited to, storage, load shaping and balancing, seasonal exchanges, and other similar activities), provided that the operations of generating projects would remain within normal operating limits.” Records of Categorical Exclusion Determination, Order No. 202-18-2, December 7, 2017, included in the docket of this Order; 10 C.F.R. part 1021, subpt. D, app. B, para. B4.4.

For the reasons stated above, the Secretary of Energy finds that an emergency exists threatening imminent electric energy shortages, and that this Order is necessary to address the emergency and serve the public interest in the North Hampton Roads area. The limitations on operation set forth in Order No. 202-18-2 and outlined above are, to the maximum extent practicable, consistent with applicable environmental laws or regulation and minimize any adverse environmental impacts, and the reporting requirements for operations and estimated emissions ensure transparency of implementation.

Subject: [External] 202(c) Renewal Application

PJM/Dominion Team:

Paragraph D of the Order No. 201-18-2 states "Renewal of this Order, should it be needed, must be requested before this Order expires. If the conditions creating the emergency remain substantially unchanged, a renewal request should be submitted at least 14 calendar days before this Order expires. If the conditions change, a renewal request should be submitted at least 21 calendar days before this Order expires."

To process the Order in a timely fashion, the DOE staff requests PJM/Dominion to submit the renewal application case 21 days in advance regardless of whether the conditions change.

Thanks for cooperation.
Rakesh Batra

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

Re: Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-18-2

Dear Secretary Perry:

Pursuant to Order No. 202-18-2 issued on December 13, 2017 (the “Order”) by the Secretary of Energy (“Secretary”), PJM Interconnection, L.L.C. (“PJM”) and Virginia Electric and Power Company (“Dominion Energy Virginia”) respectfully submit the attached air emissions report regarding PJM’s dispatch of Yorktown Unit 2 from January 2 through 8, 2018, including the periods needed to startup and ramp down the unit January 1 and January 8. This report is submitted in accordance with the Secretary’s directive that every two weeks PJM and Dominion are to “report all dates between December 13, 2017 and March 12, 2018, on which Yorktown Units 1 and/or 2 are operated, and the associated air emissions and water usage data for those dates.”¹

In the Order, the Secretary determined “that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation of electric energy.” The Secretary found that the issuance of this Order will meet the emergency and serve the public interest as required by Federal Power Act Section 202(c)² In doing so, the Secretary directed Dominion Energy Virginia to operate Yorktown Units 1 and/or 2 as directed by

¹ Order at page 2. As explained below, complete water usage data for the Unit 2 dispatch was not available in time for this report and will be filed once the data is complete.

² Order at page 1.

PJM only as needed to ensure grid reliability for a 90-day period December 13, 2017 and March 12, 2018.³

On January 1, PJM directed Dominion Energy Virginia to have Yorktown Unit 2 available the next day, and Dominion Energy Virginia began the startup process at approximately 20 hundred hours, and the unit was on line and generating power on January 2 at 17 hundred hours. PJM dispatched the unit off line around 11 hundred hours on January 8, and Dominion Energy Virginia determined that in the interests of safety and good operating practice, the unit would continue to run to empty the bunkers of coal. Emptying of the Yorktown coal bunkers is necessary and a standard operating procedure to prevent fires and to prevent the coal from packing and not flowing after sitting dormant for an extended period. That activity took until about 18 hundred hours on January 8.

Attachment 1 to this report is the Yorktown Power Station Bi-Weekly Mass Emissions for December 26 through January 8 that shows the actual runtime and air emissions data. This spreadsheet includes hourly runtime data for Yorktown Unit 2, hourly gross Megawatt (MW) outputs, and raw and calculated data showing air emissions data associated with operations of Yorktown Unit 2.⁴ PJM did not direct the operation of Yorktown Unit 1 during this time period, and Unit 1 did not operate.

The information in Attachment 1 reports Yorktown Unit 2 hourly emissions of PM-10 and SO₂ in pounds per hour and pounds per million BTU, and mercury in pounds per hour and pounds per trillion BTU (Mercury and Air Toxics Standards (MATS) format) for the operating period beginning December 6, 2017 through January 8, 2018. Additionally, Attachment 1 provides Unit 2 hourly emissions of NO_x in pounds per hour, greenhouse gases (as CO₂) in tons per hour, lead in pounds per hour, HCl in pounds per hour, HF in pounds per hour, and CO in pounds per hour. NO_x and SO₂ emissions are based on valid hours of Continuous Emissions Monitoring System (CEMS) data for the period. PM-10 emissions are

³ Order at page 2.

⁴ The Yorktown units can emit pollution while not generating MWs (*e.g.* during standby, startup and shutdown sequences). Thus, Attachment 1 shows the MW output during the period Yorktown Unit 2 provided power to the grid including startup and shutdown processes (January 1 and 8) and it shows the emissions data for operations of Yorktown Unit 2 including times when the unit was not generating power.

based on the emission factor derived from the July 21, 2017 stack test (0.0168 lbs/mmBtu corrected to 0.1143 lbs/mmBtu calculated for PM-10 filterable plus condensable). CO₂ emissions are based on valid CEMS hours for the operating period. All other emissions were calculated using emission factors from AP-42, Fifth Edition, Volume 1, Chapter 1: External Combustion Sources and calculated hourly coal consumption in tons.⁵

This report does not include the intake circulating water usage for Yorktown Unit 2 operations required by the Order. Operation of cooling water pumps extends over a period of time longer than unit operation to facilitate cooling of plant components that support the boiler and turbine. As a general rule cooling water will continue to be pumped until the turbine metal temperature is less than 300 °F. However, sometimes additional cooling water is necessary to complete proper cool down of auxiliary equipment and lubrication fluids after the turbine metal reaches 300 °F, as was the case with the Yorktown Unit 2 operations in January. PJM and Dominion Energy Virginia commit to providing the water usage data as soon as possible after the data is compiled, reviewed, and formatted to provide to DOE.

PJM and Dominion Energy Virginia respectfully submits the information in this report be accepted by the Secretary as compliant with the Order's directives to report all dates on which Yorktown

⁵ Mercury and lead emissions were calculated using AP-42, Table 1.1-18. CO emissions were calculated using emission factors from AP-42, Table 1.1-3. Total HAP metals and individual HAP metals are not provided because MATS Table 2 (40 CFR 63, Subpart UUUUU) provides for compliance with either the PM limit or total non-mercury HAP metals limits or individual HAP metals. Dominion Energy Virginia is providing PM-10 emissions for the purposes of MATS. HCl and HF emissions were calculated using emission factors from AP-42, Table 1.1-15.

The Honorable James Richard Perry
Re: Report on Yorktown Units 1 and 2
January 11, 2018
Page 4

Units 1 and/or 2 are operated December 13, 2017 and March 12, 2018, as well as the associated air emissions associated with their operations.

Respectfully submitted,

/s/ Steven R. Pincus

Dear Secretary Perry:

PJM and Dominion respectfully submit the attached water usage report for PJM's dispatch of Yorktown Unit 2 from January 2 through January 8, 2018, and the periods needed to cool down the plant and associated equipment until January 12, 2018. This report is submitted in compliance with Order No. 202-18-2 and as stated in the Report on Yorktown Unit 2 operations filed by PJM and Dominion Energy Virginia on January 11, 2018 (a copy of the January 11, 2018 Report is attached to this message for your convenience).

Please contact me if you have any questions.

Respectfully,

Steven R. Pincus

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

*Re: Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-18-2
Water Usage Report Associated with Unit 2 Operations Reported to the Secretary on
January 11, 2018*

Dear Secretary Perry:

Pursuant to Order No. 202-18-2 issued on December 13, 2017 (the "Order") by the Secretary of Energy ("Secretary") and as stated in the Report on Yorktown Unit 2 operations submitted to the Secretary on January 11, 2018 (the "January 11 Report"), PJM Interconnection, L.L.C. ("PJM") and Virginia Electric and Power Company ("Dominion Energy Virginia") respectfully submit the attached water usage report regarding PJM's dispatch of Yorktown Unit 2 from January 2 through January 8, 2018, including the periods needed to cool down the plant and associated equipment until January 12. This report is submitted in accordance with the Secretary's directive that every two weeks PJM and Dominion are to "report all dates between December 13, 2017 and March 12, 2018, on which Yorktown Units 1 and/or 2 are operated, and the associated air emissions and water usage data for those dates."¹

The January 11 Report, as reported to the Secretary, is as follows:

On January 1, PJM directed Dominion Energy Virginia to have Yorktown Unit 2 available the next day, and Dominion Energy Virginia began the startup process at

¹ Order at page 2. As explained below, complete water usage data for the Unit 2 dispatch was not available in time for the air emissions report provided in the January 11 Report.

approximately 20 hundred hours, and the unit was on line and generating power on January 2 at about 17 hundred hours. PJM dispatched the unit off line around 11 hundred hours on January 8, and Dominion Energy Virginia determined that in the interests of safety and good operating practice, the unit would continue to run to empty the bunkers of coal. Emptying of the Yorktown coal bunkers is necessary and a standard operating procedure to prevent fires and to prevent the coal from packing and not flowing after sitting dormant for an extended period. That activity took until about 18 hundred hours on January 8.²

As explained in the January 11 Report, additional time was required to compile the water usage data due to operational requirements associated with the cool down of Unit 2's auxiliary equipment and lubrication fluids after the turbine metal reaches 300 °F.³ Thus, the January 11 Report could not include the intake circulating water usage for Yorktown Unit 2 operations and PJM and Dominion Energy Virginia committed to providing this data to the Secretary as soon as possible.

Attachment 1 to this letter is the report concerning the intake circulating water usage for Yorktown Unit 2 operations required by the Order.⁴ PJM and Dominion Energy Virginia respectfully submits the information in this report be accepted by the Secretary as compliant with the Order's directives that every two weeks PJM and Dominion to report all dates on which Yorktown Units 1 and/or 2 are operated between December 13, 2017 and March 12, 2018, as well as the water usage data associated with their operations.

² January 11 Report at page 2.

³ See, January 11 Report at page 3.

⁴ There have been no dispatch operations of Yorktown Unit 1 or Unit 2 from January 11, 2018, to the date of this report.

Respectfully submitted,

/s/ Steven R. Pincus

Hi Lisa,

(b) (5)

If you have any questions or concerns, please address them to Rakesh Batra, Program Manager, at 6-1283 or Katie Jereza, x 6-0334. They would be able to respond to any inquiry about the 202c process.

Thanks,

Kathy Bittner

Re: Order No. 202-18-2 Renewal Application Filing

Dear Secretary Perry:

Pursuant to Section 202(c) of the Federal Power Act (“FPA”),¹ Section 301(b) of the Department of Energy Organization Act,² the Department of Energy’s (“DOE”) Rules of Practice and Procedure³ and Order No. 202-18-2 issued on December 13, 2018 by the Secretary of Energy (“Secretary”) (the “December 13 Order”), PJM Interconnection, L.L.C. (“PJM”) respectfully submits a request for a 90-day renewal of the December 13 Order. PJM incorporates by reference PJM’s initial application submitted on June 13, 2017, and all attachments and appendices thereto (the “June 13 Application”). PJM also incorporates by reference (i) PJM’s renewal applications submitted on November 29, 2017 (the “November 29 Application”), June 13, 2017 (the “June 13 Application”) and August 24, 2017 (the “August24 Application”) and all attachments and appendices thereto (collectively, “Renewal Applications”); and (ii) the various reports to DOE concerning the operations and emission data provided by PJM and Virginia Electric and Power Company (“Dominion Energy Virginia”) referenced below.

¹ 16 U.S.C. § 824a(c).

² 42 U.S.C. § § 7101 and 7151(b).

³ 16 C.F.R. §§ 205.370, 205.371 and 205.372 and 205.373.

I. BACKGROUND

A. *The June 13 Application*

In the Renewal Applications, PJM stated the need to request renewals of the Order No. 202-17-2 issued on June 16, 2017 (the “June 16 Order”) on a rolling basis until the PJM ordered Regional Transmission Expansion Planning Process (“RTEPP”) Skiffes Creek Transmission Project is placed into service, which was originally anticipated to be completed in 18-20 months once all permits are issued.⁴ In the June 16 Order, the Secretary determined “that an emergency exists in the Commonwealth of Virginia due to a shortage of electric energy, a shortage of facilities for the generation of electric energy, and other causes, and that issuance of this Order will meet the emergency and serve the public interest.”⁵ In doing so, the Secretary directed Dominion Energy Virginia to operate Yorktown Units 1 and 2 as directed by PJM as needed to address reliability issues for the initial 90-day period, June 16, 2017 to September 14, 2017, or any renewal thereof.⁶ The Secretary also directed PJM and Dominion Energy Virginia to develop and implement a dispatch methodology and submit it to the DOE upon implementation.⁷ The dispatch methodology was submitted by PJM on June 27, 2017.

B. *The August 24 Application for Renewal of the June 16 Order.*

In the August 24 Application, PJM submitted a request for a 90 day renewal of the June 16 Order. PJM requested an order of the Secretary under Section 202 (c) of the FPA which

⁴ On October 12, 2017, PJM and Dominion Energy Virginia submitted a report updating the outage schedule for the Skiffes Creek Transmission Project with an extension of the construction schedule of approximately five and one-half months from December 30, 2018 to May 12, 2019

⁵ June 16 Order, page 1.

⁶ June 16 Order, page 2.

⁷ June 16 Order, page 2.

provides among other things that an emergency continues to exist in the Commonwealth of Virginia due to a shortage of electric energy, a shortage of facilities for the generation of electric energy, and other causes, and that issuance of a renewal order will meet the emergency and serve the public interest for another 90 renewal period (i.e. from September 14, 2017 to December 13, 2017). As a result, the Secretary issued Order No. 202-17-4 (the “September 14 Order”).

In the September 14 Order, the Secretary determined “that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation and transmission of electric energy.”⁸ The Secretary granted PJM’s August 24 Application allowing operation of Yorktown Units 1 and 2, with certain modifications, for an additional 90-day period to expire on December 13, 2017.⁹ The Secretary’s directives required PJM and Dominion to “exhaust all reasonably and practically available resources, including demand response and behind-the-meter generation resources, prior to operating Yorktown Unit 1 and Yorktown Unit 2” consistent with “good utility practices” and in compliance with the dispatch methodology.¹⁰

⁸ September 14 Order page 1

⁹ September 14 Order page 1

¹⁰ September 14 Order, page 2, paragraphs A and B. PJM has a detailed registration process as applied to demand response resources which are serving as capacity resources. PJM would utilize that information in applying this provision recognizing that: (i) the amount of registered demand response resources on the peninsula is limited; and (ii) during the renewal period covered by this application, certain demand response resources are available to PJM only in the summer period during the period. PJM has catalogued behind the meter resources based on data provided by the United States Energy Information Administration (“EIA”), Dominion and other sources. Although behind the meter resources are not subject to PJM’s direction, PJM works with Dominion to seek their assistance pursuant to the existing dispatch methodology. However, the DOE’s directive that PJM and Dominion Energy Virginia exhaust reasonably and practically available demand response and/or behind-the-meter resources applies only if exhausting such resources would lessen the need to operate the Yorktown Units 1 and/or 2 for reliability of the grid consistent with the dispatch methodology, PJM’s Governing Agreements and good utility practices. For example, if demand response and/or behind-the-meter resources would not provide needed reactive support, or otherwise not lessen the need to operate the Yorktown units for reliability, such resources would not be “reasonably

The September 14 Order directed PJM and Dominion Energy Virginia to report every two weeks during the term of the September 14 Order all dates on which Yorktown Units 1 and/or 2 are operated and associated air emissions and water usages for those dates.¹¹ The Secretary also directed reporting in the event the outage schedule or estimates changes from those presented in the August 24 Application. PJM and Dominion Energy Virginia submitted reports on September 28, 2017, August 22, 2017 and November 10, 2017, on the operation of Yorktown Units 1 and/or 2, and a report on October 12, 2017 revising the Skiffs Creek Transmission Project construction schedule and providing associated emission estimates.

The September 14 Order stated that “(i)f the conditions creating the emergency remain substantially unchanged, a renewal request should be submitted at least 14 calendar days before (the September 14 Order) expires.”¹² As conditions creating the emergency remain substantially unchanged, the renewal application was due on November 29, 2017.

C. The November 29 Application for Renewal of the September 14 Order.

As conditions creating the emergency remained substantially unchanged from the date of the issuance of the September 14 Order, PJM submitted a 90 day renewal application (*i.e.*, the November 29 application). In the November 29 Application, PJM requested an order of the Secretary under Section 202 (c) of the FPA which provides among other things that an emergency continues to exist in the Commonwealth of Virginia due to a shortage of electric

and practically available” and operating the resources would not be consistent with the dispatch methodology, PJM’s Governing Agreements and good utility practices.

¹¹ September 14 Order page 2, paragraph C.

¹² September 14 Order page 2, paragraph D.

energy, a shortage of facilities for the generation of electric energy, and other causes, and that issuance of a renewal order will meet the emergency and serve the public interest for another 90 renewal period (*i.e.*, from December 14, 2017 to March 13, 2018). As a result, the Secretary issued the December 13 Order.

In the December 13 Order, the Secretary determined “that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation and transmission of electric energy.”¹³ The Secretary granted PJM’s November 29 Application allowing operation of Yorktown Units 1 and 2, with certain modifications, for an additional 90-day period to expire on March 13, 2017.¹⁴ The Secretary’s directives require PJM and Dominion to “exhaust all reasonably and practically available resources, including demand response and behind-the-meter generation resources, prior to operating Yorktown Unit 1 and Yorktown Unit 2” consistent with “good utility practices” and in compliance with the dispatch methodology.¹⁵

¹³ December 13 Order, page 1.

¹⁴ December 13 Order, page 1.

¹⁵ December 13 Order, page 2, paragraphs A and B. In the Summary of Findings of Department of Energy Order No. 202-18-2, the Secretary concurred with PJM’s interpretation of the implementing paragraphs A and B of the September 14 Order as follows: *In the November 29 Renewal Application, PJM sought to clarify how it is implementing ordering paragraphs A and B of Order No. 202-17-4, which require that (1) “Consistent with good utility practice, PJM and Dominion shall exhaust all reasonably and practically available resources, including demand response and behind-the-meter generation resources, prior to operating Yorktown Unit 1 or Yorktown Unit 2,” and (2) “Dominion shall continue to comply with the dispatch methodology submitted by PJM on June 27, 2017.” PJM explained that “if demand response and/or behind-the-meter resources would not provide needed reactive support, or otherwise not lessen the need to operate the Yorktown units for reliability, such resources would not be ‘reasonably and practically available’ and operating the resources would not be consistent with the [terms of Order No. 202-17-4].” Renewal Application at 3 n.10. DOE concurs with this interpretation, and adjustments have been made to the ordering paragraphs of Order No. 202-18-2 to reflect that view. December 12 Order page 2.*

The December 13 Order directed PJM and Dominion Energy Virginia to report every two weeks during the term of the December 13 Order all dates on which Yorktown Units 1 and/or 2 are operated and associated air emissions and water usages for those dates.¹⁶ The Secretary also directed reporting in the event the outage schedule or estimates changes from those presented in the November 29 Application. PJM and Dominion Energy Virginia submitted a report to the Secretary on January 11, 2018, on the dates Yorktown Units and/or 2 were operated and associated air emissions (the January 11 Report”). Because the intake circulating water usage data for Yorktown Unit 2 operations was not yet available on January 11, 2018, PJM and Dominion Energy Virginia submitted a report on January 25, 2018, reporting to the secretary the water usage data for Yorktown Unit 2 operations on the dates PJM dispatched Yorktown Unit 2 (*i.e.*, January 2 through January 8, 2018).

The December 13 Order stated that “(i)f the conditions creating the emergency remain substantially unchanged, a renewal request should be submitted at least 14 calendar days before (the September 14 Order) expires.”¹⁷ Since the December 13 Order expired on March 13, 2018, PJM respectfully submits this renewal request.

II. RENEWAL REQUEST

As stated in the June 13 Application, the Skiffes Creek Transmission Project was expected to be completed and placed into service approximately 18-20 months after receipt of all applicable permits. With issuance of the U.S. Army Corps of Engineers’ (“Army Corps”) permit

¹⁶ December 13 Order, page 2, paragraph C.

¹⁷ December 13 Order, page 2, paragraph D.

on July 3, 2017, Dominion Energy Virginia started construction of the Skiffes Creek project on July 10, 2017. As reported on October 12, 2017, the Skiffs Creek Transmission Project is scheduled to be completed May 12, 2019.¹⁸

Thus, given the continued extended nature of the emergency, PJM respectfully submits that the emergency continues to exist as set forth in the June 13 Application, and the Renewal Applications and as determined by the Secretary in the June 16 Order, September 14 Order and November 29 Order.

Therefore, PJM respectfully requests that the Secretary grant this renewal application and order the continued operation of Yorktown Units 1 and 2 to alleviate the emergency described in the June 13 Application, and the Renewal Applications prior to the expiration of the current order (*i.e.* March 13, 2017) under Section 202 (c) of the FPA. PJM request the requested renewal order provide as follows:

- (i) that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation and transmission of electric energy and that issuance of a renewal Order will meet the emergency and serve the public interest;
- (ii) from March 14, 2017 to June 11, 2018, Dominion Energy Virginia is directed to operate Yorktown Units 1 and 2 as directed by PJM as needed to maintain grid reliability or for other local area transmission issues;

¹⁸ In accordance with the Secretary's directives, PJM will report on changes to the Skiffes Creek Transmission project construction schedule and revised outage schedules as necessary and appropriate.

- (iii) the limitations on operations ensure, to the maximum extent practicable, consistency with applicable laws and regulations, and the reporting requirements for operations and estimated emissions ensure transparency of implementation;
- (iv) consistent with the dispatch methodology submitted by PJM on June 27, 2017, good utility practice and the PJM Tariff, PJM and Dominion Energy Virginia shall exhaust all reasonably and practically available resources including demand response and identified behind-the-meter generation resources to the extent that such resources address maintenance of grid reliability, prior to operating Yorktown Units 1 and/or 2;¹⁹
- (v) Dominion Energy Virginia shall continue to follow the dispatch methodology submitted by PJM on June 27, 2017; and
- (vi) Every two weeks, PJM and Dominion Energy Virginia shall report all dates on which Yorktown Units 1 and/or 2 are operated as well as the estimated emissions and water usage date for those dates; and
- (vii) In the event that the outage schedule or estimates change from those presented in the renewal application, PJM and/or Dominion Energy Virginia shall also provide updated outages schedules and associated Yorktown Units 1 and 2 emission estimates within 2 weeks of such change.

¹⁹ See Footnote 10.

Respectfully submitted,

/s/ Steven R. Pincus

Department of Energy
Washington, DC 20585

February 27, 2018

RECORDS OF CATEGORICAL EXCLUSION DETERMINATION

Order No. 202-18-3

The National Environmental Policy Act (NEPA) requires federal agencies to prepare Environmental Impact Statements (EISs) for major federal actions significantly affecting the quality of the human environment.

The Department of Energy's (DOE's) regulations that implement NEPA (10 C.F.R. Part 1021) require it to determine whether a proposal requires that an EIS, an Environmental Assessment (EA), or a Categorical Exclusion (CX) be prepared. A CX refers to a category of actions that DOE has determined do not individually or cumulatively have a significant effect on the human environment. As such, DOE need not prepare an EA or an EIS for CX actions.

On June 13, 2017, PJM Interconnection, L.L.C. (PJM), the Regional Transmission Organization (RTO) whose service territory includes the North Hampton Roads area east of Richmond, Virginia, filed a *Request for Emergency Order Pursuant to Section 202(c) of the Federal Power Act* (FPA) with the United States DOE "to preserve the reliability of [the] bulk power electric transmission system in the North Hampton Roads area." The emergency order would require Virginia Electric and Power Company (Dominion Energy Virginia), the public utility serving the area, to operate its two coal-fired units at its Yorktown Power Station (Yorktown Unit 1 and Yorktown Unit 2) to react to electricity reliability emergencies.

On June 16, 2017, the Secretary of Energy, on behalf of the DOE, issued Order No. 202-17-2, determining that an electricity reliability emergency exists in the Commonwealth of Virginia, ordering Dominion Energy Virginia to operate Units 1 and 2 of the Yorktown Power Station from June 16, 2017 to September 14, 2017 only when called upon for electricity reliability emergency issues.

On August 24, 2017, PJM filed a *Request for reissuance of DOE Order No. 202-17-2*, with DOE "to preserve the reliability of the bulk power transmission system in the North Hampton Roads area." Reissuance of *DOE Order No. 202-17-2* would require Dominion Energy Virginia, to operate Yorktown Unit 1 and Yorktown Unit 2 to react to reliability emergencies from September 15, 2017 to December 13, 2017.

On September 14, 2017, the Secretary of Energy, on behalf of the DOE, issued Order No. 202-17-4, determining that an electricity reliability emergency exists in the Commonwealth of Virginia, ordering Dominion Energy Virginia to operate Units 1 and 2 of the Yorktown Power

Station from September 15, 2017 to December 13, 2017 only when called upon for electricity reliability emergency issues.

On November 29, 2017, PJM filed a *Request for reissuance of DOE Order No. 202-17-4*, with DOE “to preserve the reliability of the bulk power transmission system in the North Hampton Roads area.” Reissuance of *DOE Order No. 202-17-4* would require Dominion Energy Virginia, to operate Yorktown Unit 1 and Yorktown Unit 2 to react to reliability emergencies from December 14, 2017 to March 13, 2018.

On December 13, 2017, the Secretary of Energy, on behalf of the DOE, issued Order No. 202-18-2, determining that an electricity reliability emergency exists in the Commonwealth of Virginia, ordering Dominion Energy Virginia to operate Units 1 and 2 of the Yorktown Power Station from December 13, 2017 to March 13, 2018 only when called upon for electricity reliability emergency issues.

On February 20, 2018, PJM filed a *Request for reissuance of DOE Order No. 202-18-2*, with DOE “to preserve the reliability of the bulk power transmission system in the North Hampton Roads area.” Reissuance of *DOE Order No. 202-18-2* would require Dominion Energy Virginia, to operate Yorktown Unit 1 and Yorktown Unit 2 to react to reliability emergencies from March 13, 2018 to June 11, 2018.

PROPOSED ACTION: The DOE proposed Federal action would be the reissuance of DOE Order No. 202-18-2, as DOE Order No. 202-18-3, an emergency order targeted to prevent uncontrolled power disruptions and shedding of critical load in the North Hampton Roads area on the Virginia Peninsula for 90 days.

FPA section 202(c) (2) requires the Secretary of Energy to ensure that any 202(c) order that may result in a conflict with a requirement of any environmental law be limited to the “hours necessary to meet the emergency and serve the public interest, and, to the maximum extent practicable,” be consistent with any applicable environmental law and minimize any adverse environmental impacts.

BACKGROUND: In November 2011, and again in October 2012, Dominion Energy Virginia notified PJM of its plan to deactivate both units, effective December 31, 2014, because the units were not equipped to comply with the Environmental Protection Agency’s (EPA) Mercury and Air Toxics Standards (MATS), 40 C.F.R. part 63 subpart UUUUU.

By letters dated December 14, 2011 and April 11, 2014, PJM notified Dominion Energy Virginia that the deactivation of Yorktown Units 1 and 2 respectively would adversely affect the PJM transmission system absent the installation of certain transmission upgrades necessary to address the reliability impacts. PJM included the required transmission upgrade known as the Skiffes Creek Transmission Project a new 500kV transmission line across the James River as an upgrade.

PJM load flow studies indicate that generation from Yorktown Units 1 and 2 will be needed to prevent the possibility of uncontrolled power disruptions in the North Hampton Roads area or other loss of grid reliability such as the implementation of an automated controlled load shed scheme.

Dominion Energy Virginia developed, an automated controlled load shed scheme known as the Remedial Action Scheme ("RAS") or as the "North Hampton RAS" to address deactivation of the Yorktown Units. The North Hampton RAS" would result in a forced interruption of service to load on the Peninsula. During certain high load conditions, this power interruption could result in power loss effecting over 150,000 customers in the North Hampton Roads^a area of Virginia. In addition to residential customers, hospitals, nursing homes, schools, commercial, industrial, and national defense facilities would be without power during those peak load conditions on the Peninsula.

CX TO BE APPLIED: The proposed action identified above fits within the classes listed in Appendix B to Subpart D, of 10 CFR Part 1021-Categorical exclusions applicable to specific agency actions. Specifically:

B4.4 Power marketing services and activities.

Power marketing services and power management activities (including, but not limited to, storage, load shaping and balancing, seasonal exchanges, and other similar activities), provided that the operations of generating projects would remain within normal operating limits.

REGULATORY REQUIREMENT: The DOE proposed action is the reissuance of DOE Order No. 202-18-2, as DOE Order No. 202-18-3. The DOE Order reissuance will continue the operational limitations described for electricity reliability emergency issues.

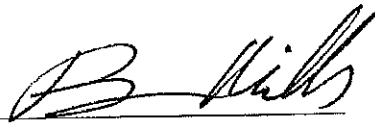

The expected combined operation of Yorktown Units 1 and 2 reacting to electricity reliability emergencies under DOE Order No. 202-18-2 will be well below normal operating capacities and limits of Yorktown Units 1 and 2.

DOE has determined that the proposed action identified above will not have a significant effect on the human environment. Authorizing the proposed action will not (1) threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health including DOE and/or Executive orders; (2) require siting of new facilities or expansion of existing facilities; (3) disturb hazardous substances, pollutants or contaminants; or (4) adversely affect environmentally sensitive resources.

DETERMINATION: Based on my review of the above information concerning the proposed action, as NEPA Compliance Officer (as authorized under DOE Order 451.1B), I have determined that the proposed action fits within the specified class of actions, other regulatory

^a The North Hampton Roads load area includes the following: Charles City County, James City County, York County, Williamsburg, Yorktown, Newport News, Poquoson, Hampton, Essex County, King William County, King and Queen County, Middlesex County, Mathews County, Gloucester County, the City of West Point, King George County, Westmoreland County, Northumberland County, Richmond County, Lancaster County, and the City of Colonial Beach.

requirements set forth above are met, and the proposed action is hereby categorically excluded from further NEPA review.

March 16, 2017

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

Re: Report on Yorktown Units 1 and 2 Revised Outage Schedule - Order No. 202-18-3

Dear Secretary Perry:

Pursuant to Order No. 202-18-3 (the "Renewal Order") issued March 13, 2018, by the Secretary of Energy ("Secretary"), PJM Interconnection, L.L.C. ("PJM") and Virginia Electric and Power Company ("Dominion Energy Virginia") respectfully submit the attached Skiffes Creek Construction Transmission Outage Schedule and Yorktown Units 1 and 2 Emission Estimates as of March 12, 2018 ("March 2018 Outage Schedule"). This submission is in accordance with the Secretary's directive that PJM and Dominion Energy Virginia provide updated outage schedules and associated Yorktown Units 1 and 2 emission estimates in the event the schedule or emission estimates change from those presented in the PJM Renewal Application Filing dated February 20, 2018 ("Renewal Application") within two weeks of the change.¹

In the Renewal Application, PJM explained that construction of the Skiffes Creek Transmission Project began in July 10 2017 and was expected to take approximately 18-20 months.² As reported on October 12, 2017, the Skiffs Creek Transmission Project was scheduled to be completed May 12, 2019.³ The October 2017 Outage Schedule included a Skiffes Creek construction schedule and planned transmission outage sequence, and Yorktown run and emission estimates. The schedule also provided actual emissions from the Yorktown unit runs as directed by PJM, the current estimated planned

¹ Renewal Order at 2.

² Renewal Application at 6-7.

³ Report on Yorktown Units 1 and 2 Revised Construction Schedule ("October 2017 Outage Schedule").

transmission outage time frames, transmission limiting contingencies, Dominion Zone load thresholds which trigger the need to operate Yorktown Units 1 and/or 2, estimated run time in days, and Dominion Energy Virginia's estimated emissions based on the run time estimates. The Renewal Application explained that PJM and Dominion Energy Virginia would provide DOE with revised construction schedules and estimated emissions.⁴

In the Renewal Order, the DOE determined that an emergency exists due to the shortage of electric energy and the shortage of facilities for the generation and transmission of electric energy.⁵ The Secretary found the issuance of the Renewal Order is necessary to address the emergency and serve the public interest in the North Hampton Roads area.⁶ The Renewal Order also directed PJM and Dominion Energy Virginia to provide an updated outage schedule and associated Yorktown Units 1 and 2 emission estimates in the event the outage schedule or emission estimates change from those presented in the PJM Renewal Application within two weeks of the change.⁷

The attached March 2018 Outage Schedule includes a revised construction schedule and planned transmission outage sequence, and Yorktown run and emission estimates. The March 2018 Outage Schedule extends the October 2017 Outage Schedule by 3 days (from May 12, 2019 to May 15, 2019) for the planned transmission outages associated with Skiffes Creek transmission project that may require Yorktown 1 & 2 units to run. The revised schedule also adds an estimated additional 28 run days for the dispatch of the Yorktown units for reliability. The Skiffes Creek transmission project is currently estimated to be complete by August 21, 2019, but under the revised schedule PJM is not expected to dispatch the units after May 15, 2019.

The planned transmission outages are coordinated between PJM and Dominion Energy Virginia to ensure the reliability of service in the area and to support the Skiffes Creek construction schedule. After numerous consultations between PJM and Dominion Energy Virginia, the construction schedule,

⁴ Renewal Application at 7, footnote 18.

⁵ Renewal Order at 1.

⁶ Renewal Order at 1.

⁷ Renewal Order at 2.

the transmission outage schedule, and the estimated run days were revised due to complications encountered in the construction of the Skiffes Creek transmission project. A one month delay to the Skiffes Creek construction schedule was initially proposed due to a manufacturer's defect in the Y Clevis which holds the wire to the insulator used on the line rebuild sections. A failure of the Y Clevis could result in the wire dropping from the transmission tower. With the manufacturer's help Dominion Energy Virginia identified the defect parts and replaced them, however the work required climbing each structure and replacing this part on all three phases. Also, several additional transmission towers will need to be replaced that were not in the original plan due to deterioration found in the field. These additional construction delays pushed the outages of the 292 and 285 lines to peak loading periods which created operational concerns. Therefore, PJM and Dominion Energy Virginia agreed to rearrange the construction schedule and the outage schedule to minimize the impact of transmission outages of the 285 line during the 2018 summer peak and the 2019 winter peak periods. This resulted in an estimated additional 28 run days for the dispatch of the Yorktown units for reliability and rearranging certain transmission outages. While under the revised schedule PJM is not expected to dispatch the units after May 15, 2019, construction of the Skiffes Creek transmission project has been extended and is currently estimated to be complete by August 21, 2019.

The March 2018 Outage Schedule provides actual emissions from the July 2017, August 2017, and January 2018 Yorktown unit runs. The schedule also shows the current estimated planned transmission outage time frames, transmission limiting contingencies, Dominion Zone load thresholds which trigger the need to operate Yorktown Units 1 and/or 2, estimated run time in days, and Dominion Energy Virginia's estimated emissions for the remainder of the schedule based on the run time estimates.

The construction schedule may change again. PJM and Dominion Energy Virginia will provide an updated outage schedule and associated Yorktown Units 1 and 2 emission estimates in the event the outage schedule or emission estimates changes as directed by the Renewal Order.

REQUEST FOR CEI DESIGNATION

The filing includes the following attachments:

1. Non Public version of Creek Construction Transmission Outage Schedule and Yorktown Units 1 and 2 Emission Estimates as of March 12, 2018 (password protected containing Critical Energy Infrastructure (“CEII”) material); and

2. Public version of Creek Construction Transmission Outage Schedule and Yorktown Units 1 and 2 Emission Estimates as of March 12, 2018 (public version with CEII material redacted).

In regard to the Non Public version, PJM and Dominion Energy Virginia respectfully requests the transmission outage and limited contingency information submitted to the DOE be designated as CEII pursuant Federal Power Act (“FPA”) Section 215A(d) and the implementing regulations, 18 C.F.R. Section 388.113.

In Fixing America's Surface Transportation Act (“FAST”) Section 215A(a)(3), CEII is specifically defined as information “designated as critical electric infrastructure information by ... the Secretary of the Department of Energy pursuant to subsection (d).”⁸ Under FPA Section 215A(a)(3), CEII includes information that is submitted to the DOE, and designated as such by DOE.⁹ The regulations define CEII in pertinent part as follows:

“1) Critical electric infrastructure information means information related to critical electric infrastructure ... Provided to the Commission or other Federal agency ... that is designated as critical electric infrastructure information by the Commission or the Secretary of the Department of Energy pursuant to section 215A(d) of the Federal Power Act. Such term includes information that qualifies as critical energy infrastructure information under the Commission's regulations. Critical Electric Infrastructure Information is exempt from mandatory disclosure under the Freedom of Information Act, 5 U.S.C. 552(b)(3) and shall not be made available by any Federal, State, political subdivision or tribal authority pursuant to any Federal, State, political subdivision or tribal law requiring public disclosure of information or records pursuant to section 215A(d)(1)(A) and (B) of the Federal Power Act.”

2) Critical energy infrastructure information means specific engineering, vulnerability, or detailed design information about ... existing critical infrastructure that:
(i) Relates details about the production, generation, transportation, transmission, or distribution of energy;
(ii) Could be useful to a person in planning an attack on critical infrastructure;
(iii) Is exempt from mandatory disclosure under the Freedom of Information Act, 5 U.S.C. 552; and

⁸ FAST Act, Pub. L. No. 114-94, section 61,003, 129 Stat. 1312, 1776.

⁹ FAST Act, Pub. L. No. 114-94, section 61,003, 129 Stat. 1312, 1773 (“critical electric infrastructure information means information ... generated by or provided to the Commission or other Federal agency ... that is designated as critical electric infrastructure information by the Commission or the Secretary pursuant to subsection (d)”).

(iv) Does not simply give the general location of the critical infrastructure.”¹⁰

PJM and Dominion Energy Virginia submits the redacted information is CEII because it provides details about the production, generation and transportation of energy, which if publically available could be useful in planning an attack on critical infrastructure in the North Hampton Road area of the Commonwealth of Virginia, namely the electric transmission system.

Respectfully submitted,

/s/ Michael C. Regulinski

Subject: Yorktown Units Test Run Report: DOE Order 202-18-3
Date: Wednesday, April 25, 2018 3:43:43 PM
Attachments: DOE Report April Yorktown Run April 11 test run.pdf
Yorktown Bi-Weekly Hourly Emissions Data.pdf
YT12 Intake Circulating Water Usage.pdf

Dear Secretary Perry:

PJM Interconnection, LLC and Virginia Electric and Power Company, dba Dominion Energy Virginia, respectfully submit the following in compliance with Order No. 202-18-3:

1. Report on Yorktown Units 1 and 2 Test Run.

Please contact me if you have any questions.

Michael C. Regulinski

Managing General Counsel

Dominion Energy Services, Inc.

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

Re: Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-18-3

Dear Secretary Perry:

Pursuant to Order No. 202-18-3 (the "Order") issued March 13, 2018 by the Secretary of Energy ("Secretary"), PJM Interconnection, L.L.C. ("PJM") and Virginia Electric and Power Company ("Dominion Energy Virginia") respectfully submits the attached report regarding a test run of Yorktown Units 1 and 2 on April 11, 2018 in accordance with the Secretary's directive to "report all dates on which Yorktown Units 1 and 2 are operated as well as the estimated emissions and water usage data associated with their operations."¹

In the PJM application submitted June 13, 2017 (incorporated by reference in the PJM February 28 Renewal Application), PJM explained that emissions from the plant would occur at times outside of periods where PJM dispatches the Yorktown units for reliability.² These times include basic and periodic maintenance activities, and compliance related activities, undertaken to ensure the units remain reliable and capable of operating when necessary. These activities are consistent with normal operating procedures and good engineering practices, and include operating equipment for maintenance testing and reliability check out, testing of fuel systems, tuning of units, required emissions or operational testing, and

¹ Order at page 2. The Order is for the period March 14 to June 11, and directs the emission report to be submitted every two weeks. April 25 is the end of the third two week period.

² PJM Application at page 13, incorporated by reference in the February 28 PJM Renewal Application at page 1.

other operating procedures. Without performing these activities Dominion Energy Virginia may not be prepared to run the Yorktown Units when directed by PJM to ensure system reliability.

On April 11, for approximately 7 hours, Dominion Energy Virginia tested equipment on the Yorktown Units as part of an effort to ensure reliability of these two units when called upon by PJM to provide grid stability. This testing included running sub-systems and firing of ignitors and warm up burners to functionally test and verify operation for start-up. Dominion Energy Virginia did not fire the boiler for any extended period but just long enough to cycle through all the ignitors and warm up the burners. Dominion Energy Virginia tests each unit individually; the first run was the unit 1 reliability test and the second run was the unit 2 reliability test run. The two tests differed in duration due to troubleshooting of equipment issues for the start-up as well as working through some opacity issues that is commonplace when a boiler sits for a period of time and ash settles in the ductwork. The Yorktown generators did not generate any power transmitted to the grid during the test.

Dominion Energy Virginia plans for testing the units depends on whether PJM dispatches the units and they operate. If PJM dispatches the units and they run, Dominion Energy Virginia plans on conducting these tests 2-1/2 to 3 months after the last run.

Attachment 1 to this report is the Yorktown Power Station Bi-weekly Emissions Data for April 3 to April 16 that shows the actual runtime and air emissions data for the period in pounds per hour and total tons for NO_x, SO₂, CO₂, PM₁₀, lead, mercury, HCl, and HF. This spreadsheet includes hourly runtime data for the equipment for the Yorktown units, and raw and calculated data showing emissions data associated with operations of the equipment. Pounds per million Btu and pounds per trillion Btu calculations are not provided with this submittal as these values would not be meaningful for the limited hours of run time observed during this period.

NO_x and SO₂ emissions are based on valid hours of Continuous Emissions Monitoring System (CEMS) data for the period. PM-10 emissions are based on the emission factor derived from the July 21, 2017 stack test (0.0168 lbs/mmBtu corrected to 0.1143 lbs/mmBtu calculated for PM-10 filterable plus condensable). CO₂ emissions are based on valid CEMS hours for the operating period. All other

emissions were calculated using emission factors from AP-42, Fifth Edition, Volume 1, Chapter 1: External Combustion Sources and calculated hourly coal consumption in tons.³

Attachment 2 of this report is entitled "Yorktown Power Station April 11 Circulating Water Usage." This report provides the intake circulating water usage for the test of the Yorktown units.

PJM and Dominion Energy Virginia respectfully submits the information in this report be accepted by the Secretary as compliant with the Order's directives to report all dates on which Yorktown Units 1 and 2 are operated well as the estimated and actual emissions and water usage data associated with their operations.

Respectfully submitted,

/s/ Michael C. Regulinski

³ Mercury and lead emissions were calculated using AP-42, Table 1.1-18. CO emissions were calculated using emission factors from AP-42, Table 1.1-3. Total HAP metals and individual HAP metals are not provided because MATS Table 2 (40 CFR 63, Subpart UUUUU) provides for compliance with either the PM limit or total non-mercury HAP metals limits or individual HAP metals. Dominion Energy Virginia is providing PM-10 emissions for the purposes of MATS. HCl and HF emissions were calculated using emission factors from AP-42, Table 1.1-15.

The Honorable James Richard Perry
Secretary of the Energy
United States Department of Energy
1000 Independence Ave, SW
Washington, DC 20585

Re: Report on Yorktown Units 1 and 2 Operations Pursuant to Order No. 202-18-3

Dear Secretary Perry:

Pursuant to Order No. 202-18-3 issued on March 13, 2018 (the "Order") by the Secretary of Energy ("Secretary"), PJM Interconnection, L.L.C. ("PJM") and Virginia Electric and Power Company ("Dominion Energy Virginia") respectfully submit the attached air emissions report regarding PJM's dispatch of Yorktown Units 1 and 2 from May 2 through May 5, 2018, including the periods needed to startup and ramp down the units. This report is submitted in accordance with the Secretary's directive that every two weeks PJM and Dominion are to "report all dates between March 13, 2018 and June 11, 2018, on which Yorktown Units 1 and/or 2 are operated, and the associated air emissions and water usage data for those dates."¹

In the Order, the Secretary determined "that an emergency continues to exist in the North Hampton Roads area of Virginia due to a shortage of electric energy and a shortage of facilities for the generation of electric energy." The Secretary found that the issuance of this Order will meet the emergency and serve the public interest as required by Federal Power Act Section 202(c)² In doing so, the Secretary directed Dominion Energy Virginia to operate Yorktown Units 1 and/or 2 as directed by PJM only as needed to ensure grid reliability for a 90-day period March 13, 2018 through June 11, 2018.³

On May 1 at approximately 08 hundred hours, PJM directed Dominion Energy Virginia to have Yorktown Unit 2 available the next day, and Dominion Energy Virginia began the startup process and the unit was on line and generating power on May 2 at 18 hundred hours. On May 2 at approximately 05

¹ Order at page 2.

² Order at page 1.

³ Order at page 2.

hundred hours, PJM directed Dominion Energy Virginia to have Yorktown Unit 1 available the next day, and Dominion Energy Virginia began the startup process and Unit 1 was on line and generating power on May 3 at 15 hundred hours. PJM dispatched both units off line at approximately 00 hundred hours on May 5, and Dominion Energy Virginia took the units offline at about 02 hundred hours on May 5.

Attachment 1 to this report is the Yorktown Power Station Bi-Weekly Mass Emissions for April 23 through May 6 that shows the actual runtime and air emissions data. This spreadsheet includes hourly runtime data for Yorktown Unit 2, hourly gross Megawatt (MW) outputs, and raw and calculated data showing air emissions data associated with operations of Yorktown Unit 2.⁴

The information in Attachment 1 reports Yorktown Unit 2 hourly emissions of PM-10 and SO₂ in pounds per hour and pounds per million BTU, and mercury in pounds per hour and pounds per trillion BTU (Mercury and Air Toxics Standards (MATS) format) for the operating period beginning December 6, 2017 through January 8, 2018. Additionally, Attachment 1 provides Unit 2 hourly emissions of NO_x in pounds per hour, greenhouse gases (as CO₂) in tons per hour, lead in pounds per hour, HCl in pounds per hour, HF in pounds per hour, and CO in pounds per hour. NO_x and SO₂ emissions are based on valid hours of Continuous Emissions Monitoring System (CEMS) data for the period. PM-10 emissions are based on the emission factor derived from the July 21, 2017 stack test (0.0168 lbs/mmBtu corrected to 0.1143 lbs/mmBtu calculated for PM-10 filterable plus condensable). CO₂ emissions are based on valid CEMS hours for the operating period. All other emissions were calculated using emission factors from AP-42, Fifth Edition, Volume 1, Chapter 1: External Combustion Sources and calculated hourly coal consumption in tons.⁵

⁴ The Yorktown units can emit pollution while not generating MWs (*e.g.* during standby, startup and shutdown sequences). Thus, Attachment 1 shows the MW output during the period Yorktown Units 1 and 2 provided power to the grid including startup and shutdown processes and it shows the emissions data for operations of the Units including times when the unit was not generating power.

⁵ Mercury and lead emissions were calculated using AP-42, Table 1.1-18. CO emissions were calculated using emission factors from AP-42, Table 1.1-3. Total HAP metals and individual HAP metals are not provided because MATS Table 2 (40 CFR 63, Subpart UUUUU) provides for compliance with either the PM limit or total non-mercury HAP metals limits or individual HAP metals. Dominion Energy Virginia is providing PM-10 emissions for the purposes of MATS. HCl and HF emissions were calculated using emission factors from AP-42, Table 1.1-15.

Attachment 2 to this report is the Yorktown May 2-5 Circulating Water Usage report for the Yorktown Units 1 and 2 operations required by the Order. Operation of cooling water pumps extends over a period of time longer than unit operation to facilitate cooling of plant components that support the boiler and turbine. As a general rule cooling water will continue to be pumped until the turbine metal temperature is less than 300 °F. However, sometimes additional cooling water is necessary to complete proper cool down of auxiliary equipment and lubrication fluids after the turbine metal reaches 300 °F, as was the case with the Yorktown Units 1 and 2 operations in May. As shown in Attachment 2, water continued to be circulated through Unit 1 until approximately 21 hundred hours on May 6, and until approximately 15 hundred hours on May 8 for Unit 2.

PJM and Dominion Energy Virginia respectfully submits the information in this report be accepted by the Secretary as compliant with the Order's directives to report all dates on which Yorktown Units 1 and/or 2 are operated between March 13 and June 11, 2018 as well as the associated air emissions and water usage associated with their operations.

Respectfully submitted,

/s/Michael C. Regulinski

VIA COURIER

The Honorable James Richard Perry
Secretary of Energy
United States Department of Energy
1000 Independence Avenue, S.W.
Washington, DC 20585

Re: Request for Emergency Order Pursuant to Federal Power Act Section 202(c)

Dear Secretary Perry:

Pursuant to Section 202(c) of the Federal Power Act ("FPA"),¹ Section 301(b) of the Department of Energy ("DOE") Organization Act,² and certain of the DOE's Rules of Practice and Procedure,³ FirstEnergy Solutions Corp. ("FirstEnergy Solutions"), on behalf of its named subsidiaries ("Applicants"),⁴ respectfully requests that the Secretary of Energy ("Secretary") find that an emergency condition exists in the footprint of the PJM Interconnection, L.L.C. ("PJM") that requires immediate intervention by the Secretary, in the form of a Section 202(c) emergency order directing: (a) certain existing nuclear and coal-fired generators in PJM,⁵ as detailed herein, to enter into contracts and all necessary arrangements with PJM, on a plant-by-plant basis, to generate, deliver, interchange, and transmit electric energy, capacity, and ancillary services as needed to maintain the stability of the electric grid and (b) PJM to promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide to energy markets and the public at large, including fuel security and diversity, as detailed herein.

PJM has done little to prevent this emergency despite the numerous signs for many years that the emergency was coming. Nuclear and coal-fired generators in PJM have been closing at a rapid rate⁶ putting PJM's system resiliency at risk and many more closures have been

¹ 16 U.S.C. § 824a(c).

² 42 U.S.C. § 7151(b).

³ 10 C.F.R. §§ 205.370-205.373.

⁴ The named subsidiaries are: FirstEnergy Generation, LLC, FirstEnergy Nuclear Generation, LLC, FirstEnergy Nuclear Operating Company, and FirstEnergy Generation Mansfield Unit 1 Corp. The foregoing entities are all wholly owned subsidiaries of FirstEnergy Solutions Corp. which, in turn, is a wholly owned subsidiary of FirstEnergy Corp., a publicly-traded, utility holding company headquartered in Akron, Ohio.

⁵ A list of the nuclear and coal-fired generating plants in PJM believed to be currently operating is provided as Attachment A hereto. As explained in Section II.F, only a subset of these plants would be subject to the requested Order.

⁶ In the past four years, over 11,000 MW of coal-fired generation within the PJM footprint has closed, the equivalent of a dozen large power plants. MONITORING ANALYTICS, LLC, 2017 STATE OF THE MKT. REPORT FOR

announced.⁷ PJM continues to claim that all is well with its system,⁸ but at the same time shows it does not have a clear view of what resilience is, how to measure it, or how to ensure it.⁹ PJM has demonstrated little urgency to remedy this problem any time soon¹⁰ so immediate action by the Secretary is needed to alleviate the present emergency.

I. BACKGROUND AND SUMMARY

It is in the national interest to ensure a dependable, affordable, safe, fuel-secure, and clean supply of electricity produced by a diverse array of energy resources, including coal, natural gas, nuclear material, flowing water, and renewable resources. Such diversity of generation enhances dependable and resilient electric supply, reduces electricity price volatility, ensures the Nation's economic and physical security, and promotes economic development. As you stated recently, "America's greatness depends on a reliable, resilient electric grid powered by an 'all of the above' mix of generation resources" that "must include traditional baseload generation with on-site fuel storage that can withstand major fuel supply disruptions caused by natural and man-made disasters."¹¹ Indeed, "[o]ur economy, government and national defense all depend on electricity. Therefore, ensuring a reliable and resilient electric supply and corresponding supply chain are vital to national security."¹²

PJM, VOL. 2: DETAILED ANALYSIS 544 tbl.12-5 (Mar. 8, 2018), (listing coal unit retirements of 2,239 MW, 7,064.8 MW, 243 MW, and 2,038 MW in 2014, 2015, 2016, and 2017, respectively) http://www.monitoringanalytics.com/reports/PJM_State_of_the_Market/2017.shtml ("2017 PJM Report").

⁷ See Section II.B, *infra*.

⁸ See, e.g., Comments and Responses of PJM Interconnection, L.L.C. at 4, *Grid Resilience in Regional Transmission Organizations and Independent System Operators*, FERC Docket No. AD18-7-000 (Mar. 9, 2018) ("To be clear, the PJM [Bulk Electric System ("BES")] is safe and reliable today – it has been designed and is operated to meet all applicable reliability standards. However, improvements can and should be made to make the BES more resilient against known and potential vulnerabilities and threats. In many cases, resilience actions are anchored in, but go beyond what is strictly required for compliance with, the existing reliability standards.") ("PJM Comments"); Initial Comments of PJM Interconnection, L.L.C. on the United States Department of Energy Proposed Rule at 25, *Grid Reliability and Resilience Pricing*, FERC Docket No. RM18-1 (Oct. 23, 2017) ("[T]he performance of the PJM system in response to incredibly taxing events like the 2014 Polar Vortex demonstrate the reliability and resilience of the system created by effective transmission planning and development and the energy and capacity markets.").

⁹ See, e.g., PJM Comments at 3-4. *Contrast* Response of the New York System Operator, Inc. at 1, *Grid Resilience in Regional Transmission Organizations and Independent System Operators*, FERC Docket No. AD18-7-000 (Mar. 9, 2018) (referring to "efforts already underway (or being considered) to ensure continued reliable operation and bolster resiliency in response to the evolving nature of the bulk power system in New York").

¹⁰ PJM indicates that it will follow any FERC mandate to study the resiliency issue and, *if* changes are needed, pursue solutions. PJM Comments at 5-6. But the emergency exists presently, not in the future, and immediate action is needed *now*, not more time to study.

¹¹ Letter from Rick Perry, U.S. Sec'y of Energy, to Chairman & Comm'rs of FERC at 1 (Sept. 28, 2017) ("Secretary NOPR Letter").

¹² *Id.* at 2.

The Nation depends heavily on a steady and dependable supply of electricity at all times. Electricity both figuratively and literally powers the Nation—its homes, its businesses, its industries, government buildings, and defense installations. Electricity is thus vital not only to the health, safety, and welfare of the Nation, but also to its economic and physical well-being. Our adversaries understand this too. As explained by Dr. Paul Stockton, former Assistant Secretary of Defense, the Nation's adversaries "may seek to disrupt U.S. defense capabilities by attacking the critical infrastructure on which our military bases rely. . . . The power grid and fuel supplies for power generation are potential targets for these adversaries."¹³ The importance of the electric grid and its fuel supply network to our Nation's well-being cannot be overstated.

Yet, as DOE is undoubtedly aware, threats to the Nation's power supply and grid are real and can no longer be ignored. The Nation's security is jeopardized if DOE does not act now to preserve fuel-secure generation and the diversity of supply.¹⁴ The very diversity of supply that baseload nuclear and coal-fired units provide is being lost more and more each day as more and more of these plants retire because their fuel security and resiliency are not properly recognized and valued by the current administrative market rules. Rather, we, as a Nation, "need to properly recognize the value of each resource, being mindful of its role in our national defense [and] economic security" and, in this regard, "account for the value of on-site fuel storage capability" of nuclear and coal-fired generating resources.¹⁵ To this effect, immediate action is needed to ensure that such traditional baseload generation receives compensation commensurate with the value it provides to the Nation and thus remains in service and available to power the Nation in times of need. As you have noted, "urgent action must be taken to ensure the resilience and security of the electric grid, which is so vitally important to the economic and national security of the United States."¹⁶

The recent cold weather in the East has provided a real-time, real-life demonstration as to why immediate action is so critical to ensure the health and safety of the Nation. From December 27, 2017, through January 8, 2018, the eastern U.S. saw extremely cold temperatures and spiking electric demand, which would likely have been far worse had it occurred only two weeks later after the holiday season ended. If not for the over-performing nuclear and coal-fired generating plants in PJM,¹⁷ the eastern portion of the country would likely have seen grid reliability impacts,

¹³ Comments of Exelon Corp., Testimony of Paul Stockton at 5-6, *Grid Reliability and Resilience Pricing*, FERC Docket No. RM18-1-000 (Oct. 23, 2017).

¹⁴ Secretary NOPR Letter at 8 ("If, for example, we lose our educated workforce or no longer have the ability to build and operate our baseload plants because of short-sighted policies, it will not only weaken our workforce, but will threaten our energy dominance and national security.").

¹⁵ *Id.*

¹⁶ Letter from Rick Perry, U.S. Sec'y of Energy, to Kevin McIntyre, Chairman, FERC at 2 (Dec. 8, 2017) ("Secretary Extension Letter").

¹⁷ See, e.g., Tim Loh, Chris Martin & Naureen S. Malik, *America's Deep Freeze is Aiding Coal and Sending Power Up*, BLOOMBERG (Dec. 28, 2017), <https://www.bloomberg.com/news/articles/2017-12-28/america-s-deep-freeze-is-aiding-coal-and-sending-power-surging> ("In the PJM market . . . coal has once again surged past natural gas to become the biggest fuel for power generation."); Tiffany Hsu, *Deep Freeze in U.S. Creates Heating Squeeze for Homeowners and Utilities*, N.Y. TIMES (Jan. 3, 2018).

as natural gas plants significantly underperformed in large part due to natural gas price spikes and supply interruptions.¹⁸ As a recent DOE study of this cold weather event found (the “NETL Report”), nuclear and coal-fired generation provided 70 percent of output during the event and “coal units in PJM were uniquely positioned to provide the resilience needed at this critical point in time,” providing “74 percent of incremental energy.”¹⁹ The study went on to conclude that:

In the case of PJM, it can also be shown that the demand could not have been met without coal. At peak demand, January 5, 2018, natural gas prices exceeded \$95/MMBtu in eastern PJM. Had coal been removed, a 9-18 GW capacity shortfall would have developed, depending on assumed imports and generation outages, leading to system collapse.²⁰

As the report stated, “[e]xperience with such blackouts indicates the potentially enormous toll in both economic losses and human suffering associated with widespread lack of electricity.”²¹

<https://www.nytimes.com/2018/01/03/business/heating-homeowners-winter.html> (noting that due to high heating demand, “[m]any utilities turned to coal and oil to generate electricity as the price of natural gas, their usual fuel of choice, surged”); Jeremiah Shelor, *Extreme Cold Drives Record-Setting Week in NatGas Cash; Futures See Warm-Up Ahead*, NATURAL GAS INTELLIGENCE (Jan. 5, 2018), <http://www.naturalgasintel.com/articles/112977-extreme-cold-drives-record-setting-week-in-natgas-cash-futures-see-warm-up-ahead> (“With blizzard conditions arriving late in the week along the East Coast just in time to pile on after recent bitterly cold temperatures, natural gas spot price blowouts ran rampant The conditions driving the exorbitant cash prices appeared to be a perfect storm of widespread weather-driven demand and pipeline constraints.”); PJM INTERCONNECTION, PJM COLD SNAP PERFORMANCE DEC. 28, 2017 TO JAN. 7, 2018 13 & fig.10 (Feb. 26, 2018), *available at* <http://www.pjm.com/-/media/library/reports-notice/weather-related/20180226-january-2018-cold-weather-event-report.ashx> (reporting that nuclear and coal generation combined constituted 63% of the online fuel mix during the 2018 cold snap) (“PJM COLD SNAP PERFORMANCE 2018”).

¹⁹ NAT’L ENERGY TECH. LAB., RELIABILITY, RESILIENCE AND THE ONCOMING WAVE OF RETIRING BASELOAD UNITS VOLUME I: THE CRITICAL ROLE OF THERMAL UNITS DURING EXTREME WEATHER EVENTS 12 (Mar. 13, 2018) (“NETL Report”), *available at* <https://www.netl.doe.gov/research/energy-analysis/search-publications/vuedetails?id=2594>. To the extent necessary, Applicants incorporate the NETL Report by reference as if it were filed in full as an attachment to this Application. The findings in the NETL Report fully support the Secretary determining that an emergency exists within the meaning of FPA Section 202(c) that warrants immediate action.

²⁰ *Id.* at 17 (emphasis added).

²¹ *Id.* at 3.

Overall, DOE estimated that “the value of [coal- and oil-]based power generation resilience” in PJM during this cold weather event was \$3.5 billion.²²

But this is not the first time nuclear and coal-fired generation has saved PJM. In January 2014, a “Polar Vortex” spiked customer demand, dropping system reserves in PJM to just 500 MW (on a demand of over 140,000 MW).²³ PJM calculated that 9,300 MW of generation was unavailable during this event due to interruptions in the natural gas supply to generators.²⁴ While this loss of generating capacity could have been catastrophic, multiple coal-fired generating units slated for retirement were dispatched to meet electric demand²⁵ and nuclear generators also “performed extremely well.”²⁶ “Sixty-five million people within the PJM footprint could have been affected if these traditional baseload units were not available.”²⁷

Combined, the Polar Vortex and this past winter’s extreme cold have shown the value that nuclear and coal-fired generators bring to the electric grid. Just as temperatures plummeted during these periods, the output of nuclear and coal-fired generators spiked. Specifically, during the period December 26, 2017, through January 6, 2018, coal-fired and nuclear generation in PJM averaged output levels of 46,038 MW and 35,485 MW, respectively.²⁸ These levels are over 50 percent greater than the average output of coal-fired generation during the 24 months ending September 2017 (of 29,849 MW) and over 10% greater than the average output of nuclear generation during those 24 months (of 32,167 MW).²⁹ Further, the output levels of coal-fired generators over this 12-day period are well above historical January levels, which tend to see the highest average outputs of such units of any months of the year.³⁰ By any measure, the output of coal-fired and nuclear generating facilities in PJM was exceptional over these recent 12 days.

³⁰ Specifically, during the three Januarys from 2015 to 2017, coal-fired generation in PJM averaged output of 37,234 MW (and nuclear generation averaged 34,845 MW). *See id.*

The chart below illustrates the spike in nuclear and coal-fired output over this period.³¹ Notably, coal- and oil-fired generation spiked, and nuclear generation rose materially, but gas-fired generation dropped, not only from its average output levels but even from levels seen only a few days prior. As Andrew Ott, PJM's President and CEO, recently testified:

[D]uring this recent cold weather event, obviously more than half of the total supply was coal and nuclear. Certainly, [PJM] couldn't survive without gas; [PJM] couldn't survive without coal; [PJM] couldn't survive without nuclear. [PJM needs] them all in the moment. And I think the key, and what [PJM is] focused on, is each of these bring to the table reliability characteristics. Each of these was online when [PJM] needed them.³²

The strong performance of the nuclear and coal-fired units in PJM was a needed counterbalance to the situation for gas-fired units. Specifically, during the cold snap, dramatic price increases were seen in natural gas prices; including for example a spike in PJM at the Texas Eastern M3 interface, in Southeastern Pennsylvania, from a normal level near \$3/MMBtu to \$96/MMBtu.³³ Further, "in eastern PJM . . . gas and electric transmission were severely constrained, leading to . . . elevated natural gas and electricity prices across [the] region."³⁴ The price increases would have been even more dramatic but for the over performance of nuclear and coal-fired units.

³¹ See *Generation by Fuel Type*, PJM INTERCONNECTION, http://dataminer2.pjm.com/feed/gen_by_fuel. This chart excludes March 29, March 30, and April 2, 2017 because no data was reported for those dates.

PJM Average Hourly Output By Fuel Type (MW)

But the very same nuclear and coal-fired power plants that allowed PJM to maintain reliability during these extreme weather events are at imminent risk of permanent closure if something is not done *now*. The Energy Information Administration “projects 41 GW of coal and 10 GW of nuclear retirements by 2025,” but, as the NETL Report notes, this projection does not “adequately capture[] the risk” of retirements.³⁵ The report further projects that “as much as 75 GW of coal-fired generation could be retired” by 2025, and notes that another source estimates between “30 and 50 GW of nuclear could face retirement.”³⁶ Without these plants, thousands if not millions of customers could have been without power during sub-zero degree temperatures. And absent immediate and decisive action by DOE, the 11,000 MW of nuclear and coal-fired generation that have kept PJM operating during this period will begin to retire *in the very near future*. As Andrew Ott, PJM’s President and CEO, recently testified, 1,410 MW of nuclear capacity and 3,688 MW of coal-fired capacity that operated during the recent cold snap in the eastern U.S. are scheduled to deactivate within the next five years.³⁷ This testimony is consistent with the NETL Report’s finding that:

The 30 GW of coal that ramped up to meet the surge in PJM load [during the recent cold weather event] clearly includes the units most likely to retire due to insufficient market support, given those units were not running at baseload levels before the event. As more of

³⁷ U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Mike Lee (Jan. 23, 2018).

these units retire, the ability of the system to respond to extreme events with reliance, let alone economically, deteriorates.³⁸

Further, it is a matter of public record that FirstEnergy Solutions, which through Applicants indirectly owns 12,300 MW of generation, likely will file for bankruptcy by the end of March 2018.³⁹ Indeed, Charles Jones, CEO of FirstEnergy Corp., recently stated that he would be “shocked” if FirstEnergy Solutions did not file soon.⁴⁰ FirstEnergy Solutions already submitted notice to PJM that it would deactivate its nuclear assets—Davis-Besse and Perry in Ohio and Beaver Valley in Pennsylvania—in 2020 and 2021.

“Distorted price signals” in the organized markets overseen by the Federal Energy Regulatory Commission (“FERC”), such as PJM, “have resulted in under-valuation of grid reliability and resiliency benefits provided by traditional baseload resources, such as [those powered by] coal and nuclear” fuel.⁴¹ As you have recognized, “[b]ecause wholesale pricing in those markets does not adequately consider or accurately value those benefits, generation units that provide the benefits are often not fully compensated for them.”⁴² The NETL Report similarly summarized the problem: “Markets do not currently compensate resilience, and thus that capability is steadily diminishing due to competitive pressures of ongoing, baseload power plant early retirements.”⁴³

This lack of appropriate compensation, among other things, has resulted in the Nation’s nuclear and coal-fired generation closing at an alarming and unprecedented rate. For example “between 2002 and 2016, 531 coal[-fired] generating units representing approximately 59,000 MW of generation capacity retired from the U.S. generation fleet.”⁴⁴ In addition, “[i]t is anticipated that approximately 12,700 MW of coal[-fired generation] will retire through 2020.”⁴⁵ Further, “between 2002 and 2016, 4,666 MW of nuclear generating capacity was announced for

retirement” and “[e]ight reactors representing 7,167 MW of nuclear capacity . . . have announced retirement plans since 2016.”⁴⁶

These retirements must stop immediately in PJM lest the grid be placed at risk of failure through a lack of generation diversity and over-reliance on generating units that lack secure fuel supply and often compete with other industries and customers for limited firm fuel delivery capabilities. As your staff found, “fuel supply chain disruptions can impact many generators during a single widespread fuel shortage event,” but “[n]uclear and coal[-fired power] plants typically have advantages associated with onsite fuel storage. . . .”⁴⁷ Such generating units with on-site storage capacity kept PJM from shedding load during the 2014 Polar Vortex when available generating capacity was only a hair’s width more than demand. And such units have been critical to keeping the grid supplied during the severe cold weather in the East this past winter. But the continued existence of such fuel-secure, baseload units cannot be taken for granted. Unless immediate action is taken, they will continue to retire and PJM and the Nation are likely not to be so lucky as to avoid load-shedding (or worse) the next time generation supply is stretched to its limit.

FERC has for several years failed to heed this warning and to act to prevent this impending crisis. Indeed, FERC has had the opportunity to prevent this crisis on numerous occasions, including the opportunity you provided it through your Notice of Proposed Rulemaking (“NOPR”) issued pursuant to FPA Section 403.⁴⁸ Although you granted FERC’s request to extend the NOPR proceeding, you stated that you would continue to examine “all options within [your] authority under the *Department of Energy Organization Act*, the *Federal Power Act*, and any other authorities to take remedial action as necessary to ensure the security of the nation’s electric grid.”⁴⁹

Despite the fact that the time for such remedial action has come, FERC terminated your rulemaking proceeding and chose instead merely to study the issue further.⁵⁰ And although FERC acknowledged that “resilience remains an important issue that warrants the Commission’s continued attention,”⁵¹ it dismissed evidence establishing the threat to resilience posed by the

⁴⁶ *Id.* at 3 (citing Staff Report at 29-30).

⁴⁷ Staff Report at 91. *See also* NETL Report at 14 (“As for natural gas-fired electricity generation, two significant constraints inhibit its fuel resilience contribution during extreme weather events Most importantly, demand from competing sectors, especially from residential and commercial space heating, takes priority over electricity for natural gas use, limiting and even diminishing the capacity potential for natural gas-based electricity. Compounding this constraint is that of pipeline capacity. Even though abundant natural gas may be available, it must flow through the same limited pipeline capacity already delivering to increased heating demand.”).

⁴⁸ *See generally* Secretary NOPR Letter. *See also* NETL Report at 3 (“The need for reasonable compensation to maintain resilient capacity to endure such periodically-certain threats to the nation formed the basis of [DOE’s] resilience compensation proposal to [FERC].”).

⁴⁹ Secretary Extension Letter at 2 (*italics in original*).

⁵⁰ *Grid Reliability and Resilience Pricing et al.*, 162 FERC ¶ 61,012 (2018).

⁵¹ *Id.* at P 13.

imminent loss of additional nuclear and coal-fired generation and found instead that “the extensive comments submitted by the [regional transmission organizations and independent system operators (“RTOs/ISOs”)] do not point to any past or planned generator retirements that may be a threat to grid resilience.”⁵² Further, FERC concluded that it lacked the legal authority to act on your proposed rule for lack of a showing that current rules were unjust or unreasonable.⁵³

FERC’s response was disappointing. FERC’s reliance on comments by RTOs/ISOs—the very entities that preside over the flawed markets—is misplaced.⁵⁴ More fundamentally, FERC’s decision to study the issue further is too little, too late. As Commissioner Chatterjee noted, “[m]ajor regulatory reform efforts often can take several years to complete.”⁵⁵ The record before FERC, however, demonstrated that the time to act is now. Multiple commenters expect that the trend of premature, economic retirement of nuclear and coal-fired generators will continue if left unaddressed.⁵⁶ Indeed, seven nuclear units (representing 10,500 MW of nameplate capacity) are planning to retire by 2025.⁵⁷ And owners of other nuclear units have stated publicly that they do not intend to invest further in their nuclear units unless and until their host states pass legislation that subsidizes the units.⁵⁸

Even more troubling is that PJM has followed FERC’s lead and decided to kick the can down the road on this critical issue. In its Comments and Responses to FERC’s initiation of a new proceeding on grid resilience, PJM concludes that its bulk electric system “is safe and reliable today—it has been designed and is operated to meet all applicable reliability standards.”⁵⁹ While PJM acknowledged that “generation and other resources” supply essential attributes that support reliability and that “the maintenance or assurance of these attributes into the future are important to resilience mitigation,” PJM has committed to nothing more than further study of the issue.⁶⁰ And PJM’s position is all the more questionable in light of its admission that it does not conduct

⁵² *Id.* at P 15.

⁵³ *Id.* at P 14 (“For the reasons discussed below, the Proposed Rule did not satisfy those clear and fundamental legal requirements under section 206 of the FPA. Given those legal requirements, we have no choice but to terminate Docket No. RM18-1-000.”).

⁵⁴ Among other justifications for taking no action, FERC noted that the RTOs, and the industry more generally, do not have a clear definition or understanding of the resilience issue. *Id.* at P 22. As such, FERC’s decision to take no action was based on incomplete information.

⁵⁵ *Id.* at Chatterjee Concurrence.

⁵⁶ *Id.*

⁵⁸ Public Service Enterprise Group Inc., SEC Form 8-K, at 2 (Feb. 28, 2018).

⁵⁹ PJM Comments at 4.

⁶⁰ *Id.* at 46 (“PJM will need to continue to conduct analysis of the anticipated future availability of these attributes so that it can proactively address the maintenance of these attributes through the markets. PJM will also consider the operational lessons learned from other RTOs in regard to resource mix and essential resource attributes to continue to analyze future trends in resource mix and their impacts on both reliability and resilience.”).

system planning or operations subject to formal resilience criteria, and that it would need additional FERC authorization in order to do so.⁶¹

PJM's conclusion misses the point. As you noted, "urgent action must be taken to ensure the resilience and security of the electric grid."⁶² It is insufficient and wholly illogical to say that action is not needed going forward because PJM meets today's reliability criteria. PJM's comments demonstrate that it has yet to identify and measure resilience, much less taken steps to preserve the resilience of its electric grid.⁶³ Indeed, many of PJM's requests to the Commission do nothing more than pass the buck back to FERC on this critical issue.⁶⁴

Further, PJM's requests for action "to enhance resilience of the grid and interrelated systems"⁶⁵ will not address your concerns regarding the resilience and security of the Nation's electric grid. These requests, which call for additional FERC proceedings and RTO/ISO filings, in some cases require no action by any party for nine to twelve months *after the conclusion of the current FERC proceeding* and will do nothing to stem the tide of premature nuclear and coal-fired plant closures in the interim.⁶⁶ This is particularly alarming because PJM acknowledges that its Capacity Performance changes have failed to produce a long-term solution "to meet the ever-growing demand for gas transportation by the generation sector."⁶⁷ Indeed, natural gas availability

⁶¹ *Id.* at 33-34.

⁶² Secretary Extension Letter at 2.

⁶³ *See, e.g.*, PJM Comments at 37 ("Because PJM does not have formal resilience criteria, PJM adapts existing analyses . . . to derive conclusions about the ability of the PJM BES to withstand a high-impact, low-frequency event, and is working with stakeholders to determine how best to incorporate resilience into PJM's planning process and what criteria should be used."); *id.* at 66 ("RTO wholesale electricity, Ancillary Service markets, capacity markets, and shortage pricing mechanisms were not originally designed specifically with resilience in mind.").

⁶⁴ *See, e.g., id.* at 5 (requesting that FERC "[a]rticulate in this docket that the regional planning responsibilities of RTOs . . . includes an obligation to assess resilience"); *id.* (requesting that FERC "[e]stablish a Commission process . . . that would allow an RTO to receive verification as to the reasonableness of its assessments of vulnerabilities and threats").

⁶⁵ *See* PJM Comments at 5-8.

⁶⁶ *See, e.g., id.* at 6 ("Request that all RTOs . . . submit a subsequent filing . . . to implement resilience planning criteria, and develop processes for the identification of vulnerabilities, threat assessment and mitigation, restoration planning, and related process or procedures needed to advance resilience planning."); *id.* ("Request that all RTOs . . . submit a subsequent filing, including any necessary proposed tariff amendments, for any proposed market reforms and related compensation mechanisms to address resilience concerns within nine to twelve months from the issuance of a Final Order in this docket.").

⁶⁷ *Id.* at 57-58 ("Although PJM was hoping that the Capacity Performance changes would spur a corresponding array of new service offerings by pipelines (and generators seeking such options), at least on the public record such new pipeline services have not been offered as new open season requests [N]ew flexible services, to the extent they have been offered, appear to have been confined to the secondary market in which available gas from LDCs or industrial customers is made available, for a price, on the non-transparent bilateral secondary market. Although this is an effective short term strategy to 'move around' available capacity and take advantage of diversity in demand, it cannot, in the long run, serve as the sole means to meet the ever-growing demand for gas transportation by the generation sector."). PJM's admission that the Capacity Performance program fell short

during the recent cold weather in the eastern U.S. has prompted PJM to consider enacting emergency operational cost procedures for use when emergency conditions affect the grid or gas pipeline system.⁶⁸ PJM's efforts to "to engage interstate pipelines and LDCs to review gas pipeline contingencies"⁶⁹ similarly have failed to produce a long-term solution.

The lack of protection for at-risk nuclear and coal-fired plants during this time actually undermines the effectiveness of other PJM requests. For example, PJM requests that FERC require it to file proposed tariff amendments "to permit non-market operations during emergencies," which "could includ[e] provisions for cost-based compensation when the markets are not operational or when a wholesale supplier is directed to take certain emergency actions by PJM for which there is not an existing compensation mechanism."⁷⁰ FERC's and PJM's inaction, however, has significantly increased the risk that the very plants needed to take these emergency actions will have shuttered by the time PJM files and FERC approves these tariff provisions.

These events demonstrate that, absent immediate intervention by the Secretary, nuclear and coal-fired plants will continue to retire prematurely. In view of this regulatory failure, and as further detailed herein, Applicants seek action from the Secretary to ensure the continued operation of baseload nuclear and coal-fired power plants in PJM. Such immediate action is necessary to address an emergency in the bulk power system overseen by PJM and to serve the public interest by preventing power disruptions and system blackouts. Absent such an order, health care facilities, emergency services, and other critical infrastructure could be without power affecting portions of the 65 million people that reside within the PJM footprint.

contrasts sharply with its prior assurances to FERC that the Capacity Performance program would result in firm fuel supply. PJM Interconnection, L.L.C., Reforms to the Reliability Pricing Market ("RPM") and Related Rules in the PJM Open Access Transmission Tariff ("Tariff") and Reliability Assurance Agreement Among Load Serving Entities ("RAA") at 53, FERC Docket No. ER15-623-000 (Dec. 12, 2014) ("Capacity Market Sellers that now will face more harsh financial consequences for a failure to perform during emergencies (with no limit on when such emergencies arise) will likely need to invest in plant design changes or new equipment, or increase operating budgets to accommodate more staff, firm fuel delivery arrangements, greater inventories, or changed operating practices.").

⁷⁰ PJM Comments at 6.

II. APPLICATION FOR EMERGENCY ORDER

In the United States, RTOs work to ensure the operation and security of the bulk electric power system. PJM operates the electric grid and centralized electricity markets in all or part of 13 different states and the District of Columbia,⁷¹ overseeing over 178,000 MW of installed capacity and serving approximately 65 million people.⁷² Over half of PJM's generating capacity is nuclear and coal-fired generation,⁷³ and nearly one-quarter of the Nation's nuclear and coal-fired generating capacity is located within PJM.⁷⁴

PJM's power markets, however, consistently fail to compensate nuclear and coal-fired generators for the full value of the benefits that they provide, such as fuel security and diversity. As stated by a former Commissioner of FERC, "I believe that fuel diversity is really key in ensuring reliability going forward, even in these dynamic times . . . [I]t is imperative that we protect fuel diversity."⁷⁵ Such continued fuel diversity in PJM, however, is at risk.

PJM's independent market monitor recently found that between six and nine nuclear plants, with a total capacity of 7,058 MW to 14,027 MW, did not recover their avoidable costs—the costs to keep the generators operating—in two of the last three years.⁷⁶ Additionally, four nuclear plants, with capacity of 3,554 MW, are not expected to recover their annual avoidable costs on average from 2018 through 2020.⁷⁷ The market monitor similarly found that a "significant number of coal units are at risk of retirement" because 17,302 MW of coal-fired capacity is expected to receive less than 90 percent of its avoidable costs.⁷⁸ Overall, the market monitor found that, in addition to units currently planning to retire, between 22,929 MW and 30,785 MW of capacity in PJM,

⁷¹ PJM's territory includes all or parts of Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia, and the District of Columbia. *Who We Are*, PJM, <http://www.pjm.com/about-pjm/who-we-are.aspx> (last visited Mar. 22, 2018); *PJM's Mission & Vision*, PJM, <http://www.pjm.com/about-pjm/who-we-are/mission-vision.aspx> (last visited Mar. 22, 2018).

⁷⁷ *Id.*

⁷⁸ *Id.*

primarily from nuclear and coal-fired generation, is at risk of retirement.⁷⁹ In fact, the market monitor found that over 90 percent of the “at-risk” generation in PJM was either nuclear or coal-fired.⁸⁰ But new nuclear and coal-fired generation will not replace this lost capacity because, as the market monitor found, “[i]n 2017 . . . a new coal plant and a new nuclear plant would have been significantly unprofitable.”⁸¹

By contrast, nearly all oil, natural gas, hydroelectric, and pumped storage generators recovered fully their avoidable costs in 2017.⁸² This marked difference is a result of the fact that nuclear and coal-fired units are baseload plants. As such, they are designed to run “24/7” on a consistent basis with 25 days of on-site fuel availability (when running “full bore”), making them the backbone of the electric system.⁸³ PJM’s energy market, though, is designed not to consider or incentivize operational diversity, fuel security, or system resiliency. Rather, it dispatches generation units based only on short-term marginal price without regard for the fixed costs of the facility, or the firmness of its fuel supply or transportation. Specifically, PJM uses a reliability-constrained least-cost model to dispatch the lowest-cost units required to satisfy electricity demand.⁸⁴ But because nuclear and coal-fired units are designed to run continuously, they often continue to operate through lower-priced periods—such as the middle of the night—sometimes requiring them to sell their electricity output at a loss. This is particularly true in states with large amounts of wind-powered generation, as wind tends to generate at its peak overnight when electricity demand is low.⁸⁵ The unavoidable requirement to operate during lower-priced periods places significant financial strain on baseload units such as nuclear and coal-fired generators that are not properly compensated in the existing markets.⁸⁶ All indications are that these trends will continue.

⁸⁶ Markets only provide signals that lead to efficient decisions on the part of market participants if the markets “efficiently price all valuable services provided to the system.” FirstEnergy Reply Comments, Ex. 1 (“Hunger Reply Aff.”) at 9, *Grid Resiliency Pricing Rule*, FERC Docket No. RM18-1-000 (Nov. 7, 2017).

PJM's market monitor cursorily dismissed this undeniable trend of nuclear and coal-fired generation retirements because of under-recovery, stating that "[m]any generating plants have retired in PJM since the introduction of markets and many generating plants have been built since the introduction of markets" and that "[t]he fact that some plants are uneconomic does not call into question the fundamentals of PJM markets."⁸⁷ This response is alarming to say the least. Nuclear and coal-fired generation provides substantial resilience and security benefits to the electric grid and to the Nation. Indeed, as the market monitor itself recognized, "[s]ignificant reliance on specific fuels, including nuclear, coal and gas means that markets are at risk from a significant disruption in any one fuel."⁸⁸ By treating the lost nuclear and coal-fired capacity the same as the non-nuclear and non-coal-fired capacity that has replaced it, the market monitor ignores the significant threat to the electric grid and the Nation's security posed by the loss of resilient, fuel-secure baseload generation.

As explained below, Applicants request that DOE determine that an emergency exists in PJM within the meaning of FPA Section 202(c) with respect to a threat to energy security and reliability, and thus direct the subject baseload nuclear and coal-fired generators to enter into contracts and all necessary arrangements with PJM, on a plant-by-plant basis, to generate, deliver, interchange, and transmit electric energy, capacity, and ancillary services to maintain fuel diversity and grid dependability and resiliency within the PJM region.

A. The Secretary's Authority Under Section 202(c) of the Federal Power Act

Section 202(c) of the Federal Power Act grants the Secretary the authority to determine "that an emergency exists by reason of a sudden increase in the demand for electric energy, or a shortage of electric energy or of facilities for the generation or transmission of electric energy,"⁸⁹ and, once such a determination is made, "to require by order such temporary connections of facilities and such generation, delivery, interchange, or transmission of electric energy as in [his] judgment will best meet the emergency and serve the public interest."⁹⁰

The Secretary's authority and discretion under Section 202(c) is quite broad and is not limited to emergencies caused by war or limited in duration. Section 202(c) states that it may be invoked during times of war or during emergencies, and empowers the Secretary "whenever [he] determines that an emergency exists by reason of" certain specified market conditions "or other causes" to order actions "as in [his] judgment will best meet the emergency and serve the public interest."⁹¹

⁸⁷ 2017 PJM Report at 2.

⁸⁸ *Id.* at 5.

⁸⁹ 16 U.S.C. § 824a(c)(1).

⁹⁰ *Id.*

⁹¹ *Id.* The legislative history of Section 202(c) confirms this interpretation, explaining that in crisis conditions DOE should be "ready to do all that can be done in order to prevent a break-down in electric supply." S. Rep. No. 74-621, at 49.

DOE's regulations define emergency broadly, stating that an emergency "can result from a sudden increase in customer demand, an inability to obtain adequate amounts of the necessary fuels to generate electricity, or a regulatory action which prohibits the use of certain electric power supply facilities."⁹² In addition, the regulation also states that "[e]xtended periods of insufficient power supply as a result of inadequate planning or the failure to construct necessary facilities can result in an emergency"⁹³

The current situation in PJM constitutes such an emergency.

B. An Emergency Exists Due to the Recent and Imminent Critical Reduction in Nuclear and Coal-Fired Generation Capacity

The Nation's bulk electric system is undergoing rapid change. As the DOE recently recognized, the provision of electricity provides various benefits that are not recognized or compensated by the markets created by these politically driven actions:

Society places value on attributes of electricity provision beyond those compensated by the current design of the wholesale market.

- Americans and their elected representatives value the various benefits specific power plants offer, such as jobs, community economic development, low emissions, local tax payments, resilience, energy security, or the national security benefits associated with a nuclear industrial base. Most of these benefits are not recognized or compensated by wholesale electricity markets.⁹⁴

Indeed, the DOE's January 2017 Quadrennial Energy Review states that "[s]hort-run markets may not provide adequate price signals to ensure long-term investments in appropriately configured capacity" and "resource valuations tend not to incorporate superordinate network and/or social values such as enhancing resilience into resource or wires investment decision making."⁹⁵ IHS Energy has found that, as a result of this "missing money" problem, "the loss of

⁹² 10 C.F.R. § 205.371.

⁹³ *Id.*

⁹⁴ Staff Report at 11.

⁹⁵ U.S. DEP'T OF ENERGY, TRANSFORMING THE NATION'S ELECTRICITY SYSTEM: THE SECOND INSTALLMENT OF THE QUADRENNIAL ENERGY REVIEW 4-41 (January 6, 2017), available at <https://www.energy.gov/sites/prod/files/2017/02/f34/Quadrennial%20Energy%20Review--Second%20Installment%20%28Full%20Report%29.pdf>.

power supply diversity is accelerating because too many power plants are retiring before it is economic to do so.”⁹⁶

This market failure is reaching a crisis point. Dr. David Hunger, a former FERC Staff member and Vice President within the Energy Practice of Charles River Associates, found that “there were more [generator] retirements in the seven-year period from 2010 to 2016 (457 units) than in the 20-year period from 1990 to 2009 (358 units). Likewise, the quantity of nuclear and coal-fired generation capacity retired in 2010-2016 (68,540 MW nameplate) was more than double that in the prior 20 years, 1990-2009 (26,721 MW nameplate).”⁹⁷ As the DOE concluded, “[g]enerator profitability could become a public policy concern if so much generation is financially challenged that the reliability or resilience of the [bulk power system] become threatened.”⁹⁸ The rash of nuclear and coal-fired generator closings and other recent events in PJM are evidence that it already is a public policy concern. But these are not the only warning signs.

January 2014 Polar Vortex in PJM: A severe cold snap spiked customer demand, dropping system reserves in PJM to just 500 MW (on a demand of over 140,000 MW).⁹⁹ PJM calculated that 9,300 MW of generation was unavailable during this event due to interruptions in the natural gas supply to generators.¹⁰⁰ While this loss of generating capacity could have been catastrophic, multiple coal-fired generating units slated for retirement were dispatched to meet electric demand¹⁰¹ and nuclear generators also “performed extremely well.”¹⁰² “Sixty-five million people within the PJM footprint could have been affected if these traditional baseload units were not available.”¹⁰³

Extreme Cold in December 2017 and January 2018: From December 27, 2017, to January 8, 2018, the eastern U.S. saw extremely cold temperatures and spiking electric demand, which again illustrate how such weather impacts natural gas supply to electric generating units. Nuclear

and coal-fired plants out-performed natural gas plants during this period by a significant margin.¹⁰⁴ For example, on the morning of Friday, January 5, 2018, nuclear and coal-fired generators were running at 135% and 111% of their committed capacity in PJM's 2017-2018 capacity auction, whereas natural gas plants were running at merely 45% of their committed capacity.¹⁰⁵ In fact, while over 64,000 MW of gas-fired generation cleared in the 2017-2018 capacity auction, only approximately 29,000 MW were running that morning.¹⁰⁶ As the recent NETL Report on the cold weather event concluded, demand in PJM "could not have been met without coal."¹⁰⁷ These facts are quite telling, as much of this difference can be attributed to natural gas price spikes and supply interruptions.¹⁰⁸ While the PJM grid has not experienced load-shedding, thanks to lower electric demand over the holiday season and the performance of nuclear and coal-fired generators, this may not be the case during future extreme weather events if the trend of nuclear and coal-fired plant closures continues.¹⁰⁹

¹⁰⁴ See PJM COLD SNAP PERFORMANCE 2018 at 13 & fig.10 (showing that nuclear and coal-fired generation combined constituted 63% of the online fuel mix during the 2018 cold snap, while natural gas-fired generation constituted 22%).

¹⁰⁶ See *Data Miner 2*, PJM, <http://www.pjm.com/markets-and-operations/etools/data-miner-2.aspx>, (when filtered to Generation by Fuel Type for 8 a.m. on January 5, 2018, showing gas output of 28,624.3 MW); *Commitments by Fuel Type & Delivery Year 2007/08 - 2019/20*, PJM, <http://www.pjm.com/-/media/markets-ops/rpm/rpm-auction-info/rpm-commitment-by-fuel-type-by-dy.aspx?la=en> (last visited Mar. 22, 2018) (showing cleared UCAP for 2017-2018 planning year of 64,089 MW for gas-fired generation); see also PJM COLD SNAP PERFORMANCE 2018 at fig.11.

¹⁰⁷ NETL Report at 17.

¹⁰⁸ Operational flow orders (restrictions/limitations placed on gas consumption by pipeline operators) have been in place on numerous natural gas pipelines throughout PJM since late December 2017, including Transco, Texas Eastern, Dominion, and Columbia. See Transco Pipeline, *Critical Notices*, <http://www.1line.williams.com/Transco/index.html> (last visited Mar. 22, 2018); Texas Eastern, *Critical Notices*, <https://infopost.spectraenergy.com/infopost/> (last visited Mar. 22, 2018); Dominion, *Critical Notices*, http://dekaflow.dominionenergy.com/jsp/info_post.jsp?&company=dti (last visited Mar. 22, 2018); Columbia Gas Transmission, *Critical Notices*, <http://www.columbiapipeinfo.com/cpginfopost/> (last visited Mar. 22, 2018). See also NETL Report at 14 ("[N]atural gas in PJM spiked from a normal level near \$3/MMBtu to \$96/MMBtu at the Texas Eastern M3 interface, in Southeastern PA, at the [bomb cyclone] peak on January 5.").

¹⁰⁹ NETL Report at 18 ("To maintain the resilience seen in this event, any retiring units that were dispatched during the event would have to be replaced with other resilient generation sources and their associated infrastructure (e.g. pipelines, transmission). Due to the timeframe required for permitting, development, and construction, these projects must be well underway prior to potential unit retirements to ensure their availability.").

June 2017 Yorktown Un-Retirement: The Department of Energy issued a Section 202(c) order to force Dominion Energy to keep its Yorktown coal-fired units in PJM online to address future reliability needs.¹¹⁰

System Design Changes: The bulk power system is undergoing a rapid transformation and the impacts of this change are not being fully studied or understood. The system is moving from one that was driven by sound engineering practices and multiple redundancies to a system using an economic model with no consideration for system needs. The North American Electric Reliability Corporation (“NERC”) has noted that the “changing resource mix is altering the operating characteristics of the bulk power system.”¹¹¹ NERC warned that these changes must be “properly managed in order to assure continued reliability and ensure resiliency.”¹¹²

Pipeline Vulnerabilities: A report published by Quanta Technology noted high levels of vulnerability in PJM from a shortfall of pipeline capacity supplying the Atlantic coast, a shortfall of pipeline capacity to access storage and production, disruptions in supply or storage during winter peak season, and a lack of firm gas supply contracts.¹¹³

Future Price Volatility: A recent report by IHS Energy states that the current diversified portfolio of the U.S. power supply lowers the cost of generating electricity by more than \$93 billion per year compared to a less diverse case with no meaningful contributions from nuclear and coal-fired generation.¹¹⁴ As such key baseload plants continue to retire, price volatility is expected to rise as the system becomes more reliant on a single fuel source.¹¹⁵ Dr. Hunger similarly concluded that, “[w]hen resources retire, [market] prices can fluctuate in an unpredictable manner.”¹¹⁶

Baseload Plant Closures: In the past four years, over 11,000 MW of coal-fired generation has closed in PJM, the equivalent of a dozen large power plants.¹¹⁷ Many of these plants were

¹¹⁰ Order No. 202-17-2 (Dep’t of Energy June 16, 2017), *reh’g dismissed sub nom.* Order No. 202-17-5 (Sep. 15, 2017). *See also* Order No. 202-17-4 (Dep’t of Energy Sep. 14, 2017) (renewing initial order), *reh’g dismissed sub nom.* Order No. 202-18-1 (Nov. 6, 2017); Order No. 202-18-2 (Dep’t of Energy Dec. 13, 2017) (further renewing order).

¹¹⁶ Hunger Aff. at 33.

¹¹⁷ 2017 PJM Report at 544 tbl.12-5 (listing coal unit retirements of 2,239 MW, 7,064.8 MW, 243 MW, and 2,038 MW in 2014, 2015, 2016, and 2017, respectively).

operating during the 2014 Polar Vortex and are no longer available to run in the event of system stress.

Problems Associated with Location of Replacement Resources: Generation resources used to replace retiring plants are frequently located far away from the location of the retiring generation, which poses multiple problems. First, as Dr. Hunger states, this “may cause temporary or persistent congestion, increasing uncertainty related to locational pricing, a primary signal against which generation investment or retirement decisions need to be made.”¹¹⁸ Second, significant new transmission infrastructure may need to be constructed. For example, approximately \$1 billion of new transmission infrastructure was needed to maintain reliability after closure of certain generating units in northern Ohio in 2014 and 2015.¹¹⁹

Additional Plant Closures: Numerous baseload plants in PJM have announced that they are financially challenged and are closing or contemplating closure. If action is not taken, thousands of additional megawatts of reliable baseload power will retire in the next several years, leaving PJM without fuel-secure baseload resources.¹²⁰

- It is a matter of public record that FirstEnergy Solutions, which through Applicants indirectly owns 12,300 MW of generation, likely will file for bankruptcy by the end of March 2018.¹²¹ Multiple plants are at risk for permanent closure as a result of this expected action.
- FirstEnergy Solutions submitted notices to PJM on March 28, 2018, that it would deactivate its three nuclear plants, Davis-Besse (908 MW), Perry (1,268 MW), and Beaver Valley (1,872 MW), by 2021.

¹¹⁸ Hunger Aff. at 33.

¹¹⁹ Direct Testimony of Gavin Cunningham at 3, Application of Ohio Edison et al., Pub. Util. Com’n of Ohio No. 14-1297-EL-SSO (Aug. 4, 2014).

¹²⁰ In addition to the closures listed, Dominion submitted deactivation requests in January 2018 for four coal-fired units with capacity totaling approximately 400 MW. PJM FUTURE DEACTIVATIONS (Dec. 29, 2017), <http://www.pjm.com/-/media/planning/gen-retire/pending-deactivation-requests.ashx?la=en> (“PJM FUTURE DEACTIVATIONS”). These units were placed in “cold reserve”—meaning they could be restarted if necessary—based on a number of factors including the cost of solar and wind generation and the abundance of natural gas. Sarah Rankin, *Dominion to Eliminate Nearly 400 Positions After Review of Power Generation Group*, RICHMOND TIMES-DISPATCH (Jan. 17, 2018), http://www.richmond.com/news/virginia/dominion-to-eliminate-nearly-positions-after-review-of-power-generation/article_60633a02-01d5-50a8-befc-f2ccf04b8fb5.html.

¹²⁹ PJM DEACTIVATIONS.

- Exelon has announced that it will close the Oyster Creek nuclear plant (608 MW) in October 2018—a decade before the end of its operating license—citing negative economic factors.¹³⁰
- Exelon has announced the premature closure of the 837 MW Three Mile Island nuclear power plant in September 2019, citing deteriorating economic value.¹³¹

C. The Emergency in Nuclear and Coal-Fired Generation Threatens Generation Diversity, Resiliency, Dependability, and Electric Security in PJM

A recent PJM report noted that the system was able to maintain operational reliability with a system comprised of 86 percent natural gas-fired generation, however the report did not fully capture risks associated with gas deliverability.¹³² PJM itself admits to this issue, stating, “We found that the risk to the system wasn’t that resources couldn’t necessarily provide reliability attributes but that the potential concentration of a single fuel source or low-probability, high-impact events could cause significant impacts to the system.”¹³³

Without baseload nuclear and coal-fired generation, the United States is taking the most sophisticated and redundant bulk electric system in the world and putting it on top of an unsophisticated bulk gas system that lacks the same level of redundancy, creating additional security risks. An electric system that is not resilient to high-impact events is not a reliable system, and is one that threatens the national security of the United States. In short, the continued retirement of nuclear and coal-fired generating facilities in PJM has resulted in an emergency situation that has placed the continuing security of PJM at risk. As you noted in your September 28, 2017 letter to FERC, “the resiliency of the electric grid is threatened by the premature retirement of these fuel-secure traditional baseload resources.”¹³⁴

¹³² PJM INTERCONNECTION, PJM’S EVOLVING RESOURCE MIX AND SYSTEM RELIABILITY 5 (Mar. 30, 2017) (“[A]dditional risks, such as gas deliverability during polar vortex-type conditions and uncertainties associated with economics and public policy, were not fully captured in this analysis.”), <http://www.pjm.com/~media/library/reports-notice/special-reports/20170330-pjms-evolving-resource-mix-and-system-reliability.ashx>.

¹³³ Press Release, PJM, PJM Study: System Reliable Even with Much More Gas, Renewables; Resilience Key to Operational Reliability (Mar. 30, 2017) (emphasis added) (quoting Michael Bryson, PJM Vice President of Operations), <http://www.pjm.com/~media/about-pjm/newsroom/2017-releases/20170330-pjms-evolving-resource-mix-and-system-reliability.ashx>.

¹³⁴ Secretary NOPR Letter at 1.

PJM itself has recognized the need for resiliency, finding that, “[i]n addition to delivering energy services reliably during strained system conditions, to which probabilities can be attached (e.g., plant outages, weather variability), a resilient energy system also must be resistant to larger scale shocks to which it is difficult to attach probabilities”¹³⁵ PJM recently concluded that “reliability attributes supplied through generation and other resources . . . support reliability” and “the maintenance or assurance of these attributes into the future are important to resilience mitigation.”¹³⁶ Fuel diversity and security are key components of a resilient grid. PJM acknowledged the connection between diversity and resiliency when it committed to “analyz[ing] future trends in resource mix and their impacts on both reliability and resilience.”¹³⁷ As PJM’s market monitor stated, “[s]ignificant reliance on specific fuels, including nuclear, coal and gas means that markets are at risk from a significant disruption in any one fuel.”¹³⁸

NERC goes further, recognizing not only the importance of fuel diversity in maintaining a resilient energy system,¹³⁹ but also the critical contributions of nuclear and coal-fired resources to mitigating risks to the electric grid.¹⁴⁰ Overreliance on natural gas, by contrast, *increases* risk to the electric grid because, as NERC states, “within a relatively short time, a major failure” in the natural gas transmission system “could result in a loss of electric generating capacity that could exceed the electric reserves available to compensate for these losses.”¹⁴¹ As explained by Dr. Henry Chao, Executive Advisor and Vice President at Quanta Technology and former Vice President at New York Independent System Operator (“NYISO”): “Abundant supplies of natural gas provide many advantages to electric consumers, but . . . natural gas delivery systems lack the reliability and redundancy of the bulk electric system. Specifically, there are no systematic reliability criteria for natural gas delivery system planning and operations; whereas the electric power industry has mandatory reliability standards that are developed and enforced by NERC.”¹⁴²

¹³⁹ N. AM. ELEC. RELIABILITY CORP., SYNOPSIS OF NERC RELIABILITY ASSESSMENTS: THE CHANGING RES. MIX AND THE IMPACTS OF CONVENTIONAL GENERATION RETIREMENTS 4 (May 9, 2017) (“Fuel diversity provides a fundamental benefit of increased resilience. . . . Areas with limited fuel and/or limited resource diversity may be challenged and should increase their attention to resiliency planning”).

¹⁴⁰ *Id.* (“Coal and nuclear resources, by design, are designed for low cost O&M and continuous operation. However, it is not the economics nor the fuel type that make these resources attractive from a reliability perspective. Rather, these conventional steam-driven generation resources have low forced and maintenance outage hours traditionally and have low exposure to fuel supply chain issues.”); *id.* at 2 (“Coal-fired and nuclear generation have the added benefits of high availability rates, low forced outages, and secured on-site fuel. Many months of on-site fuel allow these units to operate in a manner independent of supply chain disruptions.”).

¹⁴¹ N. AM. ELEC. RELIABILITY CORP., 2013 SPECIAL RELIABILITY ASSESSMENT: ACCOMMODATING AN INCREASED DEPENDENCE ON NATURAL GAS FOR ELECTRIC POWER; PHASE II: A VULNERABILITY AND SCENARIO ASSESSMENT FOR THE NORTH AMERICAN BULK POWER SYSTEM 3-4 (MAY 2013).

¹⁴² FirstEnergy Comments, Ex. 6 (“Chao Aff.”) at 11, *Grid Resiliency Pricing Rule*, FERC Docket No. RM18-1-000 (Oct. 23, 2017).

Unless immediate action is taken, the continued retirement of nuclear and coal-fired generating units—by breeding greater dependence on generation fueled by natural gas, which is subject to supply disruptions, constrained pipeline capacity, a general inability to store fuel on-site, and competing demand from consumer heating in winter months—will increasingly result in significant, negative outcomes for the approximately 65 million people living and working within the PJM footprint. These harmful consequences include increased electric price volatility, lessened grid resilience and dependability, uncertain electric security in the future, decreased economic stability, and severe job losses—especially in the coal sector—as both power plants and fuel suppliers declare bankruptcy and cease operations. Combined, these conditions are potentially disastrous for the electric grid and the economy. PJM itself recently found that as the “resource mix moves in the direction of less coal and nuclear generation, generator reliability attributes of frequency response, reactive capability and fuel assurance decrease. . . .”¹⁴³

This is not idle speculation. As illustrated over the period of extreme cold in the eastern U.S. from December 27, 2017, through January 8, 2018, PJM was able to maintain reliability on its system in large part due to the strong performance from nuclear and coal-fired generators—performance that well exceeded those plants’ commitments in PJM’s capacity auction. In contrast, natural gas-fired plants were operating well below expected levels. Without these fuel-secure baseload generating resources, many of which are facing imminent retirement, the outcome may have been much different. And with temperatures well below freezing throughout virtually all of PJM during this time, a different outcome could have been catastrophic to public health and safety.

The challenges are not limited to just PJM, but are rampant in competitive electric markets throughout the Nation. While traditional vertically integrated utilities continue to provide safe, reliable, and affordable electric generation service every day, areas with RTO markets face problems resulting from the failure to recognize the importance of fuel security and fuel diversity. These incidents provide insight into vulnerabilities potentially facing PJM:

February 26, 2008 Wind Decrease in ERCOT: An unexpected drop in wind generation coupled with a demand increase from cold weather caused ERCOT to have to cut service to large industrial customers.¹⁴⁴ ERCOT had 10 minutes to curtail nearly three percent of the system load to avoid blackouts.¹⁴⁵

¹⁴³ PJM INTERCONNECTION, PJM’S EVOLVING RES. MIX AND SYSTEM RELIABILITY 5 (Mar. 30, 2017).

¹⁴⁵ See Eileen O’Grady, *Loss of Wind Causes Texas Power Grid Emergency*, REUTERS (Feb. 27, 2008), <http://www.reuters.com/article/us-utilities-ercot-wind-idUSN27495229200802287feedType=RSS&feedName=domesticNews&rpc=22&sp=true>.

February 2011 Cold Weather in ERCOT: Rolling blackouts affected 3.2 million customers and, had ERCOT not shed load, a widespread, uncontrolled blackout would have occurred.¹⁴⁶

New England ISO Winter Reliability Program: Since 2014, the New England Independent System Operator Inc. ("ISO New England") has had to establish winter reliability programs in an attempt to ensure continued operation of natural gas-fired generators during periods of cold weather.¹⁴⁷ Pipeline capacity issues, first identified in 2004, remain issues today and have yet to be solved by the competitive marketplace.¹⁴⁸ As ISO New England recently noted, "[i]n New England, the most significant resilience challenge is fuel security—or the assurance that power plants will have or be able to obtain the fuel they need to run, particularly in winter—especially against the backdrop of coal, oil, and nuclear unit retirements, constrained fuel infrastructure, and the difficulty in permitting and operating dual-fuel generating capability."¹⁴⁹ ISO New England thus concluded that "while New England is meeting its resource adequacy requirements for capacity—which are based on expected summer peak demands—with the market mechanisms that are in place today, from an energy availability standpoint, the shift from generators with on-site fuel to generators relying on 'just-in-time' fuel delivery is challenging the system's adequacy and, therefore, its resilience, particularly during winter peak demands."¹⁵⁰ Indeed, in nearly all of the fuel mix scenarios studied by ISO New England, there would be "[e]nergy shortfalls due to inadequate fuel . . . requiring frequent use of emergency actions to keep power flowing and protect the grid."¹⁵¹ These emergency actions could include rolling blackouts.¹⁵²

2016-2017 Aliso Canyon in CAISO: A leak at the Aliso Canyon natural gas storage facility was discovered in October 2015, causing the facility to close to subsequent injections until July 2017.¹⁵³ Although Aliso Canyon continues to operate, the California Public Utilities Commission

has opened a proceeding “to determine the feasibility of minimizing or eliminating the use of [the facility]”¹⁵⁴ and legislation was introduced to shut down the facility.¹⁵⁵

May 3, 2017 CAISO Emergency: Normal system operations quickly turned into an emergency when energy imports failed to materialize.¹⁵⁶ The impacts were heightened as the daily rapid decline of solar power occurred as evening approached.¹⁵⁷ The California Independent System Operator Inc. (“CAISO”) had minutes to deploy emergency reserves and quickly went from normal system operations to a Stage 1 Emergency.¹⁵⁸

Natural Gas Plant Bankruptcies: In 2016, two large natural gas-fired plants in California, totaling 1,778 MW, declared bankruptcy because they could not make sufficient revenues in the CAISO wholesale markets.¹⁵⁹ In 2017, Panda Temple Power’s 758 MW natural gas plant in Texas filed for bankruptcy.¹⁶⁰ GenOn Energy, with over 9,000 MW of gas-fired generation, filed for bankruptcy in 2017 as well,¹⁶¹ and recently announced the retirement of three gas-fired power plants located in Southern California due to “economic reasons.”¹⁶²

D. Emergency Action by the Secretary Is Required

Although FERC complied with the directive of the Secretary pursuant to Section 403 of the DOE Organization Act in issuing a Notice of Proposed Rulemaking addressing these issues,¹⁶³ it has failed to undertake any action that will stem the tide of plant closures and thus prevent the impending crisis. You yourself said that “it is [FERC’s] immediate responsibility to take action

¹⁶³ Grid Resiliency Pricing Rule, 82 Fed. Reg. 46,940 (Oct. 10, 2017).

to ensure that generation resources with on-site fuel supplies and the ability to provide essential energy and ancillary reliability services including voltage support, frequency services, operating reserves, and reactive power are fully valued. . . .¹⁶⁴ But FERC failed to do so and there is no indication that meaningful and substantive action by FERC will come in time to stem the tide of plant closures.

The DOE correctly recognized that the “recent Polar Vortex, as well as the devastation from Superstorm Sandy and Hurricanes Harvey, Irma, and Maria, reinforces the urgency that [FERC] must act now.”¹⁶⁵ Further, as you observed, “over the past several years, [FERC] has developed an extensive record on price formation [issues] in [FERC] approved ISOs and RTOs.”¹⁶⁶ And, as you recently noted, “[t]he voluminous comments filed in the [FERC NOPR] proceeding provide substantial evidence of, and otherwise confirm, the threat to the nation’s electricity grid and the urgent need for [FERC] action to reform market rules to preserve fuel-secure generation resources.”¹⁶⁷ Despite the urgency and its extensive record, FERC has failed to take the action necessary to address the emergency in PJM.

As you correctly noted, “it is especially urgent to prevent premature retirements of the resources that have these critical [fuel-secure] attributes.”¹⁶⁸ As a result of FERC’s and the RTOs’ failure to address this crisis, swift and decisive action is needed *now* to address this imminent loss of nuclear and coal-fired baseload generation and the threat to the electric grid that this loss poses. The Secretary needs to immediately issue an emergency order, pursuant to his authority under section 202(c) of the Federal Power Act, 16 U.S.C. § 824a(c), to ensure that baseload nuclear and coal-fired generators in PJM do not retire prematurely and are fully compensated for the benefits and services that they provide, as more fully described in Section II.B above. The order should find that an emergency exists because of the recent and imminent critical reduction in nuclear and coal-fired generation capacity, which threatens generation diversity, resiliency, dependability, and electric security in PJM. As this winter’s events revealed, without the availability of these critical, fuel-secure plants during extreme weather events (which can happen at any time during the year—not just in the winter), the PJM grid will likely experience reliability issues.

E. Information Required by Section 205.373

Applicants provide below the information called for by Section 205.373 of DOE’s regulations.¹⁶⁹ To be clear, Applicants’ request in this application applies to *all* eligible plants in

¹⁶⁴ Secretary Extension Letter at 1.

¹⁶⁵ Dep’t of Energy, Notice of Proposed Rulemaking to FERC at 11 (Sept. 28, 2017).

¹⁶⁶ Secretary NOPR Letter at 6.

¹⁶⁷ Secretary Extension Letter at 1.

¹⁶⁸ Secretary NOPR Letter at 1.

¹⁶⁹ 10 C.F.R. § 205.373. Certain elements of Section 205.373 address the circumstances of an applicant facing a shortage of real power and the prospect of firm customer curtailment, but do not address the emergency circumstances described herein, which involve a threat to the system more broadly. Applicants have indicated where these requirements are not applicable to the circumstances at hand.

PJM, not just those that they themselves own and operate. However, at this time Applicants only possess the required information for their own plants. To address this fact, Applicants request that the Secretary require PJM to obtain such information immediately from all eligible generators and begin negotiating agreements for the continued operation and appropriate compensation of such units.

a) Legal name of applicants. The applicants are FirstEnergy Generation, LLC, FirstEnergy Nuclear Generation, LLC, FirstEnergy Nuclear Operating Company, and FirstEnergy Generation Mansfield Unit 1 Corp. This application refers to these entities, collectively, as "Applicants."

b) Person to whom correspondence should be addressed. Correspondence with respect to this application should be directed to the following persons:

William S. Scherman
Partner
Gibson, Dunn & Crutcher LLP
1050 Connecticut Avenue, N.W.
Washington, DC 20036
Tel: (202) 887-3510
Fax: (202) 530-9557
wscherman@gibsondunn.com

Rick C. Giannantonio
General Counsel
FirstEnergy Solutions Corp.
76 South Main Street
Akron, OH 44308
Tel: (330) 384-5893
Fax: (330) 384-3875
giannanr@firstenergycorp.com

c) Political subdivisions in which applicants operate and conduct business. Applicants own and operate certain nuclear and coal-fired generation assets, and provide energy-related products and services to retail and wholesale customers, in the states of Ohio and Pennsylvania.

d) Baseline data.

1) Daily peak load and energy requirements for each of the past 30 days, and projections for each day of the Emergency Period. These requirements are not applicable to Applicants' request, which contemplates relief on a broad scale. Nonetheless, Applicants provide as Attachment B a chart showing the monthly output of nuclear and coal-fired generation in PJM for the period 2012 through 2017.

2) All capacity and energy receipts or deliveries to other electric utilities for each of the past 30 days. Applicants respectfully submit that such information is not applicable to the present application.

3) The status of all interruptible customers for each of the past 30 days, and anticipated status during the Emergency Period. Applicants respectfully submit that such information is not applicable to the present application. Applicants are requesting emergency relief to *avoid* the interruption of power supply to the 65 million customers in the PJM footprint.

- 4) All scheduled capacity and energy receipts or deliveries to other electric utilities during the Emergency Period. Applicants respectfully submit that such information is not applicable to the present application.
- e) A description of the emergency situation, any contingency plan, and the current level of implementation. The emergency situation faced by PJM and consumers of electric energy within its footprint is described above in Section I and Section II.B. Applicants do not have any contingency plan to provide power to the PJM market and its 65 million customers absent an order of the Secretary in accordance with the emergency relief requested herein. As explained above, nuclear and coal-fired generating units in PJM are closing at an alarming rate, with efforts to “save” generation for energy security having failed. Implementation prior to the Secretary granting emergency relief is unworkable.
- f) A showing that adequate electric service to firm customers cannot be maintained without additional power transfers. As explained above, the recent and imminent shut-down of nuclear and coal-fired generating units in PJM puts at risk the ability to provide firm, reliable electric service within the PJM footprint without emergency action to maintain the operation of these generating facilities.
- g) A description of any conservation or load reduction actions that have been implemented. PJM has implemented limited demand response efforts in recent years,¹⁷⁰ but these efforts, and future similar ones, cannot come close to replacing the nuclear and coal-fired generation at risk of loss.
- h) A description of efforts made to obtain additional power through voluntary means and the results of such efforts. Applicants respectfully submit that such information is not applicable to the present application because it is the responsibility of PJM, not Applicants, to balance load and resources within the PJM footprint. PJM’s efforts to obtain additional power through voluntary means has been limited to market redesign efforts, such as Capacity Performance, which have failed to add sufficient fuel-secure generating capacity to the PJM market. Additionally, PJM is “fuel neutral” and has undertaken no effort to maintain nuclear and coal-fired generation, which provides fuel diversity and helps ensure sufficiency of supply during times of spiking demand such as that experienced this past winter.
- i) A listing of proposed sources and any amounts of power necessary from each source to alleviate the emergency and a listing of any other “entities” that may be directly affected by the requested order. See Attachment A for listing of nuclear and coal-fired generation facilities in PJM. Applicants submit that firm power supply agreements between PJM and the owners of each nuclear and coal-fired generating facility in PJM satisfying the criteria set forth in Section II.F are necessary to alleviate the emergency. Such generating facilities provide significant

¹⁷⁰ See *PJM Markets FAQ*, PJM, <https://learn.pjm.com/three-priorities/buying-and-selling-energy/markets-faqs.aspx> (last visited Mar. 22, 2018).

benefits to energy markets and the public at large, including fuel security and diversity, but receive no reliable cost support and, instead, must rely on PJM's power markets which fail to compensate these generators for the full value of the benefits that they provide.¹⁷¹

- j) Specific proposals to compensate the supplying "entities" for the emergency services requested and to compensate any transmitting "entities" for services necessary to deliver such power. Applicants propose that, as long as an emergency continues to exist, subject generators and PJM shall operate pursuant to contracts developed and agreed upon by the parties themselves. As explained below, in the event that PJM and the generators are unable to agree to the contractual terms within fifteen (15) days of the issuance of the order, then Applicants request that the Secretary step in and determine the just and reasonable compensation and conditions.
- k) A showing that, to the best of the applicant's knowledge, the requested relief will not unreasonably impair the reliability of any "entity" directly affected by the requested order to render adequate service to its customers. The relief requested by Applicants is to *secure* the reliability of every entity and customer located within PJM's boundaries; no entities are expected to be reasonably or unreasonably impaired by the requested relief. Indeed, the requested relief is designed to enhance the ability of the subject generators and PJM to serve customers.
- l) Description of the facilities to be used to transfer the requested emergency service to the applicant's system. In order to retain the electric generation necessary to prevent and alleviate the emergency, the Secretary's order pursuant to Section 202(c) should apply to nuclear and coal-fired generators located within the PJM footprint that have a supply of fuel on-site sufficient to allow twenty-five (25) days of operation at full output, that are substantially compliant with all applicable federal, state, and local environmental laws and regulations, and that do not recover any of their capital or operating costs through rates regulated by a duly authorized state regulatory authority, municipal government, or energy cooperative. Such generating facilities provide significant benefits to energy markets and the public at large, including fuel security and diversity, but receive no reliable cost support and, instead, must rely on PJM's power markets which fail to compensate these generators for the full value of the benefits that they provide. Attachment A provides a listing of all nuclear and coal-fired generation facilities in PJM but only some of these facilities will likely satisfy the above criteria.
- m) A general or key map on a scale not greater than 100 kilometers to the centimeter showing, in separate colors, the territory serviced by each "entity" named in the application; the location of the facilities to be used for the generation and

¹⁷¹ Although PJM's markets fail to adequately compensate nuclear and coal-fired generators for the benefits that they provide, a subset of these generators may nevertheless recover their costs plus an acceptable rate of return through other regulatory mechanisms.

transmission of the requested emergency service; and all connection points between systems. Insofar as this application seeks action by the Secretary regarding all eligible plants in PJM, the type of map specifically requested is not relevant to this application. Nonetheless, Applicants attach as Attachment C a map of the PJM territory, and as Attachment D a map of Applicants' nuclear and coal-fired generating facilities. In addition, attached as Attachment E is a map issued by the PJM Market Monitor showing actual and planned retirements generating units from 2011 through 2020.

- n) An estimate of the construction costs of any proposed temporary facilities and a statement estimating the expected operation and maintenance costs on an annualized basis. Applicants respectfully submit that such information is not applicable to the present application. Due to the nature of Applicants' requested relief, there are no anticipated construction costs, and annualized operation and maintenance costs will remain roughly the same for subject facilities.

F. Requested Order

Applicants respectfully request that DOE issue an emergency order directing (i) the subject baseload nuclear and coal-fired generators to enter into contracts and all necessary arrangements with PJM, on a plant-by-plant basis, to generate, deliver, interchange, and transmit electric energy, capacity, and ancillary services to maintain fuel diversity and grid dependability and resiliency within the PJM region and (ii) PJM to pay such qualifying generating facilities just and reasonable cost-based rates that provide for full cost recovery consistent with ratemaking standards and principles or as otherwise necessary to ensure continued operations. In addition, the order should direct PJM to begin negotiating immediately with such generators on the terms of such supply.

Applicants respectfully request that each baseload generator eligible to participate—nuclear and coal-fired generators located within the PJM footprint that have a supply of fuel on-site sufficient to allow twenty-five (25) days of operation at full output, that are substantially compliant with all applicable federal, state, and local environmental laws and regulations, and that do not recover any of their capital or operating costs through rates regulated by a duly authorized state regulatory authority, municipal government, or energy cooperative—be compensated with just and reasonable rates that provide for full recovery of its fully allocated costs and a fair return on equity. The compensable costs used to establish this amount shall include, but are not necessarily limited to, operating expenses, costs of capital and debt, and a fair return on equity and investment. Just and reasonable rates shall provide for (a) full cost recovery consistent with ratemaking standards and principles or (b) full recovery of all costs necessary to ensure continued operations.¹⁷² If PJM and the owners are unable to agree to the contractual terms within fifteen

¹⁷² Certain nuclear and coal-fired units have, for financial reporting purposes, impaired the generating asset values based on the expectation that market revenues would not be sufficient to provide a return of and on invested capital. The fact that these assets were impaired for financial reporting purposes does not change the amount that was invested in the plant nor does it relieve their owners from their obligations to bondholders. As a result, the traditional cost-of-service model needs to be modified to allow cost recovery based on pre-impairment asset

(15) days of the issuance of the order, then Applicants request that the Secretary step in and determine the just and reasonable compensation and conditions.

Applicants request that payments begin on the effective date of each contract, and service under the contracts begin no later than sixteen (16) days after the issuance of the Order. If no agreement as to terms has been reached by this time, then the payment that the eligible generators receive for such service will be subject to true-up based on the just and reasonable rate that is ultimately prescribed.

Applicants request that the order become effective immediately and that, at a minimum, the order should remain in effect for four (4) years from the date of issuance or until the Secretary determines that the emergency has ceased to exist because the PJM markets have been fixed to properly compensate these units for the resiliency and reliability benefits that they provide, whichever is later.¹⁷³ Further, because the eligible nuclear and coal-fired generators must continue to substantially comply with all applicable federal, state, and local environmental laws and regulations, the provision in Section 202(c) limiting the duration to a 90-day period is not applicable.¹⁷⁴

values or it needs to be modified to allow a return on equity on the post-impairment asset value with an additional allowance for recovery of maturing debt in addition to interest expense.

¹⁷³ The Secretary has very broad authority to order “temporary connections of facilities and such generation, delivery, interchange, or transmission of electric energy as in [his] judgment will best meet the emergency and serve the public interest.” 16 U.S.C. § 824a(c)(1). As prior 202(c) orders reflect, “temporary” emergencies may vary greatly in length and may even be open ended. Indeed, in *Cross-Sound Cable*, the Secretary initially issued an order with a duration from August 14, 2003 until September 1, 2003, but later extended the order “until such time as the emergency identified in this order cease[d] to exist” Order No. 202-03-2 (Dep’t of Energy Aug. 28, 2003). In addition, the Secretary’s initial order to Mirant Corporation in 2005 lasted nearly 10 months. Order No. 202-05-3, *D.C. Pub. Serv. Comm’n*, Docket No. EO-05-01, at 10 (Dep’t of Energy Dec. 20, 2005).

¹⁷⁴ See 16 U.S.C. § 824a(c)(4)(A) (limiting the duration of a Section 202(c) order to 90 days if such order “may result in a conflict with a requirement of any Federal, State, or local environmental law or regulation”).

III. CONCLUSION

The time for talk is over. We find ourselves at a crisis point where significant baseload generation will cease to exist in RTO markets without quick and decisive intervention. Baseload generation does not have the luxury of time; the personal health and safety, economic development, jobs and livelihood of the communities where they are located, as well as our national security, hang in the balance.

It would also be a grave mistake to assume that there is no immediate emergency requiring immediate action now that winter is over. Premature nuclear and coal-fired plant closures know no season—as the announcement yesterday that FirstEnergy Solutions will deactivate over 4,000 MW of nuclear generation shows. The resilience and security of the electric grid can be jeopardized at any moment by any high-impact event—not just those that are weather driven. The health, safety, and welfare of the Nation, as well as our economic and physical well-being must be protected at all times from all potential threats to our electric grid.

As explained herein, Applicants respectfully request that the Secretary utilize the authority granted to DOE under Section 202(c) of the Federal Power Act and immediately issue the emergency order described above. Such quick and decisive intervention is necessary to avoid a crisis point where such baseload generation will cease to exist in RTO markets, and to ensure that nuclear and coal-fired generators operating within PJM are compensated fairly for their costs and the benefits that they provide such that they can continue to operate and ensure a dependable, affordable, safe, secure, and clean supply of electricity.

Respectfully submitted,

March 30, 2018

VIA FACSIMILE

The Honorable James Richard Perry
Secretary of Energy
United States Department of Energy
1000 Independence Avenue, SW
Washington, DC 20585

Re: DOE Docket No. EO-18-__

Dear Secretary Perry:

Please find enclosed the Comments in Support and Motion to Intervene of Allegheny Energy Supply Company, LLC ("AE Supply") in response to the Request for Emergency Order Pursuant to Federal Power Act Section 202(c) submitted March 29, 2018, by FirstEnergy Solutions Corp. ("FES").

Thank you for your attention to this matter. Please direct any questions to the undersigned.

Sincerely,

/s/ James R. Hancy

James R. Hancy
President
Allegheny Energy Supply Company, LLC

Rick C. Giannantonio, General Counsel, FirstEnergy Solutions Corp.

Enclosure

**IN THE UNITED STATES OF AMERICA
BEFORE THE DEPARTMENT OF ENERGY**

Request for Emergency Order Pursuant to)
Federal Power Act Section 202(c) of)
FirstEnergy Solutions Corp.)

Docket No. EO-18-__

**COMMENTS IN SUPPORT AND MOTION TO INTERVENE
OF ALLEGHENY ENERGY SUPPLY COMPANY, LLC**

Allegheny Energy Supply Company, LLC (“AE Supply”) files these Comments in support of the “Request for Emergency Order Pursuant to Federal Power Act Section 202(c)” submitted March 29, 2018, by FirstEnergy Solutions Corp. (the “FES Application”).¹ As detailed herein, AE Supply supports the FES Application and respectfully asks the Secretary of Energy (“Secretary”) to exercise his authority under Section 202(c) of the Federal Power Act² to grant the requested relief as soon as possible. In addition, as set forth in Section 2 below, AE Supply respectfully moves to intervene in this proceeding and asks that it be permitted to participate fully as an interested party thereto.³

1. COMMENTS IN SUPPORT

AE Supply respectfully asks the Secretary to promptly grant the FES Application. As established by the FES Application, an emergency exists in PJM Interconnection L.L.C. (“PJM”) within the meaning of Section 202(c) that warrants immediate and decisive action by the Secretary. Yet, as explained by FES:

PJM has done little to prevent this emergency despite the numerous signs for many years that the emergency was coming. Nuclear and

¹ FirstEnergy Solutions Corp. et al., Request for Emergency Order Pursuant to Federal Power Act Section 202(c), DOE Docket No. EO-18-__ (Mar. 29, 2018) (“FES Application”).

² 16 U.S.C. § 824a(c).

³ See 10 C.F.R. § 205.370 (“Requests for action under these regulations will be accepted from any ‘entity,’ State Public Utility Commission, State Energy Agency, or State Governor.”) (emphasis added). Allegheny Energy is an “entity” as that term is used in this regulation. See *id.*

(Cont’d on next page)

coal-fired generators in PJM have been closing at a rapid rate—putting PJM's system resiliency at risk—and many more closures have been announced. PJM continues to claim that all is well with its system, but at the same time shows it does not have a clear view of what resilience is, how to measure it, or how to ensure it. PJM has demonstrated little urgency to remedy this problem any time soon—so immediate action by the Secretary is needed to alleviate the present emergency.⁴

AE Supply is the owner of the 1,368 MW Pleasants Power Station located in Willow Island, WV. The Pleasants Power Station sells all of its output into the PJM markets and thus depends entirely on these markets to compensate it for its costs.

But these markets consistently fail to compensate baseload nuclear and coal-fired generators such as the Pleasants Power Station for the value they provide in terms of fuel security, reliability, and resiliency to the electric grid. As the Secretary has recognized, “[b]ecause wholesale pricing in . . . markets [overseen by the Federal Energy Regulatory Commission] does not adequately consider or accurately value those benefits, generation units that provide the benefits are often not fully compensated for them.”⁵ A recent DOE study similarly summarized the problem as follows: “Markets do not currently compensate resilience, and thus that capability is steadily diminishing due to competitive pressures of ongoing, baseload power plant early retirements.”⁶

This lack of appropriate compensation has resulted in *AE Supply providing official notice to PJM last month of its intent to deactivate its Pleasants Power Station by year end*. Such a

⁶ NAT’L ENERGY TECH. LAB., RELIABILITY, RESILIENCY AND THE ONCOMING WAVE OF RETIRING BASELOAD UNITS VOLUME I: THE CRITICAL ROLE OF THERMAL UNITS DURING EXTREME WEATHER EVENTS 3 (Mar. 13, 2018) (“NETL Report”), available at <https://www.netl.doe.gov/research/energy-analysis/search-publications/vuedetails?id=2594>.

(Cont’d on next page)

shutdown will have a severe adverse impact on the State of West Virginia and its citizens as it provides \$400 million in annual economic impact to West Virginia, and supports 600 direct and indirect jobs.⁷

But these problems are in no way limited to the Pleasants Power Station. Rather, numerous baseload plants in PJM have announced that they are financially challenged and are closing or contemplating closure:

- It is a matter of public record that AE Supply's affiliate FirstEnergy Solutions Corp., which indirectly owns 12,300 MW of generation, likely will file for bankruptcy by the end of March 2018.⁸ Multiple plants are at risk for permanent closure as a result of this expected action.⁹
 - FirstEnergy Solutions submitted notices to PJM on March 28, 2018, that it would deactivate its three nuclear plants, Davis-Besse (908 MW), Perry (1,268 MW), and Beaver Valley (1,872 MW), by 2021.
 - FirstEnergy Corp. announced that Units 5–7 at the W.H. Sammis coal-fired plant (1,490 MW) are in danger of being closed. The company previously announced that Units 1–4 (720 MW) will close by May 2020.
 - FirstEnergy Corp. has announced that the 2,510 MW Bruce Mansfield coal-fired plant is at risk of closure due to the exposure to changing market conditions.
- Dayton Power & Light has announced the closure by June 2018 of the J.M. Stuart coal-fired plant (2,318 MW) and the Killen Station Unit 2 coal-fired plant (600 MW), citing market conditions making the plants not economically viable. Stuart Unit 1 was closed even earlier, on September 30, 2017.
- Owners of the 1,884 MW Homer City coal-fired power plant attempted to sell the plant in 2016, but were unable to find a buyer; Standard & Poor's analysts cite lower power prices and increasing expenses as driving forces behind the facility's ills.

⁷ W. Va Pub. Serv. Comm'n, Initial Brief of Monongahela Power Company and The Potomac Edison Company at 2, Case No. 17-0296-B-PC (Oct. 19, 2017).

⁹ See FES Application at 20-22.

- Exelon has announced that it will close the Oyster Creek nuclear plant (608 MW) in October 2018—a decade before the end of its operating license—citing negative economic factors.
- Exelon has announced the premature closure of the 837 MW Three Mile Island nuclear power plant in September 2019, citing deteriorating economic value.

But these and other baseload nuclear and coal-fired power plants are an integral part of the PJM electric grid and their loss must stop immediately in PJM or the grid will be placed at risk of failure through a lack of generation diversity and over-reliance on generating units that lack secure fuel supply. Such generating units with on-site fuel kept PJM from shedding load during the 2014 Polar Vortex when available generating capacity was only a hair's width more than demand. And such units were critical to keeping the grid supplied during the severe cold weather in the East this past winter.

Indeed, the cold weather in the East from December 27, 2017, through January 8, 2018, provided a real-time, real-life demonstration as to why immediate action is so critical to ensure the health and safety of the Nation. During that period, the eastern U.S. saw extremely cold temperatures and spiking electric demand, but nuclear and coal-fired generators rose to the task and supplied an exceptional amount of the energy needed to meet this demand. The Pleasants Power Station was no exception, having operated near full capacity during the entire period of December 27, 2017, to January 8, 2018, and even delayed a maintenance outage planned for the last week of the year so that it could run during this time of severe need.

If not for the over-performing nuclear and coal-fired generating plants in PJM,¹⁰ the eastern portion of the country would likely have seen grid reliability impacts, as natural gas plants significantly underperformed in large part due to natural gas price spikes and supply

¹⁰ See FES Application at 3-4 n.17.

(Cont'd on next page)

interruptions.¹¹ As the recent DOE study of this cold weather event found, nuclear and coal-fired generation provided 70 percent of output during the event and “coal units in PJM were uniquely positioned to provide the resilience needed at this critical point in time,” providing “74 percent of incremental energy.”¹² The study went on to conclude that:

In the case of PJM, it can also be shown that the demand could not have been met without coal. At peak demand, January 5, 2018, natural gas prices exceeded \$95/MMBtu in eastern PJM. Had coal been removed, a 9-18 GW capacity shortfall would have developed, depending on assumed imports and generation outages, leading to system collapse.¹³

But the tangible and important benefits that Pleasants and other coal-fired generators provided will not be available the next time demand spikes or natural gas supply experiences disruptions if the current trend of premature, economic retirement of coal-fired generating facilities continues. The DOE’s Energy Information Administration “projects 41 GW of coal and 10 GW of nuclear retirements by 2025,” but this projection does not “adequately capture[] the risk” of retirements.¹⁴ The recent DOE study further projects that “as much as 75 GW of coal[-fired generation] could be retired” by 2025, and notes that another source estimates between “30 [and] 50 GW of nuclear could face retirement.”¹⁵ Without these plants, thousands if not millions of customers could have been without power during this recent weather event.

Unless immediate and decisive action is taken by the Secretary, these retirements will place the electric grid at risk of failure through a lack of generation diversity and over-reliance on generating units—such as those fueled by natural-gas and renewable resources—that lack secure

¹¹ See *id.* at 4 n.18.

¹² NETL Report at 12.

¹³ *Id.* at 17 (emphasis added).

¹⁴ *Id.* at 25.

¹⁵ *Id.* at 30.

fuel supply. There is a place of course for natural gas and renewable generation, but over-reliance on such resources will place the grid at risk of failure. As the Secretary stated recently, "America's greatness depends on a reliable, resilient electric grid powered by an 'all of the above' mix of generation resources" that "must include traditional baseload generation with on-site fuel storage that can withstand major fuel supply disruptions caused by natural and man-made disasters."¹⁶ Indeed, "[o]ur economy, government and national defense all depend on electricity. Therefore, ensuring a reliable and resilient electric supply and corresponding supply chain are vital to national security."¹⁷

Nuclear and coal-fired generation are an integral part of that supply chain and immediate action by the Secretary is needed to ensure that they remain so. Accordingly, AE Supply urges the Secretary to grant the FES Application as soon as possible.

2. MOTION TO INTERVENE

AE Supply respectfully moves to intervene in this proceeding and be permitted to participate fully as a interested party thereto. As described above, AE Supply owns and operates Pleasants, an at-risk, merchant coal-fired generating facility in the PJM footprint that falls within the scope of facilities for which the FES Application seeks an emergency order by the Secretary pursuant to Section 202(c) of the Federal Power Act to remain operational and not shut down. Accordingly, AE Supply has an immediate and direct interest in this proceeding that cannot be adequately represented by any other person, party, or entity. Thus, AE Supply respectfully moves to intervene in this proceeding and be permitted to participate fully as an interested party thereto.

¹⁶ Letter from Rick Perry, U.S. Sec'y of Energy, to Chairman & Comm'rs of FERC at 1 (Sept. 28, 2017).

¹⁷ *Id.* at 2.

3. CONCLUSION

WHEREFORE, for the foregoing reasons, AE Supply: (a) respectfully requests that the Secretary grant FES' request for an emergency order and (b) moves to intervene in this proceeding and be permitted to participate fully as an interested party thereto.

Respectfully submitted,

/s/ James R. Haney

Catherine.Jereza@hq.doe.gov

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

On behalf of the Environmental Defense Fund ("EDF") and the Natural Resources Defense Council ("NRDC"), we write to object to First Energy Solutions Corp.'s request for an emergency order under section 202(c) of the Federal Power Act. NRDC and EDF are national environmental advocacy organizations with millions of members and activists across the country, including in Ohio and the PJM service territory who would be harmed by the costs and environmental and public health impacts of such an order.

On March 29, 2018, FirstEnergy Solutions Corp. (“FirstEnergy” or “FES”) formally requested a section 202(c) of the Federal Power Act (“FPA”) emergency order.¹ FES requests that all merchant coal and nuclear generating units in the PJM Interconnection (“PJM”) footprint (all or parts of 13 states and Washington D.C.) with at least 25 days of onsite fuel be provided non-market, cost-of-service rates and guaranteed profits for at least four years (the “profit guarantee request”). FirstEnergy argues that its profit guarantee request is necessary to ensure resilience, despite the Federal Energy Regulatory Commission (“FERC”) recently dismissing this same issue and proposal, finding that “the extensive comments submitted by the RTOs/ISOs do not point to any past or planned generator retirements that may be a threat to grid resilience.”² PJM’s has reaffirmed this finding recently, stating in response to FES’s request that “[t]his is not an issue of reliability. There is no immediate emergency,”³ and that “[n]othing we have seen suggests there is any kind of emergency from these units retiring.”⁴

FES’s profit guarantee request suffers from already examined and dismissed errors and fundamental deficiencies. Namely, the request: (1) is premised on legal flaws; (2) ignores prior and current FERC activity and finding; (3) would impose enormous cost upon American homes and businesses without benefit; and (4) undermine the competitive marketplace. For these reasons, EDF and NRDC agree with the assessments of others, including Sierra Club, the Advanced Energy Economy, the American Council on Renewable Energy, the American Forest & Paper Association, the American Petroleum Institute, the American Wind Energy Association, the Electric Power Supply Association, the Electricity Consumers Resource Council, the Independent Petroleum Association of America, the Interstate Natural Gas Association of

¹ Letter from FirstEnergy Solutions Corporation to the Honorable James Richard Perry (Mar. 29, 2018) (hereinafter “FirstEnergy”).

² *Grid Reliability and Resilience Pricing*, 162 FERC ¶61,012, at P 15 (2018), FERC Docket RM18-1-000 at paragraph 15. Both the FirstEnergy profit guarantee request and proposal at issue before FERC in RM18-1 centered upon an out-of-market cost-of-service plus profit guarantee for resources with onsite fuel, a condition only coal and nuclear assets are able to meet. Both proposals likewise based the rationale for the guarantee on a need to ensure grid resilience. FirstEnergy’s profit guarantee request departs from that at issue in RM18-1 by requesting action only on assets in the PJM footprint (rather than in other RTO/ISOs with capacity markets) and by reducing the onsite fuel requirement to 25 days (rather than 90 days).

³ PJM Statement and Letter to U.S. DOE Secretary Perry.

⁴ Scott DiSavino & Valerie Volcovici, *FirstEnergy seeks emergency lifeline for U.S. nuclear, coal plants*, REUTERS (Mar. 29, 2018, 12:10 PM), <https://www.reuters.com/article/us-firstenergy-nuclear-coal/firstenergy-seeks-emergency-lifeline-for-u-s-nuclear-coal-plants-idUSKBN1H52ET> (quoting PJM’s Senior Vice President Vincent Duane).

America, the Natural Gas Supply Association, the Solar Energy Industries Association, and PJM, that FirstEnergy's request is problematic and flawed.⁵

EDF and NRDC therefore urge the Department to reject FirstEnergy's profit guarantee request.

1. PJM is not facing an emergency and FES's attempt to use Section 202(c) is unlawful.

Section 202(c) expressly is limited to "emergencies" or other "sudden" events.⁶ The Department acknowledges on its own website that Section 202(c) only enables it to impose temporary measures due to an "emergency" or other "sudden" circumstance.⁷ While Section 202(c) does not define either "emergency" or "sudden," the dictionary definitions of these words reinforce that they mean an imminent crisis that is often unexpected.⁸

The so-called "emergency" that FES raises in its profit guarantee request is nothing of the sort. The nuclear facility closures upon which FES primarily relies are scheduled to retire 2-3 years from now.⁹ The other examples are no more convincing. First, FES cites facilities that *may* retire¹⁰—a mere possibility does not rise to an imminent crisis. Second, FES cites facilities that retired in 2017 or announced their future retirement in March 2017. What FES ignores is that in June 2017, PJM *itself* sought Section 202(c) authority to keep the Yorktown coal-fired units

⁸ See "Emergency," BLACK'S LAW DICTIONARY 2d Ed., <https://thelawdictionary.org/emergency/> ("Situation requiring immediate attention and remedial action. Involves injury, loss of life, damage to property, or catastrophic interference with the [*sic*] normal activities. A sudden, unexpected, or impending situation"); "Sudden," OXFORD ENGLISH DICTIONARY ONLINE, <https://en.oxforddictionaries.com/definition/sudden> ("Occurring or done quickly and unexpectedly or without warning.").

⁹ FirstEnergy at 8, 20 (noting that Davis-Besse, Perry, and Beaver Valley are scheduled to retire in 2020 or 2021).

¹⁰ *Id.* at 21 (noting that units at the W.H. Sammis coal-fired plant "are in danger of being closed.")

online,¹¹ and yet it did not feel compelled to file a similar request here or for the incidents cited by FES. This is likely because it, too, recognizes that there is no “emergency” or “sudden” event requiring a handout to coal and nuclear generation. As noted by PJM:

PJM does not believe that operating outside of the market to preserve a particular class or type of generation is needed at this time for reliability. The markets have been resilient in attracting new investment. In addition, a variety of tools exist as a backstop should specific generation be needed in a particular area.¹²

While FES selectively quotes PJM’s assertions about the role coal and nuclear generation played during recent weather events in an effort to support its facilities’ necessity,¹³ PJM’s comments only reinforce the lack of “emergency” present here, given that, notwithstanding these assertions, PJM has not deemed the FES closures to be an “emergency” requiring Section 202(c) action.¹⁴ FES also ignores PJM’s statements that its “operations and planning processes [have] ensure[d] margins on the system [that] are robust enough to operate through extreme weather scenarios.”¹⁵

Case law further supports that FES’s profit guarantee request does not identify a basis for an “emergency” under Section 202(c). For example, in *Richmond Power & Light v. FERC*, in response to the 1973 oil embargo, the Commission chose not to invoke its emergency authority, despite concerns of “dire oil shortfalls.”¹⁶ As noted by the D.C. Circuit in upholding the Commission’s decision:

We are fully mindful, of course, that current national policy is to discourage reliance on foreign oil, but we cannot fault the Commission for reading Section

¹⁶ *Richmond Power & Light v. FERC*, 574 F.2d 610, 613 (D.C. Cir. 1977).

202(c) as devoid of a solution. *That section speaks of ‘temporary’ emergencies, epitomized by wartime disturbances, and is aimed at situations in which demand for electricity exceeds supply and not at those in which supply is adequate but a means of fueling its production is in disfavor.*¹⁷

The situation described in *Richmond Power & Light* is precisely the type of situation at issue here: inefficient and old coal and nuclear generation are now uneconomic in PJM’s competitive markets and PJM and FERC repeatedly have confirmed that there is not a reliability crisis. As stated by PJM, FirstEnergy’s profit guarantee request is not based on an emergency nor reliability or resilience crisis and instead “fundamentally a corporate issue.”¹⁸ FES’s interest in a bailout for coal and nuclear generation, particularly its own, is not basis for a Section 202(c) order.

2. FirstEnergy seeks to undermine the recent FERC decision and ongoing FERC resilience docket

FirstEnergy’s profit guarantee request substantially mirrors the Grid Resiliency Pricing proposal that FERC unanimously rejected less than three months ago, finding there was no urgent threat to the grid’s reliability.¹⁹

Like that proposal, the FirstEnergy profit guarantee request asks for utility customers to pay above-market “cost-of-service” rates (including a guaranteed profit) to owners of all merchant coal and nuclear generating units with a certain amount of on-site fuel on the theory that those assets are necessary for resilience.

FirstEnergy’s rationale and favored outcome has been rejected. FirstEnergy had opportunity to ask for the reconsideration it seeks now before DOE, but declined to request rehearing at FERC on its January 8 order rejecting the Grid Resiliency Pricing proposal. Instead, FirstEnergy seeks to re-litigate the same issues at DOE without confronting the large body of record evidence amassed at FERC from industry, experts, RTOs and ISOs, states, and other stakeholders demonstrating that the relief FES requests is unnecessary and unrelated for reliability or resilience and would result in unjust and unreasonable rates as well as undue discrimination.

Although FERC found no urgent threat to the grid’s reliability to justify the extraordinary action proposes again now, it did initiate an administrative proceeding to better define and

¹⁷ *Id.* at 615 (emphasis added) (internal citations omitted).

¹⁹ Reliability and Resilience Pricing, Order Terminating Rulemaking Proceeding, Initiating New Proceeding, and Establishing Additional Procedures, 162 FERC ¶ 61,012 (Jan. 8, 2018).

understand resilience and determine whether additional steps are needed to ensure resilience.²⁰ FirstEnergy attempts to side-step and undermine that proceeding with its request to DOE.

Rather than confront the voluminous evidence and analysis presented before FERC, FirstEnergy relies primarily on a recently released National Energy Technology Laboratory report (“NETL Report”) that incorrectly concludes that power plants with onsite fuel were critical to preserving “resiliency” during the “Bomb Cyclone” in late December to early January.²¹ The NETL Report departs from the majority of studies on the subject. This departure is primarily due to a misinterpretation embedded in the report: that the fact that coal generation increased more in comparison to other forms of generation during stressful winter events was a sign that coal provided resiliency. The actual explanation is far simpler: there are many coal units that are rarely used due to their high-cost, and thus those coal plants are only used when demand is far higher than usual.²² This fundamental mistake is directly attributable to the fact that the report does not rigorously define or measure resilience.²³ In contrast, PJM’s analysis of its systems performance during that weather event shows that there is no looming “resiliency” crisis.²⁴

In fact, coal and nuclear don’t provide many of the reliability services the grid needs. Many types of generators far outperform coal and nuclear generators in their capability to provide

²³ <https://www.nrdc.org/experts/jennifer-chen/whats-resilience-doe-should-know-spending-your-mone>.

²⁴ PJM Interconnection, PJM Cold Snap Performance Dec. 28, 2017 to Jan. 7, 2018 (Feb. 26, 2018), available at <http://www.pjm.com/-/media/library/reports-notice/weather-related/20180226-january-2018-cold-weather-event-report.ashx>. PJM has also noted that it had 5,400 MWs of emergency demand response available during the Bomb Cyclone that it did not end up needing to utilize. U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Lisa Murkowski (Jan. 23, 2018).

services like flexibility, frequency regulation, and primary frequency response, as noted in a PJM chart included in DOE's August 2017 Staff Report.²⁵

PJM likewise disagrees with FES's position, stating that: "This is not an issue of reliability. There is no immediate emergency." ... "Diversity of the fuel supply is important, but the PJM system has adequate power supplies and healthy reserves in operation today, and resources are more diverse than they have ever been. Nothing we have seen to date indicates that an emergency would result from the generator retirements. The potential for the retirements has been discussed publicly for some time. In anticipation, PJM took a preliminary look at the effect of the retirements on the system. We found that the system would remain reliable. We have adequate amounts of generation available."²⁶

3. FirstEnergy Seeks to Impose Enormous Cost Upon the American Public

FirstEnergy seeks compensation for "operating expenses, costs of capital and debt, and a fair return on equity and investment." It specifically seeks cost and profit guarantees antithetical to how markets operate, with "full cost recovery consistent with ratemaking standards and principles or...full recovery of all costs necessary to ensure continued operations." FirstEnergy does not estimate in its application the amount of money it requests DOE take from the ratepayer and give to uneconomic coal and nuclear plants in PJM. However, because the profit guarantee request mirrors the already examined and denied proposal at issue before FERC in RM18-1-000, rough estimates are available.

Independent analysis found that guaranteeing costs and profits to coal and nuclear assets would potentially increase costs on consumers and businesses in PJM's retail choice states by \$8.1 billion annually, a roughly 19% increase in total costs.²⁷

4. FirstEnergy Seeks to Undermine Competitive Markets

FirstEnergy's profit guarantee request asks that coal and nuclear plants in PJM be provided a non-market cost-of-service plus profit rate. This rate would be substantially higher than what a competitive marketplace provides. Higher prices are inherent to the profit guarantee request; as FirstEnergy previously explained in 2011, "competition is the best way to offer lower

generation prices to customers, increased productivity and efficiencies from existing generating facilities, provide the appropriate market signals regarding the need for new generation, and promote jobs and economic growth.”²⁸

Although FirstEnergy no longer agrees with its own statement, FERC continues to favor competitive marketplaces to ensure a reliable, resilient electric grid at just and reasonable rates on the basis of “substantial and well-documented economic benefits that these markets provide to consumers.”²⁹ By seeking out-of-market profit guarantees for an entire class of resources throughout PJM’s territory, FirstEnergy strikes at the core of FERC’s statutory mission and mandate by seeking to substantially (if not fatally) impair competitive wholesale markets. Such a sweeping refutation of competitive markets would not only undermine a policy meant to protect the public interest but also the investment decisions made throughout the energy sector.

FirstEnergy’s profit guarantee request suggests that it no longer believes in competitive markets, citing to already raised and denied argument.³⁰ FirstEnergy’s assertion to this effect, as described above, has thus already been heard, considered, and found to be inaccurate. Improvements to wholesale markets are possible, but generally over-, not under-procurement has been consistently observed.³¹ Nor does FirstEnergy’s repeated request suggest that market structures are so fundamentally flawed that FERC’s reliance upon markets is misplaced; indeed, “[a]s part of its ongoing oversight of wholesale electric markets, the Commission continues to evaluate its current rules and has issued several orders to ensure that our rates in our markets remain just and reasonable and not unduly discriminatory or preferential.”³² Because of this, “[t]he Commission’s endorsement of markets does not conflict with its oversight of reliability, and the Commission has been able to focus on both without compromising its commitment to either.”³³

Washington D.C. 20585
Catherine.Jereza@hq.doe.gov

Dear Secretary Perry and Deputy Assistant Secretary Jereza,

On March 29, 2018, FirstEnergy Solutions Corp. ("FirstEnergy" or "FES") submitted a request for an emergency order pursuant to, *inter alia*, Section 202(c) of the Federal Power Act. FirstEnergy requests an order from the Department of Energy that would require utility customers to pay above-market cost-of-service rates, including a guaranteed profit, for at least four years to owners of merchant coal and nuclear generating units in PJM. FirstEnergy contends that these payments are essential to ensure "resiliency" in the PJM system and avoid an "emergency" under the extraordinary circumstances outlined in Section 202(c). No such emergency exists: FirstEnergy has failed to show that resiliency is at risk, or that its coal and nuclear units—which may be retired over the next seven years—are essential to ensuring such resiliency.

The Environmental Law and Policy Center¹ ("ELPC") has a substantial interest in this matter and would be adversely affected by an order granting FES' Section 202(c) request. ELPC has members throughout the Midwest, including those residing in PJM's service territory. If

¹ ELPC is a public interest environmental legal advocacy and eco-business innovation organization working throughout the Midwest states to improve environmental quality and protect natural resources in the Midwest on behalf of our organization, members and clients. ELPC works to avoid risks and injuries to public health, clean water, clean air and landscapes in ways that are good for the environment and good for the economy.

DOE-17-0427-B-000974

granted, FES' proposed order would raise electricity bills for these members, directly undermining ELPC's mission to promote affordable clean energy throughout the Midwest. While ELPC reserves the right to expand on its objections to FES' request, the fast track requested by FES merits this immediate response.²

First, it is clear that there is no emergency in PJM. PJM is reliable and will remain so for the foreseeable future. FES' allegations of an emergency situation in the PJM market are directly contradicted by PJM itself. As stated by PJM spokeswoman Susan Buehler:

This is not an issue of reliability. There is no immediate emergency. Diversity of the fuel supply is important, but the PJM system has adequate power supplies and healthy reserves in operation today, and resources are more diverse than they have ever been. Nothing we have seen to date indicates that an emergency would result from the generator retirements.³

Second, FES blames the market for undercompensating what are, in truth, uneconomical resources. The company's desire to continue operating its nuclear and coal facilities by forcing customers to pay higher prices is not in the national interest – it is in FirstEnergy's interest. The American Petroleum Institute succinctly captured the detrimental impact of FirstEnergy's proposal:

"FirstEnergy needs to stop misleading the public and government officials about the status of its power plants in Ohio and Pennsylvania," said API Market Development Group Director Todd Snitchler (and former chairman of the Public Utilities Commission of Ohio.) "FirstEnergy's latest attempt to spread a false narrative surrounding the reliability of the electric grid is nothing more than a ruse that will force Main Street consumers to pay higher prices."⁴

All available evidence contradicts FirstEnergy's efforts to invent an "emergency" where none exists. PJM is ensuring system reliability and resiliency, and there is no basis for disrupting its system to prop up FirstEnergy's aging nuclear and coal units.

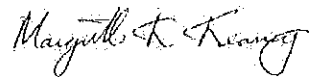

For the foregoing reasons, ELPC respectfully requests that the Department of Energy promptly deny the application of FirstEnergy Solutions for emergency relief under Section 202(c) of the Federal Power Act.

² By notifying the Department of its objection to FES' request, ELPC does not waive, and explicitly preserves, any rights before the Department of Energy, the Federal Energy Regulatory Commission, or any other federal agency and in any court with jurisdiction over matters arising from or related to FES's request.

VIA COURIER

The Honorable James Richard Perry
Secretary of Energy
U.S. Department of Energy
1000 Independence Avenue, S.W.
Washington, DC 20585

Re: Joint Request of the Energy Industry Trade Associations for Notice-and-Comment Procedures Regarding the March 29, 2018 Request of First Energy Solutions for an Emergency Order Pursuant to Section 202(c) of the Federal Power Act

Dear Secretary Perry:

The Advanced Energy Economy, the American Council on Renewable Energy, the American Forest & Paper Association, the American Petroleum Institute, the American Wind Energy Association, the Electric Power Supply Association, the Electricity Consumers Resource Council, the Independent Petroleum Association of America, the Interstate Natural Gas Association of America, the Natural Gas Supply Association, and the Solar Energy Industries Association (collectively, “Joint Industry Commenters”) hereby respectfully submit this joint request that the Secretary of Energy establish notice-and-comment procedures with respect to the March 29, 2018 request (the “March 29 Request”) of FirstEnergy Solutions (“FE Solutions”) for issuance of an order pursuant to Section 202(c) of the Federal Power Act (the “FPA”).¹ In the March 29 Request, FE Solutions asks the Secretary to require PJM Interconnection, L.L.C. (“PJM”) to pay certain nuclear-powered and coal-fired generators “cost-based rates that provide for full cost recovery”² As was well-documented in the recent proceeding before the Federal Energy Regulatory Commission (“FERC”) initiated by the Secretary’s October 10, 2017 proposed rulemaking on grid resilience pricing,³ such action would have far reaching implications for the PJM markets and for a broad spectrum of parties, including those represented by the Joint Industry Commenters. It is, therefore, imperative that all stakeholders be afforded notice, and a meaningful opportunity to be heard, before any favorable action is taken on the March 29 Request.⁴

¹ 16 U.S.C. § 824a(c) (2017).

² March 29 Request at 31.

³ See *Grid Resilience Pricing Rule*, Notice of Proposed Rulemaking, 82 Fed. Reg. 46,940 (Oct. 10, 2017) (the “October 10 NOPR”).

⁴ Naturally, the Joint Industry Commenters would not object to the Secretary’s rejection of the March 29 Request without notice and comment.

The purported problem prompting the March 29 Request is the same one that was the subject of the Secretary's October 10 NOPR.⁵ On January 8, 2018, FERC issued an order terminating that rulemaking and initiating a separate proceeding in order "to examine holistically the resilience of the bulk power system."⁶ FERC held that none of the participants in the rulemaking, including FE Solutions, which filed extensive comments, had demonstrated that existing tariffs were unjust and unreasonable or that the proposed cost-based rates for select generators were just and reasonable.⁷ FERC also relied on "extensive comments" from PJM and other system operators which identified no "past or planned generator retirements that may be a threat to grid resilience."⁸ By its March 29 Request, FE Solutions is asking the Secretary to second-guess FERC's expert findings on a record substantially less developed than that in the FERC proceeding. This is particularly problematic where the proposed remedy is concerned, because Section 202(c) of the FPA unambiguously requires that any compensation required by the Secretary be "just and reasonable."⁹ FE Solutions is also asking the Secretary to disregard the Department of Energy's own regulations, which clearly state that "economic factors relating to service . . . generally will not be considered as emergencies unless the inability to supply electric service is imminent."¹⁰ As recognized in the FERC proceeding and as discussed below, there is no imminent threat.

Even leaving aside the merits and assuming *arguendo* that the March 29 Request identifies a valid problem, FE Solutions's own conduct in response to the Commission's January 8 Order belies claims that there is any *immediate* problem requiring issuance of an order before affected parties have a meaningful opportunity to be heard. Specifically, FE Solutions did not avail itself of the opportunity to request rehearing of the January 8 Order within the 30 days prescribed by the FPA¹¹ and waited nearly three months to file the March 29 Request. It would be manifestly unreasonable and unfair to both other interested parties and the Secretary for FE Solutions to demand that the Secretary act without hearing from interested parties, including PJM, after having failed to exercise its right to request rehearing before FERC and waited nearly three months before challenging FERC's order through the March 29 Request to the Secretary.

It is also telling that the most immediate considerations underlying FE Solutions's March 29 Request are that FE Solutions: (1) "likely will file for bankruptcy by the end of March 2018"; and (2) has "already submitted notice to PJM that it would deactivate its nuclear

The Honorable James Richard Perry
March 30, 2018
Page 3

assets . . . in 2020 and 2021.”¹² Notwithstanding FE Solutions’s assertions to the contrary, these considerations both underscore the lack of urgency in this case. First, the near-term effect of a bankruptcy filing will be to decrease, not increase, the financial pressures on FE Solutions inasmuch as actions to collect pre-petition debts will be stayed, giving it a “breathing spell” while it reorganizes.¹³ While the bankruptcy filing may be an unwelcome event for FE Solutions and its stakeholders, that event only serves to lessen the immediacy of any alleged problem facing society arising from threatened retirements of its facilities. Second, threatened retirements that will not occur until 2020 and 2021 can hardly be said to present an issue so immediate as to justify denying affected parties the opportunity to comment and depriving the Secretary of the benefit of those parties’ input.¹⁴

For the foregoing reasons, the Joint Industry Commenters respectfully request that the Secretary establish notice-and-comment procedures before taking any favorable action on the March 29 Request. Specifically, the Secretary should provide for publication of a notice of the March 29 Request in the *Federal Register* and establish a comment period of at least 60 days. Such a comment period would be consistent with the requirements of Executive Order 12866, which states that “each agency should afford the public a meaningful opportunity to comment on any proposed regulation, which in most cases should include a comment period of not less than 60 days.”¹⁵

Thank you for your consideration of this matter.

Very truly yours,

Greg Wetstone

Re: FirstEnergy Solutions Corporation's Request for Emergency Order Pursuant to Federal Power Act Section 202(c)

Dear Secretary Perry:

Exelon Corporation ("Exelon") has received an application by FirstEnergy Solutions Corporation for an order pursuant to the emergency provisions of Section 202(c) of the Federal Power Act, 16 U.S.C. § 824a(c). The closure of FirstEnergy's three emissions-free nuclear plants will immediately erase the environmental benefits of more than 25 years of wind and solar development in the markets they serve. As the nation's largest producer of emissions-free energy, Exelon urges policymakers to prioritize reforms that fix widely acknowledged market rule flaws that unfairly disadvantage nuclear plants, which are an indispensable component of a resilient and secure electric grid and serve as economic engines for the communities they serve.

We note that PJM's response to the application suggests that traditional reliability analyses can be used to determine whether action by the Department is needed. *See* Letter from Vincent P. Duane to the Honorable James Richard Perry, March 30, 2018. However, both FERC and PJM have acknowledged that traditional reliability analyses do not encompass the resilience of supply. *See Grid Reliability and Resilience Pricing*, 162 FERC ¶ 61,012, at PP 22-24 (2018); Comments and Response of PJM Interconnection, L.L.C., FERC Docket No. AD18-7-000, at 4, 12-14 (March 9, 2018). Therefore, PJM's reliability evaluation is not dispositive of whether action is needed.

Exelon reserves its rights to supplement its response under 10 C.F.R. § 205.374, and provide any other information relevant to the requested action.

Sincerely,

Matthew E. Price

Re: Request for Emergency Order Pursuant to Federal Power Act Section 202(c)

Dear Secretary Perry:

FirstEnergy Solutions Corp. ("FES"), on behalf of its affiliates named in its March 29, 2018 Section 202(c) application (the "Application"), respectfully responds herein to the March 30, 2018 letter to you from PJM Interconnection, LLC ("PJM") regarding the Application. PJM appears to misunderstand the point of the Application and the action it seeks. Yet, at the same time, PJM's response reinforces the need for the emergency relief requested in it. And perhaps most tellingly, PJM, as it did before FERC, continues to ignore resiliency as a critical and separate component of electric grid security. Indeed, the word resiliency is nowhere even mentioned in its letter.

That PJM misunderstands the thrust of the Application is apparent in how it misstates the basis upon which FES requests the Secretary to act. The immediate emergency is not only the result of any individual plant retiring nor the result of the announced plant retirements of FirstEnergy Solutions' affiliates. The immediate emergency encompasses a far bigger problem that is the result of the combination of numerous plants that have already retired and many more that are likely to do so in the near future resulting in a permanent and irreparable loss of resiliency to the PJM-managed grid. By trying to narrowly frame the problem, PJM continues to assume away the legitimacy of this resiliency crisis.

PJM states that it will evaluate these specific deactivations but its calculus for evaluating the need for plants that have placed deactivation requests is overly narrow and does *not* evaluate resiliency. By its own admission, PJM focuses on "systemic adequacy" (i.e., capacity/load balance) and "local reliability issues, such as insufficient voltage support." In effect, PJM is asking the Secretary defer action on the Application and instead rely on a narrow process run by an entity that has admitted that it does not have a clear view of what resilience is, how to measure it, or how to ensure it.

As the Application explained, the PJM system must also be *resilient* if it is going to satisfy its obligation to maintain service to its customers. PJM fails to even acknowledge the need for system resiliency, let alone explain how it is seeking to maintain it. And insofar as PJM is not addressing the need for resiliency, emergency action by the Secretary is needed to do so.

Like they did before FERC, PJM continues to advocate for delay. Is continues to ask the Secretary (and FERC) to rely and trust its process. FES respectfully submits that allowing PJM

to continue to kick the can down the road is how we have arrived at this crisis. The time for action is now.

Respectfully submitted,

William S. Scherman

Subject: PJM Response to First Energy March 29 Request to the Secretary for Section 202 (c) Emergency Relief

PJM is submitting for the Secretary's consideration the attached letter in response to First Energy's March 29 request for emergency relief. In this response, PJM outlines the process it will be undertaking, consistent with its FERC-approved tariff, to review the reliability impacts from the announced deactivations. Accordingly, PJM requests the Secretary to hold First Energy's request in abeyance so that the Secretary may have the benefit of PJM's analysis of the reliability impacts, if any, associated with the announced deactivations.

Re: FirstEnergy Solutions' Request for Emergency Relief under Section 202 of the Federal Power Act

Dear Secretary Perry:

PJM Interconnection, LLC (PJM) respectfully seeks to submit this response to the above-referenced request filed by FirstEnergy Solutions and affiliates (FES) on March 29, 2018. While the PJM system presently is reliable by all measures, PJM will refrain, at this time, from responding to FES' assertion that an "emergency condition" will arise should certain FES nuclear plants and potentially certain FES coal plants retire in upcoming years as announced or threatened by the company.¹

PJM will not use this opportunity to express agreement or disagreement with several major points of argument advanced by FES; nor will we correct at this time several misstated facts presented by FES. Instead, PJM simply points out to the Secretary two very obvious and objective facts that relieve the Department from the need to take precipitous, immediate action to address FES' request.

First, whether FES' actions create a reliability concern that may threaten the stable and reliable operation of the grid, much less constitute an emergency within the meaning of Section 202(c) of the Federal Power Act, is a question that will be answered by a proscribed, detailed and regularly employed process found in Part V of the PJM Tariff. Consistent with the PJM Tariff, over the next 30 days, PJM will undertake a thorough analysis of its system to determine whether the announced retirements would present systemic adequacy issues or any local reliability issues, such as insufficient voltage support. Should any such finding result, the PJM Tariff provides an additional 60 days to work with FES and a range of tools available, including ordering transmission system upgrades and, if necessary, offering full cost of service compensation under Part V of the PJM Tariff to induce assets to remain temporarily on-line. Ultimately, PJM could also join FES in its instant request should other remedial options prove insufficient.

Second, PJM can state without reservation there is no immediate threat to system reliability. Indeed, the FES units that announced their expected retirement earlier this week, by their own disclosures, will remain operational in most cases until through May 2021. Moreover, these announcements are not binding – FES

¹ Curiously, the request purports to seek relief for the entire FES merchant fleet - and somehow on behalf of others - relief for *all* other coal and nuclear units in PJM, totaling over 80 generation units. PJM will evaluate the question of impaired reliability or an "emergency condition" based on actual facts – announced retirements – not on the company's general dissatisfaction with the PJM markets or its competitive position therein. Nor will PJM evaluate the impact of closure of other companies' plants unless or until owners of such plants raise the matter with PJM.

can elect to rescind this notice, or should assets be sold, a subsequent purchaser likewise may decide to continue to operate the units. But even assuming these units do in fact close as of the dates announced, PJM, FERC, and the Department of Energy will have ample time before then to take measures, which at the extreme might include the kind of relief sought in the instant request.

PJM therefore respectfully requests that the Secretary allow PJM's FERC-accepted process to unfold in an orderly manner and refrain from taking unnecessary, extraordinary and precedential immediate action as sought by FES. PJM will commit to sharing publicly (to the maximum extent possible), and in any event to the Department of Energy, our findings resulting from our 30-day process for evaluating the system implications of FES' announced retirements.

Thank you for considering PJM's perspective and suggestions.

Sincerely,

Vincent P. Duane

Catherine.Jereza@hq.doe.gov

Dear Mr. Perry and Ms. Jereza:

FirstEnergy Solutions Corp. ("FirstEnergy" or "FES") has submitted a request for an emergency order, pursuant to, *inter alia*, section 202(c) of the Federal Power Act. As envisioned by FirstEnergy, such order would result in utility customers paying above-market cost-of-service rates (including a guaranteed profit) for at least four years to the owners of all merchant coal and nuclear generating units in PJM that have at least 25 days' worth of onsite fuel. According to FirstEnergy, such payments are necessary to prop up those merchant coal and nuclear plants in order to ensure "resiliency" in the PJM system and avoid an "emergency" triggering the extraordinary powers of section 202(c). In reality, however, FirstEnergy has not shown that resiliency is at risk, or that the aging coal and nuclear units that may be retiring over the next seven years are needed to ensure such resiliency. Nor has FirstEnergy proposed a remedy that could be legally authorized under the Federal Power Act.

FirstEnergy's request here is nothing more than a slightly scaled down version of the Grid Resiliency Pricing proposal that the Federal Energy Regulatory

Commission (“FERC”) unanimously rejected less than three months ago. FirstEnergy has not and could not provide any basis for a different result to be reached here. As such, the Department can reject FirstEnergy’s legally flawed and factually unsupported request out of hand.

If the Department does not reject FirstEnergy’s request as not approvable on its face, we urge you to open up a formal docket, or undertake some other public proceedings to solicit public comments, so that the Department can reach a considered decision in this matter.¹ As set forth below, FirstEnergy’s application raises substantial legal and policy issues, will impose staggering costs on PJM ratepayers, and undermine competition and investor certainty in the PJM marketplace.

I. Procedure and Standing

In this letter, Sierra Club sets out its initial comments in response to FirstEnergy’s request. Should the Department not reject FirstEnergy’s request outright, we expect that it will open a docketed proceeding to address the request, as it did in response to the request from PJM Interconnection last year regarding the Yorktown units.² Sierra Club intends to fully participate in that proceeding through the submission of evidence and legal argument, and to seek rehearing should the Department issue an order outside the scope of its authority.

Sierra Club feels compelled to offer these initial comments only the day after FirstEnergy’s request was filed because, as FirstEnergy directly acknowledges in the request, it “likely will file for bankruptcy by the end of March 2018.”³ A bankruptcy filing may affect the rights of entities such as the Sierra Club to fully protect their interests in this matter.

Sierra Club has a substantial interest in this matter and would be adversely affected in numerous ways by an order along the lines of what FES proposes. FES’ proposed order would require PJM to negotiate contracts with dozens of coal and nuclear-power generation units across PJM’s territory, to provide those generation owners with recovery of all their costs, including a rate of return. These additional

¹ The Department has taken the position that its orders, under section 202(c), are “proceedings” within the meaning of section 313 of the Federal Power Act, 16 U.S.C. § 825l. That interpretation of the Act emphasizes the appropriateness of engaging in the procedural steps by which the Department conducts its other proceedings—most importantly, notice and an opportunity for interested parties to comment.

² DOE, Federal Power Act Section 202(c) – PJM Interconnection & Dominion Energy Virginia, 2017, at <https://www.energy.gov/oe/downloads/federal-power-act-section-202c-pjm-interconnection-dominion-energy-virginia-2017-0>.

³ FirstEnergy’s March 29, 2018 request to the Department at 8, 20.

costs would be passed on to PJM's ratepayers. The relief that FES seeks for all merchant units in PJM is extremely similar to that called for in the Grid Resiliency Pricing Rule last fall.⁴ That rule was projected to have costs of up to \$8.1 billion annually for PJM ratepayers.⁵

As of late 2016, Sierra Club had over 112,000 members who reside in the service territory of PJM and pay electricity bills to load-serving entities that buy power from PJM. These members would see higher electricity bills as a result of FirstEnergy's requested order. These financial harms to our members are germane to Sierra Club's mission, which includes addressing the quality of the human environment by promoting an affordable transition to clean energy. Sierra Club also has offices in PJM territory and is itself a ratepayer affected by any cost increases put in place as a result of an order responsive to FES' request.

In addition, Sierra Club members are affected by the pollution that will be produced by continued operations of coal-fired power plants that would otherwise retire in the near future. As described below, most of the retirements vaguely alluded to by FES are several years away. However, several units have already been cleared for retirement, such as FirstEnergy's Pleasants Power Station, which PJM has determined can close on January 1, 2019 without any adverse impacts on reliability.⁶ Sierra Club has members who are negatively affected by air and water pollution from Pleasants that would otherwise cease upon its deactivation, but would persist if the plant received additional compensation as envisioned in FES' request.

The Sierra Club has a demonstrated organizational commitment to the above-described interests. The Sierra Club's Beyond Coal Campaign seeks to reduce the pollution currently being produced by coal-fired power plants such as those that FES seeks to support. To that end, Sierra Club has participated in regulatory proceedings relating to all of the units listed in Attachment A to FES' request,

⁴ DOE, Notice of Proposed Rulemaking: Grid Resiliency Pricing Rule, available at <https://www.energy.gov/sites/prod/files/2017/09/f37/Notice%20of%20Proposed%20Rulemaking%20.pdf>.

⁵ See Robbie Orvis et al., The Department of Energy's Grid Resilience Pricing Proposal: A Cost Analysis (Oct. 2017), available at http://energyinnovation.org/wp-content/uploads/2017/12/20171025_Resilience-NOPR-Cost-Research-Note-UPDATED.pdf (Table 2: Annual Increase in Customer Costs by Region, Reading 4, Total).

⁶ Robert Walton, PJM greenlights FirstEnergy to deactivate coal plant units at Pleasants Power Station, UtilityDive (Mar. 22, 2018), at <https://www.utilitydive.com/news/pjm-greenlights-firstenergy-to-deactivate-coal-plant-units-at-pleasants-pow/519791/>.

seeking to mitigate their pollution, minimize costs that ratepayers must bear to support these plants, or both.

II. FirstEnergy's Application Does Not Describe Any Emergency Within the Meaning of Section 202(c) of the Federal Power Act.

1. Section 202(c) Confines Emergencies to Specific, Imminent Events.

Section 202(c) of the Federal Power Act provides the Department with authority over “the generation of electric energy” only “[d]uring the continuance of any war in which the United States is engaged,” or if “the [Department] determines that an emergency exists by reason of a sudden increase in the demand for electric energy, or a shortage of electric energy or of facilities for the generation or transmission of electric energy, or of fuel or water for generating facilities, or other causes.” 16 U.S.C. § 824a(c)(1). The statute’s use of the present text—that an emergency “exists”—demands, at a minimum, that an emergency be present, certain, and immediate, rather than distant and contingent.

That certainty and immediacy is inherent in the statute’s fundamental requirement—an “emergency.” The Act does not define “emergency”; according to the dictionary, the word primarily demands “an unforeseen combination of circumstances or the resulting state that calls for *immediate* action.” Merriam Webster’s Dictionary 407 (11th ed. 2009) (emphasis added). An emergency, by definition, is not an anticipated event occurring, perhaps, years in the future; it describes an imminent, unavoidable threat.

The surrounding context emphasizes the exigency of the circumstances described by section 202(c)’s reference to an “emergency”: the authority granted by section 202(c) is, primarily, a war-time power. 16 U.S.C. § 824a(c) (authorizing orders during “continuance of any war in which the United States is engaged”). See *Jarecki v. G.D. Searle & Co.*, 367 U.S. 303, 307 (1961) (noting that statutory terms should be interpreted in context of nearby parallel terms “in order to avoid the giving of unintended breadth to the Acts of Congress”). An “emergency” under the statute is limited to circumstances that are similarly urgent: “a *sudden* increase in the demand for electric energy,” for example. 16 U.S.C. § 824a(c) (emphasis added). See *Richmond Power and Light v. Federal Energy Reg’y Comm.*, 574 F.2d 610, 615 (D.C. Cir. 1978) (holding that section 202(c) “speaks of ‘temporary’ emergencies, epitomized by wartime disturbances” and that statute is reasonably understood to exclude circumstances such as “dependence on imported oil”).

Section 202(c) is, moreover, expressly meant to address short-term, “temporary” conditions—it provides no authority to implement long-term policy preferences, in response to potential difficulties that may emerge years from now. *Id.* Congress underlined the limited scope of section 202(c) when enacting the provision. “This is

a temporary power designed to avoid a repetition of the conditions during the last war, when a serious power shortage arose. Drought and other natural emergencies have created similar crises in certain sections of the country; such conditions should find a federal agency ready to do all that can be done in order to prevent a breakdown in electric supply.” S. Rep. No. 74-621 at 49 (1935).⁷

The Department’s regulations confirm those limitations. They define an “emergency” as “an *unexpected* inadequate supply of electric energy” resulting from “the unexpected outage or breakdown of facilities,” which may result from “weather conditions, acts of God, or unforeseen occurrences not reasonably within the power of the affected ‘entity’ to prevent.” 10 C.F.R. § 205.370 (emphases added). Anticipated customer demand can be an emergency, only upon “a *sudden* increase” in such demand emphasis). Those examples reflect the limited nature of the emergencies encompassed by section 202(c): unusual, unforeseen, and unexpected events, with immediate and substantial consequences.

2. *The Structure of the Act Further Confirms That the Authority Conferred by Section 202(b) Is Limited to Unusual, Unexpected Circumstances.*

Other portions of the statute, outside section 202(c) itself, reinforce that section’s tightly limited scope. Section 202(b) confirms the constrained nature of the Department’s emergency powers under section 202(c). That section provides cabined authority (exercised by the Federal Energy Regulatory Commission, rather than the Department) to “direct a public utility ... to establish physical connection[,], ... sell energy, or exchange energy” with other persons, under normal, non-emergency conditions. 16 U.S.C. § 824a(b). The statute establishes specific standards and procedural requirements for such non-emergency orders. *Id.* Section 202(c) removes many of those requirements—but does so only during war-time or similarly extreme circumstances. 16 U.S.C. § 824a(c). *See Otter Tail Power Co. v. Fed. Power Comm.*, 429 F.2d 232, 233-34 (1970) (holding that section 202(c) “enables the Commission to react to a war or national disaster,” while section 202(b) “applies to a crisis which is likely to develop in the foreseeable future”). That structure establishes a clear divide between quotidian energy-system management (even where necessary to avert a future crisis), governed by section 202(b), and unusual, unforeseeable ‘emergencies,’ governed by section 202(c). Read within that structure, section 202(c) cannot apply to routine planning matters; such application would render section 202(b) unnecessary, and eviscerate its procedural and substantive requirements.

⁷ While Congress amended section 202(c) in 2015, it did not alter the Department’s basic grant of emergency authority; it only addressed occasions on which a Department order might produce a conflict with other laws. *See* H.R. Rep. No. 114-357 (2015).

Section 215 of the Federal Power Act, added in 2005, suggests additional boundaries on the Department's powers under section 202(c). Section 215 provides a detailed enforcement mechanism, with specified procedures, remedies, and timeframes, for federal reliability standards. *See generally* 16 U.S.C. § 825o. As the D.C. Circuit has recognized, the portion of the Federal Power Act that predates that section—which includes section 202(c)—did not provide the federal government with the power to enforce requirements designed to ensure broad, long-term reliability requirements. *Alcoa, Inc. v. FERC*, 564 F.3d 1342, 1344 (D.C. Cir. 2009) (noting that prior to the Energy Policy Act of 2005, “the reliability of the nation’s bulk-power system depended on participants’ voluntary compliance with industry standards”). Consequently, a bare violation of a federal reliability standard cannot suffice to provide the Department with “emergency” power to enforce that standard under section 202(c). Reading section 202(c) to permit direct enforcement of reliability requirements through emergency orders would bypass the limits and procedures that Congress enacted in section 215 to constrain such enforcement. *See California Independent System Operator Corp. v. FERC*, 372 F.3d 395, 401-2 (D.C. Cir. 2004) (“Congress’s specific and limited enumeration of [agency] power over [particular matter] in [one section of Federal Power Act] is strong evidence that [separate section] confers no such authority on [agency].”). Similarly, the Federal Power Act contains separate and independent provisions to address wholesale rates, and any perceived insufficiency of such compensation. 16 U.S.C. § 824d & 824e. Those provisions likewise indicate that any perceived inadequacy in the wholesale markets cannot be an emergency sufficient to provide the Department with authority under section 202(c).

3. *The Application Does Not Contain Information Sufficient to Support Any Finding that an Emergency Exists under Section 202(c).*
 - a. The Long-Term Resource-Allocation Concerns Described by FirstEnergy Are Not an “Emergency”.

FirstEnergy’s request describes no imminent, specific threat that could plausibly qualify as an “emergency” under the statute. The request asserts a need for “fuel diversity,” and other parties’ failure to pay FirstEnergy (and other merchant coal and nuclear generators) the “compensation” to which FirstEnergy believes itself to be entitled. Request 3. It cites no imminent shortfall in supply; it states only that certain units have dispatched in the past, and suggests that such units may be replaced by other sources of supply over the next seven years. *Id.* at 8-9. The Department has never exercised section 202(c) under similar circumstances; in every case, it has carefully established an imminent, unavoidable, and specific

short-fall in electricity supply, and issued narrowly tailored orders intended to address that specific shortfall.⁸

Even if those suggestions were adequately supported (and they are not, see Part III, below), they would not suffice to demonstrate an emergency under section 202(c). The Department has made clear that its authority, under section 202(c), may only be exercised to address “a *specific* inadequate power supply situation.” 10 C.F.R. § 205.371 (emphasis added). FirstEnergy’s application alleges no such specific situation; indeed, it acknowledges as much, in its failure to meaningfully address the application requirements specified in the Department’s regulations. Request 30-31. As the D.C. Circuit has noted, such “long-term” policy concerns, associated with “broad questions of resource allocation,” are not the proper subject of an emergency order under section 202(c). *Richmond Power & Light*, 574 F.3d at 615-16 (citation omitted).

b. The Entity Authorized to Address FirstEnergy’s Concerns Has Already Established That There Is No Need for Emergency, Near-Term Action.

The Federal Power Act (and other statutes) give the Federal Energy Regulatory Commission (and the National Electric Reliability Council) primary authority over the questions that FirstEnergy asks this Department to resolve by emergency order. *E.g.*, Request 7-8 & 27 (asserting that “wholesale pricing” is not providing “full[] compensa[tion]” to FirstEnergy and threat to long-term “reliability”), and 16 (claiming non-specific “reliability” concerns). See 16 U.S.C. §§ 824d & 824o. As noted above, that the Federal Power Act includes separate, closely cabined provisions addressing such matters strongly suggests that FirstEnergy’s stated concerns are not appropriately addressed through section 202(c). Rather, they are matters for FERC, and for NERC.

And FERC has already squarely addressed, and rejected, the primary rationale provided by FirstEnergy for an order. As FirstEnergy acknowledges, FERC very recently rejected a proposal by the Department to require certain grid operators, including PJM, to provide cost-based compensation to merchant coal and nuclear generators. See FERC, Grid Reliability and Resilience Pricing, Order Terminating Rulemaking Proceeding, Initiating New Proceeding, and Establishing Additional Procedures, 162 FERC ¶ 61,012 (Jan. 8, 2018). FERC found that existing tariffs

⁸ FirstEnergy cites the Department’s recent orders regarding the Yorktown power plant. Request 19. But as the Department made clear in response to Sierra Club’s requests for rehearing, those Orders were only issued after the Department found that the orders were the sole means of avoiding “immediate interrupt[ions of] service” to a substantial portion of Virginia, and were narrowly tailored to avoid those defined, established interruptions. Summary of Findings for Department of Energy Order No 202-17-4 at 6-7.

were not unjust and unreasonable, based on the evidence that no “past or planned generator retirements . . . [are] a threat to grid resilience. *Id.* at 15. FirstEnergy presents essentially the same evidence of a threat to resiliency that the Commission rejected just a few months ago. FirstEnergy did not even seek rehearing of the Commission’s January 8 order, but instead seeks to relitigate the issue in a forum it views as more favorable. The Department should not accept FirstEnergy’s invitation to reconsider an issue decided not even three months ago by a unanimous FERC.

Although FERC decided there was no urgent threat to the grid’s reliability to justify the extraordinary action proposed by the Department, it did initiate a docket to promptly and more comprehensively address whether additional steps are needed to ensure resilience. Jan. 8 Order at 17-20. While FirstEnergy asserts that FERC’s ongoing docket to examine the problem that FirstEnergy complains of is “too little, too late,” Request at 10, FERC’s ongoing proceeding is precisely the forum to address the kinds of longer-term issues that FirstEnergy alleges, such as a substantial portion of the generation fleet retiring over a number of years. Likewise, the energy and capacity market reforms that PJM is currently considering, and will shortly present to FERC, are the proper forum to address any shortcomings in market design.

4. *The Relief Requested by the Application Is Not “Just and Reasonable” Compensation Within the Meaning of Section 202(c).*

FirstEnergy asks the Department to require that it and other merchant coal and gas generators receive compensation for “operating expenses, costs of capital and debt, and a fair return on equity and investment,” and specifically prescribe “full cost recovery consistent with ratemaking standards and principles or (b) full recovery of all costs necessary to ensure continued operations.” Request 31-32. FirstEnergy asks that contracts setting out this cost recovery be negotiated within 15 days, a virtual impossibility given the enormous number of units for which FirstEnergy seeks compensation and the likelihood that none of these units, which have operated in competitive markets for years, are prepared to present cost-of-service data to PJM. Moreover, FirstEnergy asks the Department, “if PJM and the owners are unable to agree to the contractual terms” within 15 days, to itself “determine just and reasonable rates.” *Id.*

As an initial matter, the Department’s regulations specify that, should the affected parties be unable to reach an agreement as to rates, the Department “shall . . . refer the rate issues to the Federal Energy Regulatory Commission.” 10 C.F.R. § 205.376. The Department cannot, therefore, grant FirstEnergy’s request that it directly set “just and reasonable rates,” Request at 32. The determination of just and reasonable wholesale rates is a matter indisputably within FERC’s jurisdiction, not that of the Department.

More importantly, the Federal Power Act allows the Department only to implement “just and reasonable” terms. 16 U.S.C. § 824a(c)(1). And the “full recovery” of costs and a fair return on equity that FirstEnergy requests is (Request 31)—as FERC itself has suggested—not demonstrably just or reasonable. In its January 8, 2018 order in RM18-1-000, the Commission held that the proposed remedy to “allow all eligible resources to receive a cost-of-service rate regardless of need or cost to the system” had not been shown to be just and reasonable nor to avoid undue discrimination. *Id.* at 16. FirstEnergy’s proposed compensation here suffers from many of the same flaws in the proposal that FERC rejected, including but not limited to, the lack of any explanation of whether such compensation should be net of market revenues, lack of assurance that a unit is actually needed to serve load, and lack of cost controls imposed by the scrutiny of proper cost-based ratemaking.

III. PJM is reliable and will remain so for the foreseeable future.

As with the Proposed Grid Resiliency Rule, FirstEnergy’s request relies on unfounded claims that planned retirements of existing generating units threaten the “resiliency” of the PJM system. As Sierra Club and other Public Interest Organizations explained in their initial and reply comments on the Proposed Rule, and as FERC found in rejecting the Proposed Rule, there is no evidence that such generating unit retirements threaten the reliability or resiliency of the system.⁹ Instead, as PJM recently explained in response to questions from the U.S. Senate

PJM does not believe that operating outside of the market to preserve a particular class or type of generation is needed at this time for reliability. The markets have been resilient in attracting new investment. In addition, a variety of tools exist as a backstop should specific generation be needed in a particular area.¹⁰

Nothing in FirstEnergy’s request supports a different conclusion here.

Given that FirstEnergy’s thin support for its request closely resembles that presented to initiate FERC’s consideration of the Grid Resiliency Pricing Rule, Sierra Club refers the Department to the extensive record created in that case, in particular, the comments of Public Interest Organizations, cited above, and those of PJM Interconnection, which provide a detailed rebuttal of the arguments presented

⁹ January 8, 2018 FERC Order in Docket Nos. RM18-1-100 and AD18-7-000.

¹⁰ U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 1 from Sen. Lisa Murkowski (Jan. 23, 2018).

by FirstEnergy in its Request.¹¹ We write here to briefly address two of the more egregious arguments posited in FirstEnergy's request—FirstEnergy's claims that the 2014 Polar Vortex and the recent Bomb Cyclone somehow demonstrate the resiliency value of the aging coal and nuclear units in PJM.

1. The Polar Vortex does not justify FirstEnergy's request for DOE to prop up uneconomic coal and nuclear units in PJM.

FirstEnergy's continued misrepresentation of the events of the 2014 Polar Vortex is especially galling. Request 5, 9, 17. Indeed, while FirstEnergy claims that the Polar Vortex established the necessity of its coal and nuclear units, the Polar Vortex actually showed that on-site fuel storage does not ensure enhanced resiliency.

Of the 35,000 MW of generation capacity that failed to respond, nationwide, during the Polar Vortex, 26 percent was coal and 5 percent was nuclear. DOE Staff Report at 98. And while a significant amount of natural gas capacity also experienced outages, the majority of those outages related to frozen equipment, *not* fuel supply issues.¹² Within PJM, only a quarter of the record high 22% forced outage rate on January 7, 2014, was the result of fuel supply issues.¹³ Far more significant were other causes such as faulty plant maintenance and weather-related damage.¹⁴ PJM's subsequent analysis of the Polar Vortex also highlighted that two resources not reliant on fuel—wind energy and demand—overperformed during that time period.¹⁵

¹¹ Initial Comments of PJM Interconnection, L.L.C. on the United States Department of Energy Proposed Rule.

¹⁴ *Id.*

¹⁵ *Id.* at 19-21 (May 8, 2014). FirstEnergy repeatedly states that 9300 MW of gas generation was unavailable during the Polar Vortex. Request 5, 17. This claim is based on the isolated fact during one hour of the Polar Vortex, 9,300 MW of generation was unavailable due to interruptions in the natural gas supply. PJM Jan. 2014 Cold Weather Events at 26. FirstEnergy fails to mention, however, that the amount of coal that experienced outages at that same time was 13,700 MW. *Id.*

FirstEnergy ignores the fact that, although fossil-fueled generators failed to perform at a significant rate during the Polar Vortex, PJM successfully managed the threat without having to resort to blackouts, and “even on the day with the tightest power supplies – January 7 – *several steps remained before electricity interruptions might have been necessary.*”¹⁶ This is in large part because PJM, like each RTO, provides for a planning reserve margin precisely to ensure reliability in the event that many supply resources are impacted at the same time, as occurred during the Polar Vortex.

And FirstEnergy also fails to acknowledge the significance of the reforms carried out after the Polar Vortex, which aimed to address the high generator outage rates during the event. In response to the Polar Vortex, FERC held a technical conference focused on the impacts of the Polar Vortex and actions to respond.¹⁷ In November 2014, FERC issued an order to initiate a review of how each RTO was addressing “fuel assurances,” a “broad concept” intending to encompass “a range of generator-specific and system-wide issues, including the overall ability of an RTO’s/ISO’s portfolio of resources to access sufficient fuel to meet system needs and maintain reliability.”¹⁸ Each affected RTO responded to this directive, and ultimately adopted a series of reforms intended to address winter performance concerns. For example, PJM implemented a series of common-sense nonmarket reforms to improve generators’ preparedness for winter conditions.¹⁹ In the very next winter, despite even higher peak winter loads, PJM saw much lower forced outage rates than during the Polar Vortex, and improved performance among generators that had participated in pre-winter operational testing—one of the reforms PJM put in place following the Polar Vortex.²⁰ In addition, both PJM and ISO-NE modified their capacity market rules so as to ensure supplier performance during scarcity conditions.²¹

²⁰ See PJM Interconnection, 2015 Winter Report (May 13, 2015), at <http://www.pjm.com/-/media/library/reports-notice/weather-related/20150513-2015-winter-report.ashx?la=en>, at 5-6.

²¹ See Order on Proposed Tariff Revisions, 151 FERC ¶ 61,218 (2015); Order on Tariff Filing and Instituting Section 206 Proceeding, 147 FERC ¶ 61,172 (2014).

While FirstEnergy suggests that the Capacity Performance program somehow “failed” because it did not spur the development of new gas supply contracts,

Finally, FirstEnergy's Request would support a fleet of merchant coal units that, in fact, *performed quite poorly* during the Polar Vortex.²² Analysis by Synergy Energy Economics of hourly generation data reveals that, after initially ramping up to meet growing demand, the coal fleet's performance began to decline even before the peak hour on January 6, 2014.²³ By PJM's winter peak on the evening of the 7th, coal output had fallen by more than 2,500 MW relative to its peak from the prior day.²⁴ Even among units that remained online, most coal units provided less output at the season peak than they had the previous day.

2. The recent Bomb Cyclone weather event and resulting NETL Report do not justify FirstEnergy's request for DOE to prop up uneconomic coal and nuclear units in PJM.

In an apparent effort to distinguish its request from the rejected Proposed Rule, FirstEnergy relies heavily on a recently released National Energy Technology Laboratory report ("NETL Report") that purports to find that coal-fired generating units were critical to preserving "resiliency" in PJM and other RTOs/ISOs during the "Bomb Cyclone" winter event in late December to early January.²⁵ The NETL Report's claim about the resiliency of existing coal units in PJM is based on the fact that during the Bomb Cyclone, coal generation increased more in comparison to the level of generation from December 1 through 26, 2017 than did other forms of generation. FirstEnergy extrapolates from the report that the impacts of the Bomb Cyclone show that "immediate action" to prop up uneconomic coal and nuclear units is "critical."²⁶

FirstEnergy's reliance on the NETL Report is unavailing because that report does not actually measure resilience in PJM. Instead, as Michael Goggin at Grid

Request 11, the company does not address whether that program has, in fact, increased reliability and resiliency of the grid by incentivizing many coal and gas units to weatherize and improve their preparedness for winter events.

²² Public Interest Organization Initial Comments, RM18-1-000, Appendix E, at E-15.

²³ *Id.*

²⁴ *Id.*

²⁵ FirstEnergy Request at 3-8, citing National Energy Technology Laboratory, Reliability, Resilience, and the Coming Wave of Retiring Baseload Units Volume I: The Critical Role of Thermal Units During Extreme Weather Events (Mar. 13, 2018) ("NETL Report"), available at <https://www.netl.doe.gov/research/energy-analysis/search-publications/vuedetails?id=2594>

²⁶ FirstEnergy Request at 3.

Strategies LLC has explained,²⁷ “the report employs a flawed metric of resilience that does not indicate the performance of different types of generators, but instead simply finds which energy sources are the most expensive.” In particular, coal generation was able to increase significantly during the Bomb Cyclone only because those coal units were too costly to operate earlier in December and, therefore, were either idle or only partially utilized. The fact that those idle or partially utilized coal plants increased their generation during the Bomb Cyclone shows only that those coal generators are uncompetitive unless electricity and gas prices increase significantly. Nothing in the NETL Report shows that such increased generation, or the substantially increased costs that it would entail, are necessary to ensure the resiliency or reliability of the PJM system. All bulk electric systems will have some generation that is more expensive and is therefore used primarily during peak load conditions. In PJM’s current generation portfolio many merchant coal plants function (inefficiently) as peaking units, but when those units retire others will take their place as PJM always procures enough generation capacity to meet its reserve margin requirement. In fact, PJM is currently oversupplied and has substantially more generating capacity than it needs.

The NETL Report is unhelpful to FirstEnergy’s effort to take advantage of the Bomb Cyclone because the report fundamentally misses the point. As Michael Goggin explains:

A true examination of resilience would assess actual performance in keeping the lights on for customers. Such an effort should focus on the transmission and distribution system failures that cause the vast majority of customer outages. Such an analysis would also include a range of threats to the power system.

Neither the NETL Report or FirstEnergy’s request provide such an analysis. Instead, they rely on a simplistic assessment that shows that many coal units in PJM are expensive, but fails to support FirstEnergy’s claim that they are critically needed.

In an effort to bolster its case, FirstEnergy seizes on a statement in the NETL Report that demand in PJM “could not have been met without coal” to claim that propping up coal units that are planning to retire by 2025 is necessary.²⁸ But that claim in the NETL Report, which focuses on capacity rather than generation, is meaningless because it relies on the unrealistic assumption that no other capacity

²⁷ Michael Goggin, Fossil Lab Misses Mark in Cold Weather “Resilience” Report, (Mar. 28, 2018), available at <http://sustainableferc.org/fossil-lab-misses-mark-in-cold-weather-resilience-report/>.

²⁸ FirstEnergy Request at 4, citing NETL Report at 17.

would replace the retiring coal.²⁹ In reality, substantial amounts of new generation has come online as coal units have retired over the past eight years, as PJM recently detailed:

On the resource side, it should be noted that although PJM saw about 22,000 MW of coal units retire since 2010, the capacity market attracted more than 37,000 MW of new generation since 2007, of which more than 21,000 MW of new generation was placed in service between 2010 and 2017. This has resulted in a current PJM reserve margin of 29.1 percent, which is well above the targeted reserve margin of 16.6 percent for 2017 and 16.1 percent for 2018.³⁰

There is no reason to believe that future coal and nuclear unit retirements that may occur by 2025 would not similarly be met with new resources, including renewables, demand response, and energy storage.

Echoing the NETL Report, FirstEnergy proclaims serious concerns about the fact that many of the coal units that dispatched during the Bomb Cyclone are expected to retire in the coming years.³¹ In support, FirstEnergy notes that PJM's President has recently testified that 1,410 MWs of nuclear generation and 3,688 MWs of coal generation that operated during the Bomb Cyclone is scheduled to retire in the next five years.³² The Company neglects to mention, however, that PJM went on to explain that those retiring coal units had a significantly higher forced outage rate (ranging from 16% to 31.7%) during the Bomb Cyclone than the 8% to 11.7% forced outage rate for the non-retiring coal units during that same time.³³ In other words, on the metric that FirstEnergy claims to be concerned

²⁹ NETL Report at 17 (noting that "any retiring units that were dispatched during the event would have to be replaced.").

Mike Lee (Jan. 23, 2018).

³³ U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Mike Lee (Jan. 23, 2018).

about—performance during extreme weather events—the coal units that the company wants to force customers to prop up fail.³⁴

Ultimately, FirstEnergy's attempt to use the Bomb Cyclone as an excuse to bail out its coal and nuclear plants fails because the PJM systems performance during that weather event shows that there is no looming resiliency crisis. In fact, PJM itself found that:

During the recent cold snap, PJM did not call a performance assessment interval, a 72-hour maintenance recall or any transient shortage intervals. However, the system was well tested and, as detailed in this report, there were indicators of improved performance of generating resources since 2014. Overall, the grid and the generation fleet performed well. Even during peak demand, PJM had excess reserves and capacity.³⁵

The available evidence plainly shows that in a time of major changes to the energy mix in our country, PJM is ensuring system reliability and the resilience to keep the lights on even during significant weather events such as the Bomb Cyclone. No basis has been provided for disrupting that system with substantial sums of out-of-market payments that would help prop up some of the oldest and least reliable coal units in the system while filling the coffers of the merchant generating companies that own those units.

³⁴ PJM also noted that it “does not see any challenge to reliability or fuel diversity from the announced retirements.” U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Mike Lee (Jan. 23, 2018).

³⁵ PJM INTERCONNECTION, PJM COLD SNAP PERFORMANCE DEC. 28, 2017 TO JAN. 7, 2018 (Feb. 26, 2018), available at <http://www.pjm.com/-/media/library/reports-notices/weather-related/20180226-january-2018-cold-weather-event-report.ashx>. PJM has also noted that it had 5,400 MWs of emergency demand response available during the Bomb Cyclone that it did not end up needing to utilize. U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Lisa Murkowski (Jan. 23, 2018).

IV. CONCLUSION

For the foregoing reasons, Sierra Club asks the Department of Energy to promptly deny the request of FirstEnergy Solutions.

Sincerely,

/s/ Casey Roberts

Document 12

From: Kelli O'Neill (b) (6)
Sent: Saturday, March 31, 2018 1:01 AM
To: Secretary Perry
Subject: RE: NO Bailout for Ohio Nuke Plants

Dear Secretary of Energy Perry,

While you may share the same name as the nuclear power plant that has operated for over 50 years, from which I (b) (6), along the shores of one of the world's major freshwater sources, Lake Erie, I certainly hope you do not share the same views as the Perry Nuclear Plant's owners/operators, First Energy Solutions! (NOTE: For all intents and purposes, any reference here to PNPP can also be said of the Davis-Besse Nuclear Power Plant on the western end of Ohio as well for this discussion.)

I am one of the luckiest people ever, in that for (b) (6) along the southern shores of one of our Great Lakes, Lake Erie, in a wee township called Madison-On-The-Lake, once known as the Onion capital of our country, now the Nursery capital, due to its fertile sandy loam soil. Vacationers from several hours away and as close as Cleveland, Youngstown and Pittsburgh, renting or owning a summer cottage on the lake shore, flock to its beaches every Summer and inject plenty of disposable income into the local economy here; it's basically a Summer Tourist Town.

One huge dark shadow falls upon the area - and we're reminded of it at 11:00 AM the first Wednesday of every month when the Perry Nuclear Power Plant Emergency Evacuation Sirens are tested. (b) (6)

Thirty-some years ago, (b) (6) I knew the Perry Nuclear Power Plant was not a benefit to this area and its people, which is why I voiced my concerns about the plant's being granted its full power license. The electricity generated by PNPP goes to the grid, not directly to us, yet we are forced to live with all the inherent risks, such as radioactive waste, just to name one. For instance, the first study conducted by then CEI, later to become Centerior, then FirstEnergy, the operating utility company and part owner of the PNPP, was Not a seismological study to determine earthquake faults. With Fukushima still burning and polluting the Pacific Ocean, one now knows how crucial this study would have been at the time, BEFORE the first shovelful of soil was removed to break ground. No, the local utility instead conducted a socio-economic study to determine the prime location of a reticent population, and they found it right here in Lake County, Ohio.

My protests, and those of 83% of the homeowners here in Madison, fell on deaf ears, and the PNPP was granted its Full Power License by the NRC in November of 1987. Thirty years and several earthquakes later, after the plant owners fought so desperately for the PUCO to grant DeRegulation of the Electric Industry here in Ohio, against our very wishes and warnings that the utility company would not find a worthy competitor, here we are - FirstEnergy says they can no longer afford to own and operate the plant unless you, Sir, give them the funds to float them along. Honestly, FE has been playing this game for thirty years or more that I am aware of. What's the definition of insanity - oh, right - continue doing the very same behaviors and expecting a different outcome... well, that's exactly how CEI/Centerior/FES has conducted themselves to the PUCO, to the NRC, to us - the ratepayers - and now to You and our federal government. I am SO not surprised to hear them crying and pleading for a bailout. On one hand, while they were claiming the value of the plant was one particular lower score or number, so they needn't pay a lot of taxes, their other hand was digging into Ratepayers' pockets, claiming the plant's value to

be so incredibly high they had to charge additional fees to maintain and operate it. And Every Time, our PUCO granted them whatever rate hike they requested.

And now, when they themselves sought to have electric generation deregulated by the PUCO, when we said it wouldn't work, they are claiming they can no longer afford to manage and operate PNPP because there is no competition in Ohio, and due to the affordability and increased availability of alternative energy sources such as natural gas, wind and solar, and because manufacturing jobs have left the area, therefore the need for additional electricity never came to fruition, the reason for building PNPP in the first place, as I understand it. Huh. You don't say...

So FirstEnergy Solutions now wants out of the electric generation business altogether, and frankly, I don't blame them. FirstEnergy has consistently, for Over 30 years, made bad decisions all along, and all along, like a spoiled brat, has gotten their way, EVERY TIME. Nothing is their fault, it seems, if you listen to their PR people, and yet we are expected to continue to cover their mistakes by opening our wallets...Again. Not this time - not while we, the residents, the ratepayers, pay the highest or second highest utility rates in our country, and have to live literally downwind of such grave risks to our fertile soil, our fresh, clean air, and our beautiful, fresh water.

I am Imploring you to REFUSE FirstEnergy any bailout, Secretary Perry, that would keep the Perry Nuclear Power Plant in operation in any way, shape or form, and keep ANY owner of the PNPP from charging us ratepayers for their decades-long bad decisions. And strongly suggest to the NRC to not extend PNPP's operating license, no matter who the owner/operator is or is to become.

With Perry's closing, will our area lose jobs? Yes, it will. Am I pleased to hear that? No, I am not. Yet, anyone working at the PNPP knew when they took those jobs that the plant was only licensed initially through 2017. Perhaps the Department of Energy, under your guidance, can help subsidize training for current nuclear power plant workers to learn Solar or Wind technologies so as to become employable again soon. THAT I would consider a nice solution. Any investment in one's education and training is never a waste in my opinion.

Thank you for your very careful consideration in this extremely important matter, Secretary Perry, and I look forward to your written reply to my letter at your soonest convenience.

All the best,

Kelli O'Neill

Re: FirstEnergy Request for Emergency Order Pursuant to Federal Power Act Section 202(c)

Dear Secretary Perry:

The Advanced Energy Management Alliance (“AEMA”)¹ writes in support of the PJM Interconnection position regarding the FirstEnergy 202(c) petition. AEMA is a trade association under Section 501(c)(6) of the Federal tax code whose members include national distributed energy resource companies and advanced energy management service and technology providers, including demand response (“DR”) providers, as well as some of the nation’s largest demand response and distributed energy consumers.

AEMA’s mission is to advocate for policies that empower and compensate customers appropriately in a manner that contributes to a more efficient, cost-effective, resilient, reliable, and environmentally sustainable grid and we have continually

¹ For more information, see AEMA website: <http://aem-alliance.org>

supported the inclusion of these resources into wholesale markets to achieve electricity cost savings for consumers, contribute to system reliability, and ensure balanced price formation.

The resources AEMA represents are part of the diversity that is crucial to operating the grid in a reliable manner. We believe that any attempt to increase payments to only a sub-set of power plants will simply drive up costs on the entire grid—both for consumers and for innovative technologies such as demand response, distributed energy resources, and distributed energy storage, that increasingly provide flexible and resilient services to the system. The Federal Energy Regulatory Commission (“FERC”) has cited multiple studies finding that distributed energy resources contribute to reliability and to resilience by providing “greater reliability through consumer reliance upon distributed energy resources to provide resilience from bulk power and distribution service interruptions” and “power outage mitigation or critical power support during outages (resilience) and power quality improvement (enhanced reliability).”²

AEMA has engaged³ at FERC and in states throughout various resilience proceedings, making a strong case for inclusion of distributed resources for reliability and

² FERC citing *Responses in a High Distributed Energy Resources Future*, at 26-28 (Report 1, Nov. 2015), https://emp.lbl.gov/sites/all/files/lbnl-1003823_0.pdf (Berkeley Lab Report); DNV-GL, *A Review of Distributed Energy Resources: New York Independent System Operator*, at 18 (Sept. 2014) (DNV-GL Report), http://www.nyiso.com/public/webdocs/media_room/publications_presentations/Other_Reports/Other_Reports/A_Review_of_Distributed_Energy_Resources_September_2014; U.S. Department of Energy, *The Potential Benefits of Distributed Generation and Rate-related Issues that May Impede Their Expansion: A Study Pursuant to Section 1817 of the Energy Policy Act of 2005* (Feb. 2007), <https://www.ferc.gov/legal/fed-sta/exp-study.pdf>; IEA, *Repowering Markets: market design and regulation during the transition to low-carbon power systems*, at 33 (2016)

³ AEMA filed Comments (<http://aem-alliance.org/aema-files-comments-doe-nopr-ferc/>) and Reply Comments to the DOE NOPR (<http://aem-alliance.org/aema-files-reply-comments-doe-nopr/>) as well as comments in Puerto Rico regarding resilience (<http://aem-alliance.org/aema-makes-resilience-recommendations-puerto-rico-commission/>).

resilience as critical to maintaining a flexible, cost-effective, and reliable system. We agree with PJM that their system, because of the diversity of resources participating in their ISO, is not facing issues of reliability. AEMA remains convinced that the technologies and services that our consumers and innovators are providing in PJM are part of the reason for that reliability. Thus, we support the position of PJM in opposition to the FirstEnergy petition.

Please do not hesitate to contact me at 202-524-8832 or Katherine@aem-alliance.org should you have any questions regarding this letter. Thank you for the consideration.

Sincerely,

Katherine Hamilton

RE: Motion of PJM Industrial Customer Coalition to Intervene

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Attached is PJM Industrial Customer Coalition's ("PJMICC") Motion to Intervene in the proceeding concerning FirstEnergy Solutions Corp.'s ("FES") Request For Emergency Action Under Section 202(c) of the Federal Power Act. PJMICC is comprised of several of the nation's largest manufacturers, with significant electricity-consuming facilities in Pennsylvania, Ohio,

Indiana, West Virginia, and other states in the PJM Region. PJMICC member companies strongly oppose the FES Request for emergency action. If the Request is not denied outright, all interested parties should be given 60 days to file comments, as requested by the Electric Power Supply Association and other organizations on Friday, March 30, 2018.

Respectfully submitted,

McNEES WALLACE & NURICK LLC

By

Robert A. Weishaar, Jr.

Counsel to the PJM Industrial Customer Coalition

RAW/db

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant
To Federal Power Act Section 202(c) By
FirstEnergy Solutions Corp.**

)
)
)
)
)

DOE Docket No. _____

**MOTION OF PJM INDUSTRIAL CUSTOMER
COALITION TO INTERVENE**

The PJM Industrial Customer Coalition (“PJMICC”), by and through its counsel, hereby moves to intervene in the above-captioned proceeding and protests the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. (“FES”), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES issued a letter (“Request”) to the Honorable James Richard Perry, Secretary of Energy, requesting that the Secretary use emergency authority under Section 202(c) of the Federal Power Act to find that an emergency condition exists in the PJM Interconnection, L.L.C. (“PJM”) territory requiring immediate intervention. Specifically, FES requests that the Secretary (a) order “certain existing nuclear and coal-fired generators . . . to enter into contracts” with PJM to generate and transmit energy, capacity, and ancillary services to “maintain the stability of the electric grid” and (b) order PJM to “promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide” to energy markets and the public. FES served the Request on over 100 owners of generation, transmission, or distribution assets, state public utility commissions, and others.

II. MOTION TO INTERVENE

PJMICC is an ad hoc association of large consumers of electricity that have facilities located throughout the PJM region. PJMICC members include large manufacturers in the steel, cement, paper, chemical, pharmaceutical, consumer products, and other industries, and large institutional consumers including universities and hospitals. If the Request is granted, cost responsibility for payments made pursuant to the Emergency Order may be recovered from consumers throughout the PJM region, including PJMICC member companies. PJMICC strongly opposes the Request and reserves the right to supplement this preliminary pleading to explain, in detail, why the Request is unjustified and unlawful, and should not be granted.

PJMICC moves for intervention under Rule 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure.¹ Consistent with Rule 214(b)(2), PJMICC has a significant and direct interest in the outcome of this proceeding. Further, as an organization representing many of the largest electricity consumers in the PJM footprint, PJMICC's participation is in the public interest.

¹ Federal Power Act Section 202(c) and the Department indicate that the Federal Power Act and the Commission's Rules of Practice and Procedure should be used for procedural guidance in Emergency Order proceedings. Guidance published on the Department's website points to the Commission's Rules where DOE regulations at 10 C.F.R. § 205.370, et. seq., are silent. *See, e.g.,* DOE Answer to Procedural Questions Concerning Rehearing of DOE Order, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 30, 2005) at 2. Additionally, the Department has taken the position that the procedure for judicial review of emergency orders under Section 202(c) of the Federal Power Act must be secured through Section 313 of that Act, 16 U.S.C. § 8251. *See, e.g.,* Order No. 202-05-3, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 20, 2005) at 11-12. The plain language of Section 202(c)(5) of the Federal Power Act, enacted in 2016, reinforces this principle. Where, as here, a proceeding exists under Chapter 12 of the Federal Power Act, the Commission's Rules of Practice and Procedure apply. *See* 16 U.S. Code § 825g(b) (FPA § 308) ("All hearings, investigations, and proceedings under this chapter shall be governed by rules of practice and procedure to be adopted by the Commission.").

III. SERVICE OF DOCUMENTS

The following persons are designated by PJMICC to receive service and communications on its behalf with regard to this proceeding:

Robert A. Weishaar, Jr.
McNees Wallace & Nurick LLC
1200 G Street NW, Suite 800
Washington, DC 20005
Phone: (202) 898-5700
Fax: (717) 260-1765
Email: bweishaar@mcneeslaw.com

Susan E. Bruce
Kenneth R. Stark
Matthew L. Garber

P.O. Box 1166
Harrisburg, PA 17108-1166
Phone: (717) 237-5254
Fax: (717) 260-1666
Email: sbruce@mcneeslaw.com
kstark@mcneeslaw.com
mgarber@mcneeslaw.com

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. PJMICC opposes the relief sought by FES. Overwhelming evidence, not cited in the Request, demonstrates that no need exists for the requested relief and certainly no emergency exists that would justify application of Section 202(c) of the Federal Power Act. PJMICC is developing a comprehensive rebuttal to FES' Request, and will be submitting that rebuttal to the Department.

PJMICC respectfully urges the Department to give all interested parties sufficient time to present their responses to the FES Request before ruling on the Request.² To that end, PJMICC supports the request that was filed Friday, March 30, 2018, by the Electric Power Supply Association and other organizations requesting a 60-day comment period.

² Obviously, PJMICC would not oppose an outright rejection of the Request, without a notice and comment period.

V. CONCLUSION

For the reasons set forth above, PJMICC respectfully requests that the Department grant PJMICC's motion to intervene in this proceeding and, if the Department does not reject the FES Request outright, provide all interested parties with 60 days to file comments on the Request.

Respectfully submitted,

McNEES WALLACE & NURICK LLC

VIA COURIER

The Honorable James Richard Perry
Secretary of Energy United States
Department of Energy 1000
Independence Avenue, S.W.
Washington, DC 20585

**Re: Request for Emergency Order Pursuant to Federal Power Act Section 202(c) Of
First Energy Solutions/Intervention and Comments of PSEG Companies**

Dear Secretary Perry:

On March 29, 2018, FirstEnergy Solutions (along with its identified affiliates) ("FES") submitted an application ("Application") pursuant to Section 202(e) of the Federal Power Act ("FPA"), Section 301(b) of the Department of Energy ("DOE") Organization Act, seeking a finding by the Secretary of Energy ("Secretary") that an emergency condition exists in the footprint of the PJM Interconnection, L.L.C. ("PJM"). The Application contends that immediate intervention by the Secretary, in the form of a Section 202(c) emergency order is needed to support resiliency and the continued operation of fuel-secure resources.

The PSEG Companies¹ agree the Application identifies an issue that requires immediate attention within the PJM footprint. PJM is faced with the recently announced closure of more 4,048 megawatts of FES nuclear generation and is faced with the risk of losing other nuclear plants in the future. Not only does nuclear generation provide resiliency to the generation fleet but it also provides the largest source of carbon-free generation in the region. The loss of nuclear generation to the PJM footprint would severely undermine the achievement of environmental goals designed to reduce the emission of greenhouse gases. Further, in addition to their fuel-secure and zero-emission attributes, nuclear plants are already hardened against many potential

¹ The "PSEG Companies" consist of PSEG Power LLC, PSEG Energy Resources & Trade LLC and Public Service Electric and Gas Company. In addition to submitting comments, the PSEG Companies also move to intervene in this proceeding to the extent that a formal request for intervention is required. A formal request to intervene and a further description of the PSEG Companies and their interests in this proceeding is set forth in Attachment A hereto.

threats² and provide other national security benefits³. To date, the PSEG Companies do not believe that either PJM or FERC has given this issue the proper level of priority or attention. The PSEG Companies thus urge policy makers to take immediate steps to assure that the attributes of nuclear generation are properly valued in market rules so that nuclear generation retains its role in supporting a resilient and secure electric grid and continues to serve as an important economic driver in the communities they serve.

Finally, the PSEG Companies reserve their rights to supplement their response under 10 C.F.R. § 205.374, and provide any other information relevant to the action requested in the Application.

Respectfully submitted,

Attachment A: Description of the PSEG Companies and Request to Intervene

The PSEG Companies consist of PSEG Power LLC (PSEG Power), PSEG Energy Resources & Trade LLC (PSEG ER&T) and Public Services Electric and Gas Company (PSE&G) and are each wholly owned, direct and indirect subsidiaries of Public Service Enterprise Group Incorporated ("PSEG"). The principal and executive offices of PSEG are located at 80 Park Plaza, Newark, New Jersey 07102. PSEG is a public utility holding company engaged in, among other things, the generation of electric energy, and the transmission, distribution and sale of electricity and natural gas through its subsidiaries.

The PSEG Companies respectfully submit that they have vital interests in this proceeding and that their participation will serve the public interest. In addition, some or all of the PSEG Companies (or their subsidiaries) may qualify as "entities" that have been "designated as a potential source of emergency assistance or as a potential supplier of transmission services" within the meaning of 10 C.F.R. § 205.374 of the DOE's regulations.

PSEG Power is a wholesale energy supply company that integrates its generation asset operations with its wholesale energy, fuel supply, energy trading and marketing, and risk management functions through three principal subsidiaries: (i) PSEG Nuclear LLC ("PSEG Nuclear"), which owns and operates nuclear generating stations; (ii) PSEG Fossil LLC ("PSEG Fossil"), which develops, owns, and operates domestic fossil-fuel fired and other non-nuclear generating stations; and (iii) PSEG ER&T, which markets the capacity and production of PSEG Nuclear's and PSEG Fossil's generating stations. PSE&G is the largest electric and gas utility located in the state of New Jersey and is a PJM transmission owner.

PSEG Power's subsidiary, PSEG Nuclear, is the operator of two nuclear generating plants – Salem and Hope Creek -- located in Salem County, New Jersey. Exelon Corporation is a co-owner with PSEG Nuclear of the Salem units. In addition, PSEG is the non-operator co-owner, also with Exelon Corporation, of an interest in the Peach Bottom nuclear plant located in southeastern Pennsylvania. In total, PSEG Nuclear owns approximated 3,630 MWs of nuclear generation capability. All three of the nuclear plants are identified in Attachment A to the Application. PSEG ER&T and PSE&G also have significant interests at stake. PSEG ER&T's activities in the PJM market and as a supplier of load in the PJM region could be affected by the outcome of this proceeding. PSE&G's operations and the customers located in its service territory could also be affected.

Re: Dying Coal- and Nuclear-Powered Utility Asks Again for Government Bailout

Dear Secretary:

FirstEnergy, a utility struggling to stay alive in the dying coal and nuclear industries, is once again looking for a bailout from government regulators.

Ohio-based FirstEnergy has asked the Department of Energy to take emergency action to keep its coal-fired and nuclear power plants open. The plants can't compete with cheaper renewable energy and natural gas on the open market. This comes on the heels of the company announcing that it will close three nuclear plants by 2022.

In a letter to you, FirstEnergy claimed that closing its power plants would jeopardize reliability of the electric grid. Sound familiar?

In November, FirstEnergy and other companies lobbied the Trump administration to bail out their industries by requiring regional grids to buy a percentage of power from coal and nuclear plants, even when less expensive sources are available. The scheme was shot down by the Federal Energy Regulatory Commission.

The bailout was the brainchild of Robert Murray, CEO of a Murray Energy, a major supplier of coal to FirstEnergy. Robert Murray was a major donor to President Trump's campaign, and his wish list set the agenda for many of the administration's rollbacks of environmental regulations.

Under the Freedom of Information Act, EWG and American Oversight petitioned for release of all communications between you and coal and utility companies, including Murray Energy and FirstEnergy. They are still waiting on a response.

This has nothing to do with maintaining smooth operation of the electric system. It has everything to do with FirstEnergy's perilous finances. On Monday, FirstEnergy Solutions, the division of the company that sells power on the open market filed for bankruptcy. According to Greentech Media, FirstEnergy lost \$6.2 billion in 2016.

As before, regional grid operators were quick to dismiss FirstEnergy's claim that loss of their plants would threaten the reliability of the electric system. PJM, the operator that oversees the largest regional wholesale electricity market in the nation – including the states where FirstEnergy operates – explained:

This is not an issue of reliability. There is no immediate emergency. Diversity of the fuel supply is important, but the PJM system has adequate power supplies and healthy reserves in operation today, and resources are more diverse than they have ever been. Nothing we have seen to date indicates that an emergency would result from the generator retirements.

Asking for a bailout from taxpayers or ratepayers is old hat for FirstEnergy, which has also asked Ohio regulators for help. The company's bailout proposal in 2016 would have cost ratepayers \$4 billion, according to the Institute for Energy Economics and Financial Analysis. State regulators approved the scheme, but federal regulators said no, reasoning that it would have distorted wholesale market prices.

Many utilities are quick to deride subsidies for solar panels and wind farms, but have no qualms with seeking government subsidies to keep coal and nuclear on life support. In the competition for cheaper, cleaner electricity, coal and nuclear have already lost to solar and wind. FirstEnergy's deathbed plea is further proof that the era of coal and nuclear power dominance is over.

Thank you for the opportunity to bring these remarks to your attention.

Yours sincerely
Robert E. Rutkowski

RE: Motion of American Municipal Power Inc. to Intervene

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Attached is American Municipal Power, Inc.'s ("AMP") Motion to Intervene and Statement of Opposition in the proceeding concerning FirstEnergy Solutions Corp.'s ("FES") Request For Emergency Action Under Section 202(c) of the Federal Power Act. AMP is a nonprofit Ohio corporation that provides electric power and services to municipal members with electric utility systems across a nine state footprint, including: Ohio, West Virginia, Pennsylvania, Michigan, Virginia, Kentucky, Indiana, Maryland and Delaware. AMP strongly opposes the FES Request for emergency action. If the Request is not denied outright, all interested parties should be given 60

UNITED STATES OF AMERICA
BEFORE THE DEPARTMENT OF ENERGY

Request for Emergency Order Pursuant
To Federal Power Act Section 202(c) By
FirstEnergy Solutions Corp.

)
)
)
)
)

DOE Docket No. _____

MOTION OF AMERICAN MUNICIPAL POWER, INC. TO INTERVENE

American Municipal Power, Inc. ("AMP") by and through its counsel, hereby moves to intervene in the above-captioned proceeding and protests the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. ("FES"), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES sent a "Request for Emergency Order Pursuant to Federal Power Act Section 202(c) ("Request") to the Honorable James Richard Perry, Secretary of Energy, requesting that the Secretary use emergency authority under Section 202(c) of the Federal Power Act to find that an emergency condition exists in the PJM Interconnection, L.L.C. ("PJM") territory requiring immediate intervention and extraordinary relief. FES requested that the Secretary issue an order directing (1) "certain existing nuclear and coal-fired generators . . . to enter into contracts" with PJM to generate and transmit energy, capacity, and ancillary services to "maintain the stability of the electric grid" and (2) PJM to "promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide" to energy markets and the public. FES requested that the Secretary "immediately issue the emergency order described above." Request at 33.

II. MOTION TO INTERVENE

AMP is a nonprofit Ohio corporation organized in 1971 with members in nine states: Ohio, West Virginia, Pennsylvania, Michigan, Virginia, Kentucky, Indiana, Maryland and Delaware. The

members of AMP are political subdivisions of their respective domicile states that own and operate municipal electric utility systems, and the Delaware Municipal Electric Corporation, a political subdivision and joint action agency of the State of Delaware that itself has nine municipal members. AMP's primary purpose is to assist its member communities in meeting their electric and energy needs. This purpose is served in a number of ways, including ownership of electric generation, scheduling and dispatch of member-owned generation, power supply, transmission arrangements, and energy efficiency and demand response measures that AMP makes with third parties at the request of and on behalf of its members. AMP serves as a full or partial requirements supplier for most of its 135 members.

If FES's requested relief is granted, cost responsibility for payments made pursuant to the Emergency Order must ultimately be recovered from customers. Although FES did not address how much those costs will amount to, how such costs should be recovered or from whom, the amounts have been estimated to be staggering, increasing costs to consumers, including AMP members and their customers, by \$8.1 billion annually, which is a roughly 19% increase in total costs.¹ As such, and consistent with Rule 214(b)(2), AMP has a significant and direct interest in the outcome of this proceeding. Additionally, as an organization representing many load serving entities in the PJM region, AMP's participation is in the public interest. Accordingly, AMP moves for intervention under Rule 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure.² AMP strongly opposes the

¹ See, "The Department of Energy's Grid Resilience Pricing Proposal: A Cost Analysis" at 4, available at: http://energyinnovation.org/wp-content/uploads/2017/12/20171025_Resilience-NOPR-Cost-Research-Note-UPDATED.pdf.

² Federal Power Act Section 202(c) and the Department indicate that the Federal Power Act and the Commission's Rules of Practice and Procedure should be used for procedural guidance in Emergency Order proceedings. Guidance published on the Department's website points to the Commission's Rules where DOE regulations at 10 C.F.R. § 205.370, et. seq., are silent. See, e.g., DOE Answer to Procedural Questions Concerning Rehearing of DOE Order, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 30, 2005) at 2. Additionally, the Department has taken the position that the procedure for judicial review of emergency orders under Section 202(c) of the Federal Power Act must be secured through Section 313 of that Act, 16 U.S.C. § 825l. See, e.g., Order No. 202-05-3, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 20, 2005) at 11-12. The plain

Request and reserves the right to supplement this preliminary pleading to explain, in detail, why the Request is unjustified and unlawful, and should not be granted.

III. SERVICE OF DOCUMENTS

The following persons are designated by AMP to receive service and communications on its behalf with regard to this proceeding:

Lisa G. McAlister, Senior Vice President and General Counsel for Regulatory Affairs*
Kristin V. Rothery, Asst. Deputy General Counsel*
Chris Norton, Director of Market Regulatory Affairs*
AMERICAN MUNICIPAL POWER, INC.
1111 Schrock Road, Suite 100
Columbus, OH 43229

Fax: (614) 540-1080
E-mail: lmcalister@amppartners.org
krothery@amppartners.org
cnorton@amppartners.org
* Electronic service requested

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. AMP opposes the relief sought by FES. Overwhelming evidence, not cited in the Request, demonstrates that no need exists for the requested relief and certainly no emergency exists that would justify application of Section 202(c) of the Federal Power Act. In fact, FES itself states that there were “numerous signs for many years that the emergency was coming.” Request at 1. AMP respectfully requests that the Department reject the Request outright. In the alternative, AMP respectfully urges the Department to give all interested parties sufficient time to present their responses to the FES Request before ruling on the Request.³ To that end, AMP supports the request that was filed

language of Section 202(c)(5) of the Federal Power Act, enacted in 2016, reinforces this principle. Where, as here, a proceeding exists under Chapter 12 of the Federal Power Act, the Commission's Rules of Practice and Procedure apply. See 16 U.S. Code § 825g(b) (FPA § 308) (“All hearings, investigations, and proceedings under this chapter shall be governed by rules of practice and procedure to be adopted by the Commission.”)

³ AMP would not oppose an outright rejection of the Request, without a notice and comment period.

Friday, March 30, 2018, by the Electric Power Supply Association and other organizations requesting a 60-day comment period.

V. CONCLUSION

For the reasons set forth above, AMP respectfully requests that the Department grant AMP's motion to intervene in this proceeding and, if the Department does not reject the FES Request outright, provide all interested parties with 60 days to file comments on the Request.

Respectfully submitted,

RE: Motion of the Delaware Division of the Public Advocate to Intervene

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Attached is the Delaware Division of the Public Advocate's ("DPA") Motion to intervene in the proceeding concerning FirstEnergy Solutions Corp.'s ("FES") Request for Emergency Action under Section 202(c) of the Federal Power Act. The Delaware DPA is an agency of the State of Delaware statutorily charged to advocate for the lowest reasonable rates for consumers and small businesses

consistent with the maintenance of adequate utility service. Further, the Delaware DPA is empowered to appear on behalf of the interest of consumers in Delaware's state courts, the federal courts and federal administrative and regulatory agencies and commissions in matters involving rates, service and practices of public utilities.

The Delaware DPA strongly opposes the FES Request for emergency action. If the Request is not denied outright, all interested parties should be given 60 days to file comments, as requested by the Electric Power Supply Association and other organizations on Friday, March 30, 2018.

Respectfully submitted,

Delaware Division of the Public Advocate

By: Andrew C. Slater,
Public Advocate

II. MOTION TO INTERVENE

The Delaware Division of the Public Advocate (“Delaware DPA”) is an agency of the State of Delaware statutorily charged to advocate for the lowest reasonable rates for consumers and small businesses consistent with the maintenance of adequate utility service. Further, the Delaware DPA is empowered to appear on behalf of the interest of consumers in Delaware’s state courts, the federal courts and federal administrative and regulatory agencies and commissions in matters involving rates, service and practices of public utilities.

If FE’s requested relief is granted, cost responsibility for payments made pursuant to the Emergency Order will be recovered from consumers throughout the PJM region, including Delaware residents. The Delaware DPA strongly objects to the request and reserves the right to supplement this preliminary pleading to explain, in detail, because the request is onerous, unjustified and unlawful, and should not be granted. In addition, FE’s requested relief includes not only its assets but also impermissibly demands the same relief for the entire nuclear and coal generation fleet without any demonstration that such relief is warranted.

The Delaware DPA moves for intervention under Rule 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure. In conformity with Rule 214(b)(2), the Delaware DPA has a significant and direct interest in the outcome of this proceeding as every electricity customer in this State will be immediately and irreparably affected. The Delaware DPA’s participation in this proceeding is in the public interest.

III. SERVICE OF DOCUMENTS

The following persons are designated by the Delaware DPA to receive service and communications on its behalf with regard to this proceeding:

Andrew C. Slater
Delaware Public Advocate
29 S. State Street
Dover, DE 19901
Telephone: (302)241-2550
Email: Andrew.slater@state.de.us

Ruth Ann Price
Delaware Deputy Public Advocate
Carvel State Office Building
820 N. French Street, Suite 4
Wilmington, DE 19801
Telephone: (302) 241-2555
Email: ruth.price@state.de.us

Regina A. Iorii
Deputy Attorney General
Delaware Department of Justice
820 N. French Street, 6th Floor
Wilmington, DE 19801
Telephone: (302) 577-8159
Email: regina.iorii@state.de.us

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. The Delaware Division of the Public Advocate opposes the relief sought by FES. FES has not provided that it or other coal and nuclear resources cited in their request needs the requested relief. FES has not presented a credible scintilla of evidence to show that an emergency exists of any magnitude and definitely not one that justifies the application of Section 202(c) of the Federal Power Act. On January 8, 2018, the Federal Energy Regulatory Commission (“FERC”) initiated a proceeding, *Grid Resilience in Regional Transmission Organizations and Independent System Operators*, Docket No. AD18-7-000, to comprehensively and thoughtfully examine the issues of resilience presented in FES’s request. FES demand for emergency relief intends to circumvent FERC’s current deliberative proceeding in which all interested parties have an opportunity to be heard.

Delaware DPA respectfully urges the Department to give all interested parties sufficient time to present their responses to the FES request before ruling on the request. The Delaware DPA urges the Department to deny the request as no emergency has been shown. In the alternative, Delaware DPA encourages the Department to order a 60-day comment period.

V. CONCLUSION

For the reasons set forth above, DE DPA respectfully requests that the Department grant its motion to intervene in this proceeding. Further, the Delaware DPA requests the Department reject the FES request, or, in the alternative, provide all interested parties with 60 days to file comments.

Respectfully submitted,

/s/ Andrew C. Slater

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant
to Federal Power Act Section 202(c) of
FirstEnergy Solutions Corp.**)
)
)

DOE Docket No. _____

MOTION TO INTERVENE OF THE DELAWARE PUBLIC SERVICE COMMISSION

The Delaware Public Service Commission (“Delaware PSC”) hereby moves to intervene in the above-captioned proceeding and protests the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. (“FES”), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES issued a letter (“FES Request”) to the Honorable James Richard Perry, Secretary of the Department of Energy (“Department”), requesting that the Secretary use emergency authority under Section 202(c) of the Federal Power Act to find that an emergency condition exists in the PJM Interconnection, L.L.C. (“PJM”) territory requiring immediate intervention. FES requests two forms of relief: that the Secretary (a) order “certain existing nuclear and coal-fired generators . . . to enter into contracts” with PJM to generate and transmit energy, capacity, and ancillary services to “maintain the stability of the electric grid” and (b) order PJM to “promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide” to energy markets and the public. The FES

Request was served on over 100 owners of generation, transmission, or distribution assets, state public utility commissions, including the Delaware PSC, and others.

II. MOTION TO INTERVENE

The Delaware PSC is an agency of the State of Delaware responsible for ensuring safe, reliable, and reasonably priced utility services for Delaware consumers.¹ The Delaware PSC is a State Commission as defined in Section 1.101(k) of the Commission's Rules of General Applicability, 18 C.F.R. §1.101(k).

If FE's requested relief is granted, cost responsibility for payments made pursuant to the Emergency Order will be recovered from consumers throughout the PJM region, including Delaware residents. The Delaware PSC strongly objects to the FES Request and reserves the right to supplement this preliminary pleading to explain, in detail, why the FES Request is unsupported, unlawful, and should be rejected.

The Delaware PSC moves for intervention under Rule 214 of the Commission's Rules of Practice and Procedure.² In conformity with Rule 214(b)(2), the Delaware PSC has a significant and direct interest in the outcome of this proceeding as every electricity customer in this State will be immediately and severely affected. The Delaware PSC's participation in this proceeding is in the public interest.

¹ See 26 Del. C. §§ 202(a), 303(a).

² The Commission's Rules of Practice and Procedure should be used for procedural guidance in Emergency Order proceedings. See Motion of PJM Industrial Customer Coalition to Intervene, filed in this proceeding on April 2, 2018 at n. 1.

III. SERVICE OF DOCUMENTS

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. The Delaware PSC opposes the departure from competitive markets sought by FES. The FES Request failed to make the requisite showing of an emergency under the definition of Section 202(c) of the Federal Power Act and instead misinterpreted available data to support its “general dissatisfaction with the PJM markets or its competitive position therein.”³ In a similar proceeding, responding to nearly identical arguments,⁴ the Commission utilized its relevant industry expertise and determined that, “[w]hile some commenters allege grid resilience or reliability issues [exist] due to potential retirements of particular resources, we find that these

³ PJM letter to The Honorable James Richard Perry, filed in this proceeding on March 30, 2018, at n. 1.

⁴ See Comments of FES et al. in support of the Grid Reliability and Resilience Pricing Notice of Proposed Rulemaking. Commission Docket No. RM18-1. Oct. 23, 2017.

assertions do not demonstrate the unjustness or unreasonableness of the existing RTO/ISO tariffs. In addition, the extensive comments submitted by the RTOs/ISOs do not point to any past or planned generator retirements that may be a threat to grid resilience.”⁵ The Commission also established additional proceedings to ensure that all facets of grid reliability and resilience were thoroughly vetted in an orderly and transparent fashion.

Delaware PSC respectfully urges the Department to give all interested parties sufficient time to present their responses to the FES Request before issuing a determination. Accordingly, the Delaware PSC supports the request that was filed in this proceeding on March 30, 2018, by the Electric Power Supply Association and other organizations seeking a 60-day comment period.

V. CONCLUSION

For the reasons set forth above, the Delaware PSC respectfully requests that the Department grant its motion to intervene in this proceeding. Further, the Delaware PSC asks that the Department reject the FES Request, or, in the alternative, provide all interested parties with 60 days to file comments.

Re: Motion of New Jersey Division of Rate Counsel to Intervene

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Attached is New Jersey Division of Rate Counsel's ("NJRC") Motion to Intervene in the proceeding concerning FirstEnergy Solutions Corp.'s ("FES") Request For Emergency Action Under Section 202(c) of the Federal Power Act. NJRC is the administrative agency charged under New Jersey Law with the general protection of the interests of utility ratepayers. *N.J.S.A.*

52:27E-50 *et seq.* NJRC is also a member of PJM Interconnection L.L.C., which will be affected by this FES request. NJRC opposes this FES request for emergency action. If this request is not denied outright, there should be a 60 day comment period, as requested by the Electric Power Supply Association *et al* on March 30, 2018.

Respectfully submitted,

A handwritten signature in black ink that reads "Stefanie A. Brand". The signature is written in a cursive style with a horizontal line underneath the name.

Stefanie A. Brand, Esq.

Director, New Jersey Division of Rate Counsel

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.) DOE Docket No. _____**

MOTION OF NEW JERSEY DIVISION OF RATE COUNSEL TO INTERVENE

The New Jersey Division of Rate Counsel (“NJRC”), by and through its counsel, hereby moves to intervene in the above-captioned proceeding and protests the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. (“FES”), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES issued a request by letter (“Request”) to the Honorable Rick Perry, US Secretary of Energy, requesting that the Secretary use emergency authority under Federal Power Act Section 202(c) to find that an emergency condition exists in the PJM Interconnection L.L.C. (“PJM”) territory requiring immediate attention. In its Request, FES asks that the Secretary order “certain existing nuclear and coal-fired generators” to contract with PJM for energy, capacity and ancillary services to “maintain the stability of the electric grid.” FES also requests that the Secretary order PJM to “promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide.” The Request has been served on over 100 affected parties.

II. MOTION TO INTERVENE

NJ Rate Counsel is the administrative agency charged under New Jersey Law with the general protection of the interests of utility ratepayers. *N.J.S.A. 52:27E-50 et seq.* As the regulatory agency charged with protecting the utility ratepayers in the State of New Jersey, NJ Rate Counsel's participation is unique and in the public interest. Pursuant to C.F.R. §385.214(b)(2), NJ Rate Counsel is an "entity" within the meaning of Rule 214(b)(2) and NJRC accordingly moves for intervention.

If the FES Request is granted, cost responsibility for payments made pursuant to the Emergency Order may be recovered from consumers throughout the PJM region, including New Jersey. NJRC strongly opposes the Request and reserves the right to supplement this pleading to explain why it is unjust and unlawful.

NJ Rate Counsel will not be adequately represented by any other party to this proceeding, but may join with similarly situated entities. Good cause exists to grant this Motion to Intervene in this proceeding as NJ Rate Counsel represents NJ ratepayers directly affected by the FES request and is therefore a stakeholder in the outcome of the proceeding.

III. SERVICE OF DOCUMENTS

The following persons are designated by NJRC to receive service and communications on its behalf with regard to this proceeding:

Stefanie A. Brand, Esq.
Director, New Jersey Division of Rate Counsel
140 East Front Street
Trenton, NJ 08625
Phone: (609) 984-1460
Fax: (609) 292-2923
Email: sbrand@rpa.nj.gov

Brian Lipman, Litigation Manager
Henry M. Ogden, Esq.
Felicia Thomas-Friel, Esq.
140 East Front Street
P.O. Box 003
Trenton, NJ 08625-003
Phone: (609) 984-1460
Fax: (609) 292-2923
Email: blipman@rpa.nj.gov
hogden@rpa.nj.gov
ftomas@rpa.nj.gov

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. NJRC opposes the relief sought by FES. The available evidence, not cited in the Request, demonstrates that no need exists for the requested relief and certainly no emergency exists that would justify application of Section 202(c) of the Federal Power Act.

NJRC respectfully urges the Department to give all interested parties sufficient time to present their responses to the FES Request before ruling on the Request. Accordingly, NJRC supports the March 30, 2018 filing by the Electric Power Supply Association and other organizations requesting a 60-day comment period.

V. CONCLUSION

For all the foregoing reasons, NJRC respectfully requests that the Department grant NJRC's motion to intervene in this proceeding, and, if the Department does not reject the FES Request outright, provide all interested parties 60 days to file comments on the Request.

Respectfully submitted,

NEW JERSEY DIVISION OF RATE COUNSEL

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

On behalf of the Ohio Environmental Council (“OEC”) and its thousands of individual members throughout the state of Ohio, I write today to object to FirstEnergy Solutions Corp.’s request for an emergency order under Section 202(c) of the Federal Power Act. On March 29, 2018, FirstEnergy Solutions Corp. (“FES”) formally requested from the Department of Energy (“Department”) an emergency order asking that all merchant coal and nuclear generating units in the PJM Interconnection (“PJM”) footprint with at least 25 days of onsite fuel be provided nonmarket, cost-of-service rates and guaranteed profits for at least four years.¹ This request is just one in a number of attempts by FES, its parent First Energy Corp., and affiliate distribution companies (collectively “FirstEnergy”) to request drastic increases in consumer-funded subsidies for its otherwise unprofitable and unsustainable fossil fuel generation resources—and should be denied by the Department.

¹ Letter from FirstEnergy Solutions Corporation to the Honorable James Richard Perry (Mar. 29, 2018) (hereinafter “application”).

Interest and Standing

Throughout its 49-year history, OEC has been the state of Ohio's leading advocate for fresh air, clean water, and sustainable energy use in the state, and its members will be injured if this request is granted. Many of the OEC's members live and work in the shadows of, and experience the pollution from, the coal-fired and nuclear power plants FES is hoping to subsidize under this proposal. Even more of OEC's members will be forced to pay for this proposal's bailout of the FES fossil fuel fleet. If this order is approved, the OEC and its members throughout Ohio would be injured not only from the continuing environmental and human health degradation from these plants, but also the escalated costs reflected on their energy bills.

The OEC concurs with the arguments made by our national colleagues at Environmental Defense Fund ("EDF"), Natural Resources Defense Council ("NRDC"), Environmental Law and Policy Center ("ELPC") and Sierra Club, and others that the FES application would impose enormous cost upon American homeowners and businesses without benefit; and undermine the competitive marketplace.² To both support and supplement those comments in opposition, the OEC provides the following perspective and urges the Department of Energy to deny the FirstEnergy application requesting an emergency designation for its uneconomic power plants.

FirstEnergy's 202(c) application is the latest in a series of requests for a bailout.

The OEC has seen proposals such as this from FirstEnergy before, and disagrees with its suggestion that this request is an emergency of any sort. The Department is just the next venue in which First Energy Corp. family of companies are hoping secure additional revenue sources for its less-than-profitable generation resources. The OEC first opposed a version of FES's bailout proposal in 2014 when FirstEnergy proposed a power purchase agreement ("PPA") before the Public Utilities Commission of Ohio ("PUCO"). Under the proposed PPA, FES would transfer to the FirstEnergy Distribution Companies the right to sell all output, including energy, capacity, ancillaries, and environmental attributes from the FES share of the Ohio Valley Electric Corporation ("OVEC") which includes two sixty-year old, coal-fired power plants (Kyger Creek in Cheshire, Ohio and Clifty Creek in Madison, Indiana), the fifty-two year old Sammis coal-fired plant, and the Davis-Bessie nuclear plant. The PPA would have been secured or guaranteed by payments made by FirstEnergy customers under a new fee which they called the "Retail Rate Stabilization Rider" or Rider RRS.³

While the PUCO approved this PPA on March 31, 2016, this original approval was short lived, for on April 31, 2016, the Federal Energy Regulatory Commission ("FERC") issued an Order granting a complaint against FirstEnergy filed by a number of energy organizations and companies.⁴ Specifically, FERC granted the Complainant's request "that the Commission rescind the waiver of its affiliate power sales restrictions that it previously granted to FirstEnergy Corporation's market-regulated power sales

² See Joint Comments of EDF and NRDC submitted on March 30, 2018; See also Comments of the Sierra Club Submitted March 30, 2018

³ In *The Matter of the Application of Ohio Edison Company, The Cleveland Electric Illuminating Company and The Toledo Edison Company for Authority to Provide for a Standard Service Offer Pursuant to R.C. 4928.143 in the Form of and Electric Security Plan*, PUCO Case No 14-1297-EL-SSO.

⁴ *Order Granting Complaint*, 155 FERC ¶ 61,101, (April 27, 2016).

affiliates.”⁵ Shortly after FERC’s order, FirstEnergy came back to the PUCO, this time asking not for a PPA, but credit support to ensure the Companies are not downgraded from investment grade, and to circumvent the FERC’s decision.

PUCO approved FirstEnergy’s credit support rider which therein forced customers in FirstEnergy’s territory to collectively pay up to \$204 million more per year on their electric bills, for up to five years. Over \$132 million of this is direct payment through a rider on customers’ bills to bolster the Company’s credit rating, and the rest would go to cover the Company’s taxes. Fundamentally, the impetus for this case is the fact that FirstEnergy made a series of disfavorable business decisions, refused to innovate, and doubled down on aging fossil fuel resources at a time when other utilities were transitioning to cleaner, more efficient resources. Presently, the OEC and its partners have appealed the PUCO decision to approve the FirstEnergy credit support mechanism to the Supreme Court of Ohio.⁶

Contemporaneously with the PUCO proceedings, FirstEnergy approached the General Assembly to create a Zero Emission Nuclear (ZEN) program for the state of Ohio, patterned after similar programs in Illinois and New York. The ZEN mechanism, if approved, would allow FirstEnergy to collect approximately \$300 million each year for approximately 16 years, meaning a ratepayer impact of approximately \$4.8 billion over the term of the program anticipated that this program would result in a 5% increase for the average family, and a 5-9% percent increase for business customers. However, the legislation has garnered little to no political appetite to saddle customers with a \$4 billion nuclear rate hike, and has stalled in the Ohio legislature.

FES’s attempt to use Section 202(c) is unlawful

With FirstEnergy running into stumbling blocks with state decision makers, it has turned its eyes to the US Department of Energy and FERC in the present application, seeking compensation for “operating expenses, costs of capital and debt, and a fair return on equity and investment” on these uneconomic plants. To obtain this relief, FES is requesting an emergency order. Yet, FES’s application is asking the Department of Energy to disregard federal statute and case law to give it millions of dollars to bail out its failing fossil fuel fleet.

Section 202(c) limits relief to “emergencies” that exist during continuances of war or times of “sudden” increases in the demand of electricity.⁷ Further, the emergencies envisioned by Section 202(c) are expressly meant to address “temporary” conditions with short-term results.

FES’s “emergency” surrounds nuclear facility closures scheduled to retire 2-3 years from now and coal facilities that *may* retire based on announcements. Thus on its face, the request is not at all temporary or short-term, but looks to implement long-term policy on issues that *may* emerge years in the future. FES raises the issue of preserving “resiliency” during the “Bomb Cyclone” and other winter weather with its

⁵ *Id.* at 2.

⁶ *In the Matter of the Application of Ohio Edison Company, The Cleveland Electric Illuminating, and The Toledo Edison Company for Authority to Provide for a Standard Service Offer Pursuant to R.C. 4928.143 in the form of an Electric Security Plan*, Ohio Supreme Court Case No. 2017-1664, available at <https://www.supremecourt.ohio.gov/clerk/ecms/#/caseinfo/2017/1664>.

⁷ 16 U.S.C. 824a (c)(1).

evocation of the NETL Report in its application. However, PJM seemingly rebuffs the idea that its system's performance during extreme winter weather events poses a looming resiliency crisis.⁸ In fact, PJM, in a statement and letter to U.S. DOE Secretary Perry, stated that there "is no immediate emergency" and attributed the situation that FES finds itself in, not as based on a reliability or resilience crisis, but "fundamentally a corporate issue." Furthermore, the PUCO contradicted FirstEnergy's stance that this is an emergency crisis and FES's recent bankruptcy filing by issuing a statement that "[t]here is no reason for customers of [FirstEnergy Solutions] - or anyone else in Ohio - to be concerned about whether or not they will have electricity. They will."⁹

Case law interpreting Section 202(c) supports denial of FirstEnergy's request. *Richmond Power & Light v. FERC*, a case began in response to the 1973 oil embargo, where the FERC chose not to invoke its emergency authority despite concerns of "dire oil shortfalls."¹⁰ While the Court's decision in *Richmond Power & Light v. FERC* was more than 40 years ago, its reasoning is apt for addressing FES's current request. There, the court ruled that Section 202(c) "speaks of 'temporary' emergencies, epitomized by wartime disturbances, and is aimed at situations in which demand for electricity exceeds supply and not at those in which supply is adequate but a means of fueling its production is in disfavor."¹¹ Here, a decreased desire for fossil fuels and a decreased demand now make inefficient and old coal and nuclear generation uneconomic in PJM's competitive markets and PJM and FERC repeatedly have confirmed that there is not a reliability crisis.

As the OEC expressed in the aforementioned PUCO proceedings, FirstEnergy had access to a state law mechanism and opportunity to request emergency rate structure.¹² FirstEnergy chose not to seek that opportunity, presumably since facts could not support that FirstEnergy's situation was a true emergency. Furthermore, FirstEnergy's profit guarantee request substantially mirrors the Grid Resiliency Pricing proposal that FERC unanimously rejected less than three months ago, finding there was no urgent threat to the grid's reliability.¹³ Similar to that proposal, FirstEnergy's current rendition of its bailout request asks that coal and nuclear plants in PJM be provided a non-market cost-of-service plus profit rate. Instead of seizing the opportunity to request a rehearing of FERC's rejection of the Grid Resiliency Pricing, where the evidence was not on their side, FES chose the current emergency filing. The Department should be skeptical that the FES application meets a reasonable definition of emergency.

Conclusion

FES seeks to impose enormous cost upon consumers, and seeks to undermine the competitive markets. Any "emergency" that FES has is merely a hardship to its bottom line, and not to the reliability of the

¹¹ *Id.* at 613.

¹² Ohio Rev. Code 4928.142(D)(4) states, in part: "the commission may adjust the electric distribution utility's most recent standard service offer price by such just and reasonable amount that the commission determines necessary to address any emergency that threatens the utility's financial integrity..."

¹³ Reliability and Resilience Pricing, Order Terminating Rulemaking Proceeding, Initiating New Proceeding, and Establishing Additional Procedures, 162 FERC ¶ 61,012 (Jan. 8, 2018).

regional electric grid. Thus, any resolution of the Company's financial situation should be left to FES's own devices, and not the pocketbooks of everyday Ohioans. For the reasons outlined above, the OEC asks the Department of Energy to deny the FirstEnergy profit guarantee request.

DEPARTMENT OF ENERGY**

Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.) **DOE Docket No. _____**

**MOTION OF DISTRICT OF COLUMBIA
OFFICE OF THE PEOPLE'S COUNSEL'S
MOTION TO INTERVENE**

District of Columbia Office of the People's Counsel ("DC-OPC" or "Office"), by and through its counsel, hereby moves to intervene in the above-captioned proceeding and protests the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. ("FES"), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES issued a letter ("Request") to the Energy Secretary James Richard Perry requesting that the Secretary invoke emergency authority under Federal Power Act Section 202(c) to find that an emergency condition exists in the PJM Interconnection ("PJM") territory that requires immediate intervention. In its request, FES seeks for the Secretary to order "certain existing nuclear and coal-fired generators" to contract with PJM for energy, capacity, and ancillary services to "maintain the stability of the electric grid." Further, FES requests that the Secretary order PJM to "promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide." FES has served the Request on numerous affected parties.

II. MOTION TO INTERVENE

DC-OPC is an independent agency of the District of Columbia government and serves as the statutory representative of District of Columbia ratepayers and consumers with respect to utility matters. By law, DC-OPC is the advocate for consumers of natural gas, electric and telephone services in the District and serves as a party to all utility-related proceedings before the District of Columbia Public Service Commission. Additionally, the Office represents the interests of District ratepayers before federal regulatory agencies, such as DOE, EPA, FERC and the FCC. The Office is also authorized to investigate the operation and valuation of utility companies independent of any pending proceeding.

The Office's mandate is to advocate the provision of quality utility service and equitable treatment of rates that are just, reasonable, and nondiscriminatory as well as to assist individual consumers in disputes with utility companies about billing or services; and to provide technical assistance and consumer education to lay advocates and community groups. In addition, in defining its positions while advocating on matters pertaining to the operation of public utility or energy companies, the Office considers the public safety, the economy of the District of Columbia, the conservation of natural resources, and the preservation of environmental quality.

If the Request of FES is granted, payments made pursuant to the Emergency Order may be recovered from consumers throughout the PJM region, which includes the District of Columbia ratepayers. DC-OPC opposes the Request and reserves the right to supplement this preliminary pleading to explain, in detail, why the Request would result in unjust treatment and therefore should be rejected.

DC-OPC moves to intervene under Rule 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure. As Rule 214(b)(2) requires, DC-

OPC has a significant and direct interest in this proceeding's outcome. Further, DC-OPC's role as an advocate for D.C. ratepayers makes DC-OPC's participation in the public interest.

III. SERVICE OF DOCUMENTS

DC-OPC designates the following persons to receive service and communications on its behalf with regard to this proceeding:

Sandra Mattavous-Frye, Esq.
People's Counsel
Office of the People's Counsel
1133 15th Street NW, Suite 500
Washington, DC 20005
(202) 727-3071
smfrye@opc-dc.gov

Frederick Heinle, Esq.
Adrienne Mouton-Henderson, Esq.
Assistant People Counsels
1133 15th Street NW, Suite 500
Washington, DC 20005
(202) 727-3071
fheinle@opc-dc.gov
ahenderson@opc-dc.gov

IV. STATEMENT OF OPPOSITION

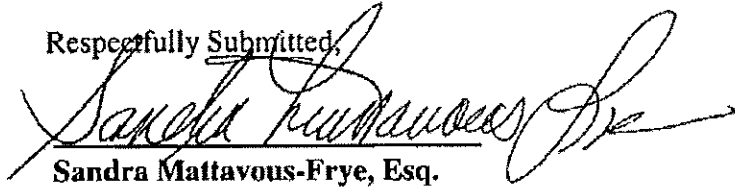

Rule 214(b)(1) requires the movant to state its preliminary position. DC-OPC opposes granting the relief FES seeks. The available evidence, not cited in this Request, demonstrates that no emergency condition exists and the requested relief is unnecessary.

DC-OPC respectfully urges the Department to give all interested parties sufficient time to present their responses to the Request before the Department rules on the Request. Accordingly, DC-OPC supports the Electric Power Supply Associations' request filed Friday, March 30, 2018 seeking a 60-day comment period.

V. CONCLUSION

For the foregoing reasons, DC-OPC respectfully requests that the Department grant DC-OPC's motion to intervene in this proceeding and, if the Department does not reject the FES Request outright, provide all interested parties 60 days to file comments on the Request.

Respectfully Submitted,

Sandra Mattavous-Frye, Esq.

Re: Motion to Intervene of the Maryland Office of People's Counsel

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

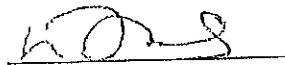

Attached is the Motion to Intervene of the Maryland Office of People's Counsel (MPC) in the matter concerning FirstEnergy Solutions Corp.'s (FirstEnergy Solutions)

Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza
April 4, 2018
Page 2

Request for Emergency Action under Section 202(c) of the Federal Power Act. MPC is an independent state agency established to represent the interests of residential customers in utility matters. Maryland Public Utilities Code Annotated, Section 2-205(b)(2016). All of Maryland is in the PJM Interconnection, L.L.C. region and the relief requested by FirstEnergy Solutions would affect the cost of electricity for Maryland electricity customers. MPC opposes FirstEnergy's emergency request. If this request is not denied outright, the department should establish an extended period for public comment before taking action.

Respectfully Submitted,

Paula M. Carmody
People's Counsel

William F. Fields
Senior Assistant People's Counsel

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.) DOE Docket No. _____**

MOTION TO INTERVENE OF THE MARYLAND OFFICE OF PEOPLE'S COUNSEL

Pursuant to Rules 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (the "Commission"), 18 C.F.R. §§385.212 and 385.214, the Maryland Office of People's Counsel ("MPC") hereby seeks Leave to Intervene in the above-captioned proceeding. In support of this Motion, MPC states the following:

1. MPC is an independent state agency that was established to represent the interests of residential consumers in utility cases. Pursuant to Maryland Public Utility Companies Code Annotated, Section 2-205(b)(2016), the People's Counsel "may appear before any federal or state agency as necessary to protect the interests of residential...users of [gas, electricity or other regulated services]."

2. The name, address, telephone, facsimile and e-mail address of the Maryland Office of People's Counsel's designated representative for receipt of service in this proceeding is:

William F. Fields
Senior Assistant People's Counsel
Maryland Office of People's Counsel
6 St. Paul Street, Suite 2102
Baltimore, Maryland 21202
(410) 767-8150
(410) 333-3616 (facsimile)
William.fields@maryland.gov (e-mail)

3. On March 29, 2018, FirstEnergy Solutions, Corp. ("FES") filed a letter requesting emergency action by the Secretary of Energy pursuant to Section 202(c) of the Federal Power Act.

FES requests that the Secretary issue an order that would require PJM Interconnection, L.L.C. ("PJM") to contract with generating plant owned by FES, as well as coal and nuclear plants owned by other entities, to purchase the output of the plants.

4. In January, 1999, the Maryland General Assembly passed the Electric Customer Choice and Competition Act of 1999. Maryland Public Utility Companies Code Annotated, Section 7-501, *et. seq.* (2007). This act institutes competition for retail electric service beginning July 1, 2000. All retail customers in Maryland purchase electricity from suppliers that operate in the PJM market.

5. If the FES request is granted, there would be a significant cost impact on consumers throughout PJM, including customers in Maryland.

6. The specific interests of Maryland residential consumers are not adequately represented by other parties to this matter, and that MPC's intervention is necessary in order to protect these interests.

7. MPC is opposed to the FES request. FPA §202(c) requires a finding of an emergency in order to act. All available evidence indicates that there is no emergency at this time and no justification for granting the relief requested by FES. PJM has announced that it has begun its evaluation of the reliability impacts of the plant closings announced by FES. There are means under the existing PJM tariff to address any reliability issues that are found to exist if the plants retire. The PJM tariff allows for a 90-day window for the PJM analysis process. The announced FES plant retirements are far more than 90 days in the future. There will be more than adequate time to address any reliability concerns that arise from the potential closing of the FES plants. With respect to generating plants owned by other entities, there is no basis for finding that any action with respect to those plants is necessary or appropriate.

8. MPC respectfully requests that the Secretary deny the FES request. If the request

**Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.)**

DOE Docket No. _____

**MOTION TO INTERVENE
OF THE PUBLIC SERVICE COMMISSION OF THE DISTRICT OF COLUMBIA**

The Public Service Commission of the District of Columbia (“D.C. PSC”) hereby moves to intervene in the above-captioned proceeding and protest the March 29, 2018, Request for Emergency Order Pursuant to Federal Power Act (“FPA”) Section 202(c) by FirstEnergy Solutions Corp. (“FES”), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES submitted a letter (“FES Request”) to the Honorable James Richard Perry, Secretary (“Secretary”) of the Department of Energy (“Department”), requesting that the Secretary use emergency authority under Section 202(c) of the FPA to find that an emergency condition exists in the PJM Interconnection, L.L.C. (“PJM”) territory requiring immediate intervention. FES requests that the Secretary: (a) order “certain existing nuclear and coal-fired generators . . . to enter into contracts” with PJM to generate and transmit energy, capacity, and ancillary services to “maintain the stability of the electric grid;” and (b) order PJM to “promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide” to energy markets and the public.

II. MOTION TO INTERVENE

The D.C. PSC is an independent agency of the District of Columbia created by the District of Columbia Home Rule Charter to ensure that public utilities doing business in the District provides reasonable, safe, and adequate service and facilities and that their rates are just and reasonable. The D.C. PSC has plenary supervision over all electric companies in the District of Columbia (D.C. Code §§ 1-204.93 and 34-301 (2001 Ed.)). Accordingly, the D.C. PSC is a “state commission” within the meaning of Rule 214(a)(2) of the Commission’s Rules of Practice and Procedure and is entitled to intervene in this proceeding as of right.

The District of Columbia is within the footprint of PJM, and if FES’s requested relief is granted, responsibility for payments made pursuant to the Emergency Order will be recovered from consumers throughout the PJM region, including District of Columbia residents. The D.C. PSC strongly objects to the FES Request and reserves the right to supplement this preliminary pleading to explain, in detail, why the FES Request is unsupported, unlawful, and should be rejected.

The D.C. PSC moves for intervention under Rule 214 of the Commission’s Rules of Practice and Procedure.¹ In conformity with Rule 214(b)(2), the D.C. PSC has a significant and direct interest in the outcome of this proceeding as every electricity customer in the District of

¹ The Commission’s Rules of Practice and Procedure should be used for procedural guidance in Emergency Order proceedings. *See* DOE Answer to Procedural Questions Concerning Rehearing of DOE Order, *District of Columbia Public Service Commission*, Docket No. EO-05-01 (December 30, 2005) at 2.

Columbia will be immediately and severely affected. The D.C. PSC's participation in this proceeding is in the public interest.

III. SERVICE OF DOCUMENTS

The following persons are designated by the D.C. PSC to receive service and communications on its behalf with regard to this proceeding:

Christopher Lipscombe
General Counsel
D.C. Public Service Commission
1325 G Street, N.W., Suite 800
Washington, D.C. 20005
202-626-9185
clipscombe@psc.dc.gov

Craig Berry
Attorney Advisor
D.C. Public Service Commission
1325 G Street, N.W., Suite 800
Washington, D.C. 20005
202-626-9181
cberry@psc.dc.gov

Naza Shelley
Attorney Advisor
D.C. Public Service Commission
1325 G Street, N.W., Suite 800
Washington, D.C. 20005
202-626-0200
nshelley@psc.dc.gov

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. The D.C. PSC opposes the departure from competitive markets sought by FES. The FES Request failed to make the requisite showing of an “emergency” under the definition of Section 202(c) of the FPA and instead misinterpreted available data to support its “general dissatisfaction with the PJM markets or its competitive position therein.”² The Secretary has only granted a request of this nature in five (5)

² PJM letter to The Honorable James Richard Perry, filed in this proceeding on March 30, 2018, at n. 1.

instances; in each, a clear emergency had been demonstrated. For example, in 2005, the Secretary granted the D.C. PSC's petition for emergency relief under Section 202(c) when one of the three close proximity generating facilities serving the District of Columbia was threatened with closure due to environmental compliance issues, because: (1) there was a "reasonable possibility an outage w[ould] occur that would cause a blackout;" (2) "the number and importance of facilities and operations in our Nation's Capital that would be potentially affected by such a blackout, the extended number of hours of any blackout that might in fact occur;" and (3) "the current situation violates applicable reliability standards."³ Our petition, which clearly demonstrated an immediate and sustained threat to grid reliability, stands in sharp contrast to the FES Request, which is overbroad and fails to substantiate the requested relief.

In a similar proceeding, responding to nearly identical arguments,⁴ the Commission utilizing its relevant industry expertise, determined that, "[w]hile some commenters allege grid resilience or reliability issues [exist] due to potential retirements of particular resources, we find that these assertions do not demonstrate the unjustness or unreasonableness of the existing RTO/ISO tariffs. In addition, the extensive comments submitted by the RTOs/ISOs do not point to any past or planned generator retirements that may be a threat to grid resilience."⁵ The Commission also established additional proceedings to ensure that all facets of grid reliability and resilience were thoroughly vetted in an orderly and transparent fashion.

³ See Order No. 202-05-3, *District of Columbia Public Service Commission*, Docket No. EO-05-01 (December 20, 2005) at 6.

⁴ See Comments of FES et al. in support of the Grid Reliability and Resilience Pricing Notice of Proposed Rulemaking, Commission, Docket No. RM18-1 (October 23, 2017).

⁵ 162 FERC ¶ 61,012 (2018) at P 15. (internal citations omitted).

Based on the foregoing, the FES Request should be denied. However, the D.C. PSC respectfully urges the Department to give all interested parties sufficient time to fully present their responses to the FES Request before issuing a determination. Accordingly, the D.C. PSC supports the Electric Power Supply Association's request seeking a 60-day comment period that was filed in this proceeding on March 30, 2018.

V. CONCLUSION

For the reasons set forth above, the D.C. PSC respectfully requests that the Department grant its motion to intervene in this proceeding. Further, the D.C. PSC asks that the Department reject the FES Request on the record as it stands, or, in the alternative, provide all interested parties with 60 days to file comments.

RE: Motion of the New Jersey Board of Public Utilities to Intervene

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Please accept this letter and attached Motion of the New Jersey Board of Public Utilities ("NJBP") to intervene in this proceeding concerning FirstEnergy Solutions Corp.'s ("FES") Request for Emergency Action under Section 202(c) of the Federal Power Act. If the Request is

granted, payments made pursuant to the Emergency Order may be recovered from customers (ratepayers) throughout the PJM Interconnection, L.L.C. region, including ratepayers in New Jersey.

The NJBPU is the administrative agency charged under New Jersey law with the general supervision, regulation, jurisdiction, and control over all public utilities in the State of New Jersey ("State"), including electric and gas utilities and their rates and service. N.J.S.A. 48:2-13; N.J.S.A. 48:2-21. The NJBPU is a state regulatory commission, as recognized by the Federal Power Act, 16 U.S. Code § 824, and Rule 214(a)(2) of the Federal Energy Regulatory Commission's ("FERC") Rules of Practice and Procedure, which governs intervention before FERC.

The NJBPU seeks to intervene in this proceeding in the interest of New Jersey ratepayers. Further, NJBPU opposes this FES request for emergency action and asks that the Department immediately reject the FES Request, or, in the alternative, provide all interested parties with 60 days to file comments.

Respectfully submitted,

GURBIR S. GREWAL

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.)**

DOE Docket No. _____

**MOTION TO INTERVENE OF THE
NEW JERSEY BOARD OF PUBLIC UTILITIES**

The New Jersey Board of Public Utilities (“NJBPU”) hereby moves to intervene in the above-captioned proceeding and protests the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. (“FES”), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES sent a letter (“FES Request”) to the Honorable James Richard Perry, Secretary of the Department of Energy (“Department”), requesting that the Secretary use emergency authority under Section 202(c) of the Federal Power Act to find that an emergency condition exists in the PJM Interconnection, L.L.C. (“PJM”) territory requiring immediate intervention. The FES Request seeks two forms of relief: that the Secretary (a) order “certain existing nuclear and coal-fired generators . . . to enter into contracts” with PJM to generate and transmit energy, capacity, and ancillary services to “maintain the stability of the electric grid” and (b) order PJM to “promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide” to energy markets and the public. The FES Request includes an undated

Certification of Service claiming that it was served on over 100 owners of generation, transmission, or distribution assets, state public utility commissions, including the NJBPU, and others.¹

II. INTERVENTION

The NJBPU is the administrative agency charged under New Jersey law with the general supervision, regulation, jurisdiction, and control over all public utilities in the State of New Jersey (“State”), including the obligation to ensure that utilities provide safe, adequate and proper service at a just and reasonable rate.² The NJBPU is a state regulatory commission, as recognized by the Federal Power Act, 16 U.S. Code § 824, and Rule 214(a)(2) of the Federal Energy Regulatory Commission’s (“FERC” or “Commission”) Rules of Practice and Procedure, which governs intervention before FERC.

If the FES Request is granted, payments made pursuant to the Emergency Order may be recovered from customers (ratepayers) throughout the PJM region, including ratepayers in New Jersey. In conformity with Rule 214, the NJBPU has a significant and direct interest in the outcome of this proceeding as electricity customer throughout the PJM region, including New Jersey, will be affected. Given this risk to New Jersey ratepayers, NJBPU seeks to intervene in this proceeding and protests the FES Request. NJBPU further reserves the right to supplement this preliminary pleading to explain, in detail, why the FES Request should be rejected. NJBPU’s intervention in this proceeding is in furtherance of the public interest and should be granted.

¹ NJBPU has yet to receive service of the FES Request. It appears that FES sent a copy of its Request dated March 30, 2018 to NJBPU Commissioner Richard Mroz. The Request was not received until April 4, 2018, but, regardless, was not properly served on the NJBPU.

² See N.J.S.A. 48:2-13; N.J.S.A. 48:2-21; N.J.S.A. 48:2-23.

III. COMMUNICATIONS

All communications with respect to this matter should be addressed as follows:

(973) 648-3441
timothy.oberleiton@law.njoag.gov
carolyn.mcintosh@law.njoag.gov
alex.moreau@law.njoag.gov

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. NJBPU opposes granting the relief sought by the FES Request. The FES Request has failed to make the requisite showing of an emergency under the definition of Section 202(c). Therefore, it should be rejected.

In a similar proceeding, responding to nearly identical arguments,³ the Commission determined that, “[w]hile some commenters allege grid resilience or reliability issues [exist] due to potential retirements of particular resources, we find that these assertions do not demonstrate the unjustness or unreasonableness of the existing RTO/ISO tariffs. In addition, the extensive comments submitted by the RTOs/ISOs do not point to any past or planned generator retirements that may be a threat to grid resilience.”⁴ The Commission also initiated a new proceeding, under Docket No. AD18-7-000, to holistically examine the resilience of the bulk power system. In doing so, the Commission recognized that “it must remain vigilant with respect to resilience challenges, because

³ See Comments of First Energy Service Co., et al. in support of the Grid Reliability and Resilience Pricing Notice of Proposed Rulemaking, Docket No. RM18-1 (Filed Oct. 23, 2017)

⁴ 162 FERC ¶ 61,012 (2018) at P 15 (internal citations omitted).

affordable and reliable electricity is vital to the country's economic and national security.”⁵ That proceeding is on-going. NJBPU asks that the Department consider this separate proceeding in its review of the FES Request.

Moreover, NJBPU respectfully urges the Department to give all interested parties sufficient time to present their responses to the FES Request before issuing a determination. Accordingly, the NJBPU supports and joins the numerous requests filed in this proceeding seeking a 60-day comment period.

V. CONCLUSION

For the reasons set forth above, NJBPU respectfully requests that the Department grant its motion to intervene in this proceeding. Further, NJBPU protests the FES request and asks that the Department immediately reject the FES Request, or, in the alternative, provide all interested parties with 60 days to file comments.

Counsel to the PJM Industrial Customer Coalition
and on behalf of the PJM Consumer
Representatives

Dated April 5, 2018

TABLE OF CONTENTS

I.	PROTEST.....	3
A.	Section 202(c) of the Federal Power Act is Very Limited in Scope, and FES’s Attempt to Apply Section 202(c) Beyond Its Intended Scope is Unlawful.....	4
1.	Section 202(c) confines emergencies to specific, imminent events, and any solutions must be specific and temporary.	4
2.	FES’s Request seeks an Emergency Order that would be illegal and that would violate Section 202(c).....	6
B.	The Scope of the Requested Emergency Order is Unprecedented, Overbroad, and Impermissibly Seeks to Override Existing Statutory and Regulatory Authority and FERC and DOE Precedent.	9
1.	The scope of the Request is inconsistent with the Department’s prior issuances of Emergency Orders.....	9
2.	The Request seeks to vest the Department with ratemaking authority that properly resides with the Federal Energy Regulatory Commission.	13
3.	The Request seeks relief that does not constitute “just and reasonable” compensation under the Federal Power Act.	15
4.	The Request ignores decades of precedent by seeking cost-based rates that seek to reverse the owner’s write-down of the asset value.	17
C.	FES Has Not Substantively Demonstrated that an Emergency Exists.	19
1.	PJM is not facing premature retirements of coal and nuclear generating facilities; rather, units are retiring due to correct economic signals.	20
a.	<i>Ample capacity reserve margins in PJM demonstrate that retirements have not been premature.</i>	20
b.	<i>Many coal-fired generation facilities have reached the end of their remaining useful life, triggering retirement.</i>	22
c.	<i>Nuclear plant retirements have been driven by economics, local politics, and equipment failures.....</i>	22
d.	<i>The use of RMR agreements has been infrequent.....</i>	24

2.	The recent Bomb Cyclone weather events and resulting NETL Report do not justify FES's request for DOE to prop up uneconomic coal and nuclear units in PJM.	25
3.	The Polar Vortex does not justify FES's request for DOE to prop up uneconomic coal and nuclear units in PJM.	28
a.	<i>PJM has already adopted changes in response to the 2014 Polar Vortex.</i>	28
b.	<i>The 2014 Polar Vortex demonstrates that lessons learned have been successful.</i>	28
4.	The bankruptcy filing by FES, subsequent to its Request to DOE, undermines FES's claims of "emergency."	31
5.	On-site fuel supply is not a significant contribution to reliability and resilience.	32
D.	If Reliability Concerns Were to Arise, PJM Has in Place Adequate Processes For Addressing Those Concerns.	32
E.	If Granted, the Request Would Unnecessarily Raise Energy Prices For Consumers and Directly Undercut the Tremendous Economic Advantage to the United States from Natural Gas Shale Plays.	34
F.	FES's Argument that Energy Price Formation in PJM Does Not Adequately Compensate Baseload Resources is Invalid and Inappropriate in an Emergency Order Request; FES's Argument on Price Formation is More Appropriately Presented and Examined in the Ongoing PJM Stakeholder Process.	37
1.	Resilience is already a critical part of reliability assessments.	37
2.	FES has not demonstrated a dearth of capacity in PJM.	38
3.	Energy prices are currently reflecting lower fuel prices.	39
4.	Confidence in markets is tested when changes to energy market price formation can be viewed as a thinly veiled effort to provide price support for certain classes of resources.	40
5.	Unit inflexibility should not be used as an excuse to inflate energy prices.	41
6.	Adoption of changes to energy pricing rules would severely disrupt contracting for retail supply.	42

G.	FES Seeks to Undermine the Commission’s Recent Order Rejecting the Grid Resiliency Pricing Proposal and the Ongoing FERC Grid Resilience Proceeding and Stakeholder Processes.	44
1.	FES failed to request rehearing of the Commission’s January 8 Order rejecting the Grid Resiliency Pricing proposal.....	44
2.	The Commission’s Resilience Docket and PJM’s ongoing stakeholder processes are more appropriate forums to address FES’s concerns.	45
3.	FES’s Emergency Order Request proceeding should not be used to short-circuit or circumvent any stakeholder and FERC processes that are currently investigating and evaluating price formation changes.....	45
H.	FES’s Clearing of the BRA Through the 2020/2021 Delivery Year Demonstrates that FES Currently Has an Obligation, and Associated Compensation For that Obligation, to Run Its Units Through May 31, 2021.....	47
II.	CONCLUSION	49

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

Request for Emergency Order Pursuant
To Federal Power Act Section 202(c) By
FirstEnergy Solutions Corp.

)
)
)
)
)

DOE Docket No. _____

**PROTEST OF THE
PJM CONSUMER REPRESENTATIVES
TO THE EMERGENCY ORDER REQUEST
OF FIRSTENERGY SOLUTIONS CORP.**

On March 29, 2018, FirstEnergy Solutions Corp. (“FES”) submitted a Request for Emergency Order Pursuant to Federal Power Act Section 202(c)¹ (“Request” or “Emergency Order Request”) to the Secretary of the Department of Energy (“DOE” or “Department”). Pursuant to Rule 211 of the Federal Energy Regulatory Commission’s (“Commission” or “FERC”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.211, the PJM Consumer Representatives hereby protest the FES’s Request.²

¹ 16 U.S.C. § 824a(c).

² Federal Power Act Section 202(c) and the Department indicate that the Federal Power Act and the Commission’s Rules of Practice and Procedure should be used for procedural guidance in Emergency Order proceedings. Guidance published on the Department’s website points to the Commission’s Rules where DOE regulations at 10 C.F.R. § 205.370, et. seq., are silent. *See, e.g.,* DOE Answer to Procedural Questions Concerning Rehearing of DOE Order, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 30, 2005) at 2. Additionally, the Department has taken the position that the procedure for judicial review of emergency orders under Section 202(c) of the Federal Power Act must be secured through Section 313 of that Act, 16 U.S.C. § 8251. *See, e.g.,* Order No. 202-05-3, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 20, 2005) at 11-12. The plain language of Section 202(c)(5) of the Federal Power Act, enacted in 2016, reinforces this principle. Where, as here, a proceeding exists under Chapter 12 of the Federal Power Act, the Commission’s Rules of Practice and Procedure apply. *See* 16 U.S. Code § 825g(b) (Federal Power Act § 308) (“All hearings, investigations, and proceedings under this chapter shall be governed by rules of practice and procedure to be adopted by the Commission.”).

For purposes of this Protest, the PJM Consumer Representatives are comprised of the following:

PJM Industrial Customer Coalition

State of Delaware Division of the Consumer Advocate

Industrial Energy Consumers of America

West Virginia Consumer Advocate

New Jersey Division of Rate Counsel

West Virginia Energy Users Group

Pennsylvania Office of Consumer Advocate

Chemistry Council of New Jersey

Public Power Association of New Jersey

Delaware Public Service Commission

District of Columbia Office of People's Counsel

American Municipal Power, Inc.

Old Dominion Electric Cooperative

American Forest & Paper Association

Southern Maryland Electric Cooperative, Inc.

Maryland Office of People's Counsel

Illinois Industrial Energy Consumers

The Association of Business Advocating Tariff Equity

American Foundry Society

Indiana Office of Utility Consumer Counsel

Indiana Industrial Energy Consumers, Inc.

Ohio Chemistry Technology Council

American Chemistry Council

Industrial Energy Users – Ohio

Illinois Citizens Utility Board

Industrial Minerals Association – North America

National Industrial Sand Association

Pennsylvania Energy Consumer Alliance

I. PROTEST

FES requests the Secretary of the DOE (“the Secretary”) to use the vehicle of an emergency order to require consumers in the PJM Region to bail out certain types of generation assets that have become uneconomic. The Request is framed in alarming and urgent language, but many of the premises underlying the Request are vastly overstated or demonstrably false. FES fails to acknowledge existing procedures to safeguard essential assets and protect reliability without imposing unjust, unreasonable, and unduly discriminatory costs on consumers in the PJM Region; fails to acknowledge substantial evidence of PJM’s successful reliability measures and actions over the past few years; and fails to demonstrate that a true Section 202(c) emergency exists. The Request fails to demonstrate why nuclear and coal generation facilities should receive a bail-out, likely forcing consumers to absorb significant additional and unnecessary costs.

The Request fails as a matter of fact and law for the following reasons:

- Section 202(c) of the Federal Power Act is very limited in scope, and FES’s attempt to apply Section 202(c) beyond its intended scope is unlawful.
- FES’s Emergency Order Request is unprecedented and overbroad.
- FES has not demonstrated that an emergency exists.
- If reliability concerns were to arise, PJM has in place adequate processes for addressing those concerns.

- If granted, the Request would unnecessarily raise energy prices for consumers and directly undercut the tremendous economic advantage to the United States from natural gas shale plays.
 - FES's argument that energy price formation in PJM does not adequately compensate baseload resources is invalid and inappropriate in an emergency order request; FES's argument on price formation is more appropriately presented and examined in the ongoing PJM stakeholder process.
 - FES seeks to undermine the recent Commission order rejecting the grid resiliency pricing proposal and the ongoing FERC grid resiliency proceeding (Dockets AD18-7 and RM18-1) and other stakeholder processes.
 - FES's clearing of the Base Residual Auction ("BRA") through 2020-2021 demonstrates that FES currently has an obligation, and associated compensation for that obligation, to run its units through May 31, 2021.
- A. Section 202(c) of the Federal Power Act is Very Limited in Scope, and FES's Attempt to Apply Section 202(c) Beyond Its Intended Scope is Unlawful.**
- 1. Section 202(c) confines emergencies to specific, imminent events, and any solutions must be specific and temporary.**

Section 202(c) of the Federal Power Act confers certain emergency powers upon the Secretary.³ Importantly, Section 202(c) confines emergencies to specific, imminent events. Section 202(c) of the Federal Power Act grants the Department authority over "the generation of electric energy" in the following circumstances: (1) during wartime; or (2) if "the [Department] determines that an emergency exists by reason of a sudden increase in the demand for electric energy, or a shortage of electric energy or of facilities for the generation or transmission of electric energy, or of fuel or water for generating facilities, or other causes."⁴

The text of the statute provides inherent limitations on the emergency powers and confines Emergency Orders to specific, imminent events. First, the term "exists" indicates a present tense concern—not a distant possibility several years in the future. Second, the term "emergency" is

³ See 16 U.S.C. § 824a(c).

⁴ 16 U.S.C. § 824a(c).

defined by Merriam-Webster's Dictionary as "an unforeseen combination of circumstances or the resulting state that calls for immediate action."⁵ Elsewhere, the same dictionary references an emergency as applying "to a sudden unforeseen situation requiring prompt action to avoid disaster."⁶ This indicates a situation that is imminent and unavoidable. Third, the statute's reference to "wartime powers" indicates the type of factual context Congress intended for the Emergency Order power to be used. The D.C. Circuit has affirmed this view, stating that Section 202(c) "speaks of 'temporary' emergencies, epitomized by wartime disturbances"⁷ and that the statute is reasonably understood to exclude circumstances such as "dependence on imported oil." Finally, the use of the words "sudden" and "shortage" reinforce the statutory context of an immediate need.⁸

Moreover, Emergency Orders are intended to provide for only temporary solutions. The text of Section 202(c) indicates an Emergency Order may "require . . . such *temporary connections of facilities* and such generation, delivery, interchange, or transmission of electric energy as in its judgment will best meet the emergency and serve the public interest." Gradual industry changes affecting certain types of generation resources do not constitute a sudden emergency requiring immediate action.

The development of the Federal Power Act also confirms that the authority for Emergency Orders under Section 202(c) is limited to unusual, unexpected circumstances. In 2005, Congress added Section 215 of the Federal Power Act, establishing an Electric Reliability Organization and

⁵ Definition of "emergency," Merriam-Webster's Dictionary 407 (11th ed. 2004).

⁶ Definition of "juncture," Merriam-Webster's Dictionary 678 (11th ed. 2004). The definition of "juncture" further includes this additional definition of "emergency."

⁷ See *Richmond Power and Light v. Federal Energy Reg. Comm.*, 574 F.2d 610, 615 (D.C. Cir. 1978).

⁸ See *Jarecki v. G.D. Searle & Co.*, 367 U.S. 303, 307 (1961) (statutory terms should be interpreted in context of nearby parallel terms "in order to avoid the giving of unintended breadth to the Acts of Congress").

specifying procedures, remedies, and timeframes for federal reliability standards.⁹ As aptly noted in Sierra Club’s response to FES’s Emergency Order Request, prior to the Energy Policy Act of 2005, “the reliability of the nation’s bulk-power system depended on participants’ *voluntary* compliance with industry standards.”¹⁰ Consequently, Federal Power Act provisions that predated the Energy Policy Act, including Section 202(c), were not intended to provide the federal government with authority to enforce broad, long-term reliability requirements. That authority commenced with the Energy Policy Act of 2005, and that authority rests with the Commission, not the Department. Finally, broad ratemaking authority rests with the Commission—not the Department—and is addressed in other provisions within the Federal Power Act. As discussed in further detail below, FES’s Request unlawfully exceeds the scope of the Department’s authority under Section 202(c) in each of these respects.

2. FES’s Request seeks an Emergency Order that would be illegal and that would violate Section 202(c).

FES’s Request is unlawful because it: (1) does not present substantial evidence of an imminent threat to reliability and, even if it did, (2) the requested relief far exceeds the intended breadth of relief and the Department’s authority under 202(c). In Section B of this Protest, the PJM Consumer Representatives demonstrate that the scope of FES’s requested Emergency Order is unprecedented, overbroad, and impermissibly seeks to override existing statutory and regulatory authority as well as FERC and DOE precedent. In Section C of this Protest, the PJM Consumer Representatives explain that FES failed to substantively demonstrate an emergency exists in PJM.

⁹ See generally 16 U.S.C. § 825o.

¹⁰ Sierra Club Comments at 6 (quoting *Alcoa, Inc. v. FERC*, 564 F.3d 1342, 1344 (D.C. Cir. 2009) (emphasis added) (filed with DOE on Mar. 30, 2018)).

While Section 202(c) confers certain emergency powers upon the Secretary,¹¹ FES ignores the text of Section 202(c)'s limitations on the use of emergency power as emergencies are specific, imminent events. FES has failed to even state a case that the potential retirement of certain generation assets, several years from now, meets the definition of an emergency. FES passionately advocates for Secretarial intervention without demonstrating that there is an imminent need for intervention for any specific generation unit.

The text of Section 202(c) describes the core power of an Emergency Order to order “*generation, delivery, interchange or transmission of electric energy.*”¹² FES's Request asks for nothing of the sort. The Request fails to identify any generation or other resource that the Secretary should order to be activated or connected.¹³ Instead, the Request is purely financial in nature, asking the Secretary to override existing contracts for assets that are *already* generating electricity. In other words, this Request is about a self-perceived crisis of compensation, not a generation emergency.

FES's urgent and descriptive language cannot conceal the fact that, *even if FES's factual claims were to be believed*, FES's claimed “emergency” is several years away. In the Request, FES did not show that any alternative courses of action were unavailable to address its self-perceived crisis, and it did not demonstrate why the emergency request, *at this time*, is prudent and necessary. FES cites to no current shortfall in power supply. Giving any credence whatsoever to FES's Emergency Order Request would pave the way for other entities to assert an emergency

¹¹ See 16 U.S.C. § 824a(c).

¹² 16 U.S.C. § 824a(c)(1), (2) (emphasis added).

¹³ 10 C.F.R. § 205.373(h) requires an Emergency Order Request to include “[a] description of efforts made to obtain additional power through voluntary means and the results of such efforts.” FES stated this was PJM's responsibility. Request at 29. However, FES could not provide this information because its Request does not ask the Secretary to order additional generation. The Request is simply seeking additional *compensation* for its current generation assets.

whenever their self-perceived crises are only economic and result from the inevitable changing mix of generation resources. Declaring an emergency now, as FES requests, runs directly contrary to the following provision of 10 C.F.R. § 205.371: “Situations where a shortage of electric energy is projected due solely to the failure of parties to agree to terms, conditions, or other economic factors relating to service, generally will not be considered emergencies *unless the inability to supply electric service is imminent.*”¹⁴ FES’s Request fails to state any imminent or specific threat that meets the definition of “emergency” under the statute or its associated regulations.¹⁵

The Department’s regulations define “emergency” in 10 C.F.R. § 205.371 as “an unexpected inadequate supply of electric energy which may result from the unexpected outage or breakdown of facilities for the generation, transmission or distribution of electric power.” Section 371 lists six causes of an emergency: (1) weather conditions, (2) acts of God, (3) unforeseen circumstances not preventable by the “entity,” (4) sudden increase in customer demand, (5) inability to obtain adequate amounts of the fuels necessary to generate electricity, or (6) regulatory action prohibiting certain power supply facilities. FES’s Request matches none of these causes. More importantly, FES has shown no “unexpected inadequate supply of electric energy,” as required by the Department’s regulations.¹⁶

¹⁴ Emphasis added.

¹⁵ As stated in the Sierra Club’s Comments at 6:

Reading section 202(c) to permit direct enforcement of reliability requirements through emergency orders would bypass the limits and procedures that Congress enacted in section 215 to constrain such enforcement. See *California Independent System Operator Corp. v. FERC*, 372 F.3d 395, 401-2 (D.C. Cir. 2004) (“Congress’s specific and limited enumeration of [agency] power over [particular matter] in [one section of Federal Power Act] is strong evidence that [separate section] confers no such authority on [agency].”).

¹⁶ See 10 C.F.R. § 205.371.

A Section 202(c) Emergency Order may only be issued to address “a specific inadequate power supply situation.”¹⁷ FES can point to no such specific situation and only provides general arguments about what could happen years down the road. In *Richmond Power*, the Commission declined, as improper under Section 202(c), a request to use emergency authority to address “broad questions of resource allocation,” and the D.C. Circuit affirmed.¹⁸ To attempt to enact broad-based sweeping changes through emergency authority is not only ill-advised, but illegal. The Secretary should reject FES’s Request for the same reasons the Commission declined to act under Section 202(c) in the case that led to the *Richmond Power* opinion by the D.C. Circuit.

B. The Scope of the Requested Emergency Order is Unprecedented, Overbroad, and Impermissibly Seeks to Override Existing Statutory and Regulatory Authority and FERC and DOE Precedent.

1. The scope of the Request is inconsistent with the Department’s prior issuances of Emergency Orders.

In the Request, FES seeks an Emergency Order directing “certain existing nuclear and coal-fired generators in PJM...to enter into contracts and all necessary arrangements with PJM, on a plant-by-plant basis...”¹⁹ As to those “certain existing nuclear and coal-fired generators in PJM,” FES attaches to the Request a list (Attachment A) with nuclear and coal-fired generating units in PJM, many of which are not owned by FES. Aside from requesting overbroad relief that lacks specificity and is not tied to discrete issues at specific units it owns, FES violates the legal principle of standing by seeking relief for facilities it does not own.²⁰

¹⁷ 10 C.F.R. § 205.371.

¹⁸ *Richmond Power and Light v. Federal Energy Reg. Comm.*, 574 F.2d 610, 615-16 (D.C. Cir. 1978) (rejecting a claim that the 1973 oil embargo warranted an order, the court said that Section 202(c) is “aimed at situations in which demand for electricity exceeds supply and not at those in which supply is adequate but a means of fueling its production is in disfavor”).

¹⁹ Request at 1.

²⁰ In response to FES’s Request, PJM has noted that FES’s Request curiously seeks relief for FES’s entire merchant fleet as well as relief for all other coal and nuclear units in PJM, totaling over 80 generation units. PJM Letter to

Past Emergency Orders issued by the Department have been narrow in scope, with most directed toward one facility, and all focused on the provision of power to a specific geographical area.²¹ For example, Emergency Orders issued in 2002 and 2003 were specifically directed toward the Cross-Sound Cable connecting Connecticut to Long Island.²² An Emergency Order issued in 2005—in response to “massive destruction” by Hurricane Rita—authorized CenterPoint Energy to temporarily connect electricity lines to restore power to Entergy Gulf States, Inc.

The few orders that reached beyond one or two facilities were still narrowly tailored. For example, arguably the broadest use of emergency order authority by the Department was in response to the massive and unprecedented California energy crisis in 2000-2001.²³ Secretaries Richardson and Abraham issued a short series of Emergency Orders on approximately a weekly basis, requiring specific facilities to “generate, deliver, interchange, and transmit electricity” when requested by the California ISO. These Orders generally expired within approximately two weeks, and the entire series of Orders spanned less than two months.

As to the PJM territory, the Department has issued emergency orders for only two facilities: a 2005 Emergency Order (and follow-up orders) related to Mirant Corporation’s Potomac River

Secretary Perry re FES’s Request for Emergency Relief under Section 202 of the Federal Power Act at fn. 1 (Mar. 30, 2018).

²¹ See *DOE’s Use of Federal Power Act Emergency Authority*, Department of Energy, available at <https://www.energy.gov/oe/services/electricity-policy-coordination-and-implementation/other-regulatory-efforts/does-use> (last visited Apr. 3, 2018). Assistant DOE Secretary has stated that DOE “would never use” emergency orders for uneconomic plants. See article by Gavin Bede, *Utility Dive* (Feb. 20, 2018). Available at <https://www.utilitydive.com/news/doe-would-never-use-emergency-order-for-uneconomic-plants-walker-says-1/517455/> (last accessed Apr. 5, 2018).

²² In August 2002, responding to concerns about the availability of electricity on Long Island, an Emergency Order was issued directing Cross-Sound Cable Company to operate the Cross-Sound Cable from Connecticut to Long Island and related facilities. In August 2003, DOE required Cross-Sound Cable Company to operate its facilities in response to the blackout under the direction of the New York Independent System Operator and ISO New England.

²³ See *California December 2000*, Department of Energy, available at <https://www.energy.gov/oe/downloads/federal-power-act-section-202c-california-december-2000> (last accessed Apr. 5, 2018).

Generating Station and a 2017 Emergency Order (and follow-up orders) related to Dominion Energy Virginia's Yorktown Units 1 and 2.²⁴ In contrast to the FES Request, both of these Emergency Orders were (1) targeted to a specific city or geographical area, (2) designed to be temporary until new transmission could be put in service, and (3) issued to maintain specific generation units where closing of the units was recent or imminent.

In 2005, Mirant Corporation ceased generation at its coal-fired Potomac River station due to air quality concerns raised by the Virginia Department of Environmental Quality.²⁵ The day of the closure, the District of Columbia Public Service Commission ("DCPSC") requested that the Department find that a Section 202(c) emergency existed. DCPSC's petition to the Secretary stated that the plant's shutdown would "have a drastic and potentially immediate effect on the electric reliability in the greater Washington, D.C. area."²⁶

The Department reviewed DCPSC's petition and considered comments, issuing Emergency Order 202-05-3 approximately four months after receiving the petition.²⁷ The Department recognized the Potomac River plant was one of only three sources of electricity serving the Washington, D.C. central business district. The Department concluded that to maintain a "minimally reliable electric power system, the plant must be available to run" when one of the other two sources of power (two 230 kV transmission lines) was out of service. The Department found an emergency existed based on a combination of factors, including "the reasonable

²⁴ *DOE's Use of Federal Power Act Emergency Authority*, Department of Energy, available at <https://www.energy.gov/oe/services/electricity-policy-coordination-and-implementation/other-regulatory-efforts/does-use> (last visited April 4, 2018).

²⁵ Emergency Petition and Complaint of the District of Columbia Public Service Commission, DOE Docket No. EO-05-01, FERC Docket No. EL05-145-000 (Aug. 24, 2005) at 1, available at https://www.energy.gov/sites/prod/files/oeprod/DocumentsandMedia/mirant_082405.pdf.

²⁶ *Id.* at 1-2.

²⁷ DOE Order No. 202-05-3 (Dec. 20, 2005), available at https://www.energy.gov/sites/prod/files/oeprod/DocumentsandMedia/mirant_122005_2.pdf.

possibility an outage will occur that would cause a blackout, the number and importance of facilities and operations in our Nation's Capital . . . the extended number of hours of any blackout . . . and the fact that the current situation violates applicable reliability standards.” The original Order 202-05-3 expired in October 2006 but was renewed periodically until the final Order was issued in January 2007, expiring that summer.²⁸

Unlike FES's present Request, the Emergency Order for the Potomac River plant was targeted and focused. The concerns were immediate because the Nation's capital would have had only two sources of power. Further, it was a temporary measure until additional sources of power became available to Washington, D.C.

In June 2017, with Dominion Energy Virginia's support, PJM requested an Emergency Order from the Department requiring Dominion Energy Virginia to operate its coal-fired Yorktown Units 1 and 2 at the Yorktown Power Station, which had been slated for closure due to violations of environmental standards.²⁹ PJM asked that the Order require the units to operate “only as needed in order to address NERC reliability issues and other local transmission issues.”³⁰ The purpose of the request was “to preserve the reliability of [the] bulk power transmission system in the North Hampton Roads [Virginia] area.”³¹ PJM articulated an immediate need for an order to prevent uncontrolled power disruptions and shedding of critical loads during the peak summer

²⁸ See DOE Order No. 207-07-2, Docket No. EO-05-01 (Jan. 31, 2007), available at <https://www.energy.gov/sites/prod/files/oeprod/DocumentsandMedia/EO-05-01.pdf>; DOE Order No. 202-07-3, Docket No. EO-05-01 (Jul. 2, 2007) (indicating Order No. 207-07-2 expired on July 1, 2007), available at https://www.energy.gov/sites/prod/files/oeprod/DocumentsandMedia/DOE_Order_202-07-3.pdf.

²⁹ Dominion Energy Virginia had notified PJM of its intention to deactivate the Yorktown units as of the end of 2014, prompted by the Environmental Protection Agency's Mercury and Air Toxics Standards requirements. See PJM Request for Emergency Order Pursuant to Section 202(c) of the Federal Power Act (Jun. 13, 2017) at 5, available at <https://www.energy.gov/sites/prod/files/2017/07/f35/PUBLIC-DOE%20FPA%20202%28c%29%20Emergency%20Application%20Dominion%20Yorktown%201%20%202%20-6-13...0.pdf>.

³⁰ *Id.* at 15.

³¹ *Id.* at 1.

months which were quickly approaching. PJM had ordered expanded transmission capacity to the North Hampton Roads area, but Yorktown Units 1 and 2 were needed in the interim; PJM also suggested the transmission expansion would require outages, which could, in turn, require the Yorktown Units 1 and 2 to operate. The Department issued Emergency Order 202-17-2 on June 16, 2017. Orders have been reissued approximately every 90 days to maintain Yorktown Units 1 and 2.³²

Unlike the FES Request, the Yorktown Emergency Order was narrowly tailored to a specific and imminent reliability need. PJM stated that its request was “in no way . . . intended as a substitute for the need for transmission infrastructure on the Virginia Peninsula,” but needed only until adequate transmission infrastructure could be placed into service and only for the two Yorktown units.³³

In short, the Department has never exercised Section 202(c) authority in response to a perceived crisis that was several years away and has never exercised Section 202(c) authority anywhere close to the degree requested by FES. Instead, the Department has carefully used Section 202(c) authority to address present-time shortfalls in electricity supply through narrowly tailored solutions. Because FES fails to tailor and limit its request to specific shortfalls in electric supply at specific geographical locations, the Request should be rejected.

2. The Request seeks to vest the Department with ratemaking authority that properly resides with the Federal Energy Regulatory Commission.

³² *Id.* at 6.

³³ Summary of PJM Interconnection LLC’s Request For Emergency Order Pursuant to Federal Power Act Section 202(c) (Jun. 13, 2017), available at <https://www.energy.gov/sites/prod/files/2017/07/f35/DOE%20Dominin%20Yorktown%20FPA%20Section%20202%20Petition%20Summary%20Final%206-13-17%20.pdf>.

Title IV of the DOE Act provides for the creation of the Commission as an “independent regulatory commission.”³⁴ Under Section 402 of the DOE Act, the Commission is vested with the authority to enforce Part II of the Federal Power Act. The Commission’s jurisdiction is exclusive.³⁵ Section 401(f) provides that the Commission is authorized to establish such procedural and administrative rules as are necessary to exercise its functions. Additionally, Section 403(c) provides that “[a]ny function described in section 402 of this Act which relates to the establishment of rates and charges under the Federal Power Act...may be conducted by rulemaking procedures.”³⁶

Although the Secretary has the authority to issue an Emergency Order where an urgent need necessitates it, that authority does *not* include dictating rates, as FES asks the Secretary to do here. The DOE Act explicitly states, “[t]he decision of the Commission involving any function within its jurisdiction...*shall not* be subject to further review by the Secretary.”³⁷ Despite this provision, FES asks the Secretary, if affected parties cannot negotiate new contractual terms in 15 days, to “step in and *determine* the just and reasonable compensation and conditions.”³⁸

This request contravenes the Department’s own regulations. 10 C.F.R. § 205.376 states that if parties affected by an Emergency Order are unable to reach an agreement as to rates, the Department “shall refer the rate issues to the Federal Energy Regulatory Commission.” Consequently, this Request asks DOE to impermissibly override its own regulations (which have the force of law and are subject to notice-and-comment rulemaking procedures). Because FES

³⁴ 42 U.S.C. § 7171(a). As an independent regulatory commission, “the members, employees, or other personnel of the Commission shall not be responsible to or subject to the supervision or direction of any officer, employee, or agent of any other part of the Department [of Energy].” 42 U.S.C. § 7171(d).

³⁵ 42 U.S.C. § 7172(g).

³⁶ 42 U.S.C. § 7173(c).

³⁷ 42 U.S.C. § 7172(g) (emphasis added).

³⁸ Request at 32 (emphasis added).

requests no new connections to provide electric service, it effectively is asking for an Emergency Order on rates alone. However, the Department explicitly cannot grant FES's request that it directly set "just and reasonable rates." That jurisdiction lies with FERC, not the Department. Further, FERC has already exercised its authority to set "just and reasonable rates" and has rejected proposals similar to FES's Request. In Docket No. RM18-1-000, the Commission held that establishing cost-of-service rates for "all eligible resources . . . regardless of need or cost to the system" had not been demonstrated to be just and reasonable.³⁹ If FES believes FERC errs in its determination of just and reasonable rates in any particular rate proceeding, it may appeal to the D.C. Circuit—not the Secretary of Energy.

3. The Request seeks relief that does not constitute "just and reasonable" compensation under the Federal Power Act.

The wholesale compensation mechanisms of the Regional Transmission Organizations ("RTOs") and Independent System Operators ("ISOs") that would be affected by the Request are established through FERC-approved tariffs that the Commission must find are just and reasonable.⁴⁰ To alter those tariffs, the Commission—not the Department—must find that the current tariffs are not just and reasonable before it may determine a just and reasonable replacement rate.⁴¹ Under Section 206 of the Federal Power Act ("FPA"), the burden of proof to show that any rate, charge, classification, rule, regulation, practice, or contract is unjust, unreasonable, unduly discriminatory, or preferential is on the proponent of the new rate.⁴² It is not enough to claim that the rates are unreasonable because unit owners may be required to close

³⁹ Grid Resilience in Regional Transmission Organizations and Independent System Operators, 162 FERC ¶ 61,012 at P 16 (Jan. 8, 2018).

⁴⁰ 16 U.S.C. § 824d.

⁴¹ 16 U.S.C. § 824e.

⁴² 16 U.S.C. § 824e(b); *FirstEnergy Serv. Corp. v. FERC*, 758 F.3d 346, 354 (D.C. Cir. 2014).

uneconomic generation units. Providing economic signals to unit owners is the very point of market-based compensation and the just and reasonable market rules that are in place to determine market-based compensation.⁴³ Accordingly, the potential closing of generation units does not demonstrate that rates that have been found to be just and reasonable have suddenly become unjust and unreasonable.

FES's Request complains that the market-based rates in PJM do not generate sufficient revenue (while failing to mention both the billions of dollars utilities received for stranded costs during state restructuring processes and the high prices and high profits these same units commanded in the mid-2000s). For example, customers in Pennsylvania,⁴⁴ New Jersey,⁴⁵ and Ohio⁴⁶ paid billions in stranded costs. FES proposes new "just and reasonable" rates but has never

⁴³ See Murray Energy Comments at 19, FERC Docket RM18-1-000 ("While other issues—including increasing environmental burdens for coal and rising operating costs for nuclear—were contributing factors, the core issue boils down to economics. If wholesale prices were higher, for example, it would be profitable for a coal plant to install new emission scrubbers and the magnitude of coal and nuclear retirements would be significantly lower.").

⁴⁴ In Pennsylvania, customers paid the Pennsylvania jurisdictional utilities approximately \$12.3 billion in stranded costs. Stranded cost determinations were not changed in Pennsylvania when energy market prices were, in actuality, much higher than projected in the stranded cost proceedings. As such, generation owners, many of which were affiliates of the jurisdictional utilities, realized the upside benefit of higher LMPs while customers continued to make stranded cost payments. See *Application of Metropolitan Edison Company for Approval of its Restructuring Plan Under Section 2806 of the Public Utility Code, et al.*; *Application of Pennsylvania Electric Company for Approval of its Restructuring Plan Under Section 2806 of the Public Utility Code, et al.*, Docket Nos. R-00974008, et al., and R-00974009, et al., Final Opinion and Order (Oct. 20, 1998); *Pennsylvania Public Utility Commission v. Pennsylvania Power Company (Application for Approval of A Restructuring Plan Under Section 2806 of the Public Utility Code)*, Docket No. R-00974149, Final Order (May 3, 1999) (adopting Tentative Order entered Apr. 1, 1999); *Application of PECO Energy Company for Approval of its Restructuring Plan Under Section 2806 of the Public Utility Code, et al.*, Docket Nos. ⁴⁵ In New Jersey, customers paid approximately \$2.94 billion for net-of-tax stranded costs. *In re Public Service Elec. and Gas Company's Rate Unbundling, Stranded Costs and Restructuring Filings*, 330 N.J. Super. 65, 116 (App. Div. 2000), *affirmed* 167 N.J. 377, 771 A.2d 1163 (2001); see also *Murphy v. Public Serv. Elec. & Gas Co.*, 2009 N.J. Super. Unpub. LEXIS 309 (App. Div. 2009).

⁴⁶ Like other states, Ohio provided for stranded cost recovery and authorized approximately \$8.4 billion in electric transition plans. See Docket Nos. 99-1729-EL-ETP, Opinion and Order at 11 (9/28/00), <http://dis.puc.state.oh.us/ViewImage.aspx?CMID=WQWKCC2QHW8Q0Q92>; 99-1658-EL-ETP, Opinion and Order at 23 (8/31/00), available at: [http://dis.puc.state.oh.us/ViewImage.aspx?CMID=ROHRQ\\$ZFW2EZ9YSU](http://dis.puc.state.oh.us/ViewImage.aspx?CMID=ROHRQ$ZFW2EZ9YSU); 99-1687-EL-ETP, Testimony of Ralph Luciani at Exhibit RLL-6 (12/20/99), available at: [http://dis.puc.state.oh.us/ViewImage.aspx?CMID=LL8IYWPXY9KXIB\\$@](http://dis.puc.state.oh.us/ViewImage.aspx?CMID=LL8IYWPXY9KXIB$@); PUCO Case No. 99-1212-EL-ETP, Opinion and Order at 31 (7/19/00), available at: [http://dis.puc.state.oh.us/ViewImage.aspx?CMID=SK29QJKYOP1\\$BUO\\$](http://dis.puc.state.oh.us/ViewImage.aspx?CMID=SK29QJKYOP1BUO); Supplemental Testimony of Waggoner at HLW-1S, 2S, 3S (4/4/00), available at:

demonstrated that the existing rates—*rates approved by the Commission*—are unjust and unreasonable. In effect, FES equates the poor economics of its units with unreasonable rates.⁴⁷ A guarantee of positive annual revenue in a competitive market, however, is not required by the United States Constitution or the Federal Power Act.⁴⁸

4. The Request ignores decades of precedent by seeking cost-based rates that seek to reverse the owner's write-down of the asset value.

Throughout the Request, FES asks the Department to order PJM to enter cost-based contracts with many generation assets, overturning FERC decisions granting market-based rate authority to generation assets such as those of FES. In essence, FES is proposing to “have its cake and eat it too.” FES is requesting that PJM customers be forced to pay cost-based rates for power from nuclear and coal facilities through “full recovery of [the generator’s] fully allocated costs and a fair return on equity.”⁴⁹

In making this request, FES is prodding the Secretary to take dramatic steps in contravention of FERC policy set forth in Order No. 697, overriding FERC’s authority and

<http://dis.puc.state.oh.us/ViewImage.aspx?CMID=SLQYV6XHZZIUF95R>. FirstEnergy’s stranded cost total authorized in its electric transition plan was approximately \$6.41 billion (\$5.25 billion for out-of-market generation and \$1.16 billion for regulatory assets). PUCO Case No. 99-1212-EL-ETP, Opinion and Order at 31 (7/19/00), available at: [http://dis.puc.state.oh.us/ViewImage.aspx?CMID=SK29QJKYOPISBUO\\$](http://dis.puc.state.oh.us/ViewImage.aspx?CMID=SK29QJKYOPISBUO$); Supplemental Testimony of Waggoner at HLW-1S, 2S, 3S (4/4/00), available at: <http://dis.puc.state.oh.us/ViewImage.aspx?CMID=SLQYV6XHZZIUF95R>.

⁴⁷ See, e.g., Exelon Comments at 9, FERC Docket No. RM18-1-000. There is also a substantial inconsistency in the claims the parties are making as to the failures inherent in the market-based approaches of the RTOs and ISOs. For example, the Nuclear Energy Institute complains about the effect of short term prices while simultaneously pointing out that other social goals are embedded in retail and wholesale pricing. NEI Comments at 3-4, FERC Docket No. RM18-1-000.

⁴⁸ *Market Street Railway Co. v. California Railroad Comm'n*, 323 U.S. 548 (1945); *FPC v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944) (regulation under the parallel provisions of the Natural Gas Act does not ensure that the business will produce net revenue).

⁴⁹ Request at 31. Specifically, FES asks that the Emergency Order apply to unregulated “nuclear and coal-fired generators located within the PJM footprint” that are compliant with environmental laws and possess certain levels of on-site fuel storage. *Id.*

imposing non-market prices on uneconomic assets. FES's assertion that these actions would result in "just and reasonable rates" ignores decades of FERC precedent.

FES's Request does not stop with a request for cost-based compensation; it also asks that recent impairments/write-downs, taken by FES and other asset owners consistent with accounting standards, be ignored in cost-of-service calculations. In Footnote 172 of the Request, FES states that "the traditional cost-of-service model needs to be modified" to be additionally favorable to FES and other generators. FES contends:

Certain nuclear and coal-fired units have, for financial reporting purposes, impaired the generating asset values based on the expectation that market revenues would not be sufficient to provide a return of and on invested capital. The fact that these assets were impaired for financial reporting purposes does not change the amount that was invested in the plant nor does it relieve their owners from their obligations to bondholders. *As a result, the traditional cost-of-service model needs to be modified* to allow cost recovery based on pre-impairment asset values or it needs to be modified to allow a return on equity on the post-impairment asset value with an additional allowance for recovery of maturing debt in addition to interest expense.⁵⁰

Even in situations where nuclear and coal-fired units have taken impairments—writing off the value of the asset—FES requests *full* cost-based recovery, *even on the value of the write-down*. Put simply, FES wants the Department to (1) magically restore, in contravention of FERC precedent, the full value of its assets; and (2) dictate that customers pay for FES shareholders to earn a "fair return on equity" of this full value. FES provides no support for this aspect of its Request.

On the merits, this Request should fail for many of the same reasons FERC rejected the proposed rulemaking in its Grid Reliability and Resilience Pricing rulemaking proceeding at Docket No. RM18-1-000. It is fundamentally unfair to require customers to fund FES and other generators' "double dip"—benefitting from "original" asset value even after impairing the assets.

⁵⁰ Request at 31-32, fn. 172 (emphasis added).

FES has failed to demonstrate that its chosen units are actually needed to serve load and has failed to explain whether its proposed compensation should be net of market revenues. Further, its proposed solution, implemented by an emergency order, would neglect the cost controls imposed by proper cost-based ratemaking.

Energy customers in the PJM Region have already shouldered the costs of paying the asset owners at least once through regulated rates (return of, and on, capital investment), again through stranded cost recovery in several states, and once more when high natural gas prices in the mid-2000s drove energy market prices to higher levels. Now that these same energy customers are beginning to realize some benefit from Locational Marginal Pricing (“LMP”) occasioned by drops in natural gas prices, FES asks for an Order declaring an “emergency” and providing unprecedented and unlawful relief. The hyperbole and language of “crisis” used by FES reflects a desperate attempt by FES to prop up certain failing assets and deliver to its shareholders an investment return to which they are not entitled. The Request seeks relief that is impermissible; the Request should be denied.

C. FES Has Not Substantively Demonstrated that an Emergency Exists.

An emergency is “an unexpected inadequate supply of electric energy which may result from the unexpected outage or breakdown of facilities for the generation, transmission or distribution of electric power.”⁵¹ Emergencies are caused by: (1) weather conditions, (2) acts of God, (3) unforeseen, unpreventable circumstances, (4) sudden increase in customer demand, (5) inability to obtain adequate amounts of the fuels necessary to generate electricity, or (6) regulatory action prohibiting certain power supply facilities.⁵² FES has failed to demonstrate “a specific

⁵¹ 10 C.F.R. § 205.371.

⁵² 10 C.F.R. § 205.371.

inadequate power supply situation” caused by any of those scenarios.⁵³ Economic circumstances resulting from a changing generation resource landscape do not constitute a sudden emergency requiring immediate action. In response to FES’s Request, PJM stated: “without reservation there is no immediate threat to system reliability.”⁵⁴

1. PJM is not facing premature retirements of coal and nuclear generating facilities; rather, units are retiring due to correct economic signals.

In the Request, FES argues that FERC and PJM are allowing premature retirements of coal and nuclear generating facilities and argue immediate action is necessary to avert a crisis. Despite FES’s claims to the contrary, capacity reserve margins are ample in the PJM Region. Retirement decisions have been based upon fundamental economics, involving many generation facilities that have reached the end of their normal lives. These retirements cannot be accurately characterized as *premature*.⁵⁵ Nuclear units that have retired have done so based upon multiple factors, including equipment repairs that became unfeasible. Further, the minimal use of Reliability Must Run (“RMR”) agreements demonstrates that the organized market regions are by no means facing the loss of critical generation facilities.

a. Ample capacity reserve margins in PJM demonstrate that retirements have not been premature.

In PJM, the most recent BRA for capacity, for the 2020/2021 Delivery Year, cleared reserves of 23.3 percent—or 6.7 percentage points higher than the targeted minimum required reserve level of 16.6 percent.⁵⁶ The fact that 165,109.2 megawatts (“MW”) of unforced capacity

⁵³ 10 C.F.R. § 205.371.

⁵⁴ PJM Letter to Secretary Perry re FES’s Request for Emergency Relief under Section 202 of the Federal Power Act at 1 (Mar. 30, 2018).

⁵⁵ See Request at 12.

⁵⁶ See 2020-2021 BRA Results, available at <https://www.pjm.com/~media/markets-ops/rpm/rpm-auction-info/2020-2021-base-residual-auction-report.ashx> (last accessed Apr. 5, 2018).

producing reserves of 23.3 percent in PJM cleared in the BRA does not even tell the whole story.⁵⁷ The amount of capacity in PJM greatly exceeds the amount of cleared resources, with a total of 189,917.8 MW of capacity offered into the 2020/2021 BRA. Resources that were eligible to participate in the auction exceeded this amount, and totaled 212,995.6 MW.⁵⁸ By any measure, PJM does not face a capacity shortfall.

Interconnection queues for new generation facilities are also quite robust. For example, based upon a recent report, there are over 60,000 MW of new generation resources in various stages of PJM's interconnection queue.⁵⁹ The fact that most of this new generation is planned as renewable or gas-fired resources simply reflects the current economics of constructing new generation facilities. Clearly, recent attempts to construct new coal-fired and nuclear facilities have not proved to be great success stories.⁶⁰ Under these circumstances, and given continued and projected low natural gas prices, it logically follows that interconnection queues are dominated by renewable and gas-fired generation facilities. While not all planned generation facilities in the queue will ultimately be placed in service, many of them will be. This reality is not reflected anywhere in the FES Request.

Clearly, there is no current or imminent shortage of generation resources that warrants any action, much less the type of action contemplated in the Request. The fact that some existing coal-

See also Mississippi Public Service Commission, *Mississippi Power Company to Suspend Lignite Coal Gasification at Kemper Co. Power Plant* (June 28, 2017), available at <http://www.psc.state.ms.us/mpsc/press%20releases/2017/Mississippi%20Power%20Company%20to%20Suspend%20Lignite%20Coal%20Gasification%20at%20Kemper%20Co.%20Power%20Plant.pdf>.

fired and nuclear generating facilities have recently retired, or plan in the near future to retire, is simply a function of market economics.⁶¹

b. Many coal-fired generation facilities have reached the end of their remaining useful life, triggering retirement.

Nationwide, the coal units that were retired in 2015 were mainly built between 1950 and 1970, and the average age of those retired units was 54 years. The rest of the coal fleet that continues to operate is relatively younger, with an average age of 38 years.⁶² The coal units retired in 2015 also tended to be smaller than the rest of the coal fleet. The net summer capacity of the average retired coal unit was 133 MW, compared with 278 MW for the average coal units still operating.⁶³ Coal plants in these vintages have a typical design life of between 30 to 40 years.⁶⁴ Thus, the coal-fired power plants that have recently retired are beyond their design life,⁶⁵ and their smaller size makes them generally less economic to run. This reality is not reflected in the FES Request.

c. Nuclear plant retirements have been driven by economics, local politics, and equipment failures.

FES argues that PJM does not value resiliency and therefore does not appropriately compensate resources like nuclear and coal. An examination of recent nuclear plant retirements

⁶¹ Given the current market disincentives, this process makes intuitive sense. With lower wholesale prices of electricity due to falling natural gas prices and increasing low marginal cost renewables, coal and nuclear plants make less money and become increasingly financially distressed. Eventually, dismal revenue projections and falling profits lead to a management decision to shed unprofitable assets. While other issues—including increasing environmental burdens for coal and rising operating costs for nuclear—were contributing factors, *the core issue boils down to economics*. If wholesale electricity prices were higher, for example, it would be profitable for a coal plant to install new emission scrubbers and the magnitude of coal and nuclear retirements would be lower. Murray Energy Comments at 19 (emphasis added).

⁶² See EIA Mar. 8, 2016 *Electric Generator Inventory*.

⁶³ *Id.*

⁶⁴ See American Public Power Association, *Michigan's Lansing BWL to close coal-fired power plant by end of 2025* (Aug. 25, 2017), available at <https://www.publicpower.org/periodical/article/michigans-lansing-bwl-close-coal-fired-power-plant-end-2025> (last accessed Apr. 4, 2018).

⁶⁵ See Power, *America's Aging Generation Fleet* (Jan. 28, 2013), available at <http://www.powermag.com/americas-aging-generation-fleet/?printmode=1> (last accessed Apr. 4, 2018).

nationwide supports the conclusion that the retirements have been driven by economics and equipment failures that proved too costly to repair, or resulted from negotiations with state or local officials who were concerned over continued operation of the facilities.⁶⁶

In the PJM territory, Exelon Corporation agreed to cease electric generation operations at the Oyster Creek Generating Station by December 31, 2019. The agreement was part of a negotiated settlement with the State of New Jersey intended to ensure that water withdrawals from Barnegat Bay for cooling purposes and discharges from the plant did not damage the ecological health of the Bay.⁶⁷

⁶⁶ This trend is not isolated to PJM. In January of 2017, Entergy announced that it had reached an agreement with the State of New York to shut down the Indian Point nuclear station by 2021 rather than continuing to fight legal battles over renewal of licenses. See Entergy, *Entergy, NY Officials Agree on Indian Point Closure in 2020-2021* (Jan. 9, 2017), available at <http://www.entergynewsroom.com/latest-news/entergy-ny-officials-agree-indian-point-closure-2020-2021/> (last accessed Apr. 4, 2018). Entergy also cited economic factors as contributing to the decision to shut down the facility. Dominion Energy elected to close the Kewaunee Power Station in Wisconsin in 2013 after failing to find a buyer. See USA Today, *Kewaunee County ready to move on after nuclear plant closing* (July 12, 2017), available at <https://www.usatoday.com/story/news/investigations/2017/07/12/kewaunee-nuclear-plant-closing/103598506/> (last accessed Apr. 4, 2018). Dominion said the decision was based purely upon economics, as the plant lacked economies of scale and falling natural gas prices had lowered wholesale power prices. Owners of the San Onofre nuclear power plant made the decision to close the facility in 2013, after a project to replace steam generators went poorly. See The Orange County Register, *San Onofre nuclear plant to shut permanently, Edison says* (June 8, 2013), available at <http://www.ocregister.com/2013/06/08/san-onofre-nuclear-plant-to-shut-permanently-edison-says/> (last accessed Apr. 4, 2018). Duke Energy announced in 2013 that it would close the Crystal River nuclear facility in Florida after construction workers cracked the wall of the containment building during a project to replace steam generators. See Tampa Bay Times, *Duke Energy announces closing of Crystal River nuclear power plant* (updated Feb. 11, 2014), available at <http://www.tampabay.com/news/business/energy/duke-energy-announces-closing-of-crystal-river-nuclear-power-plant/1273794> (last accessed Apr. 4, 2018). Pacific Gas & Electric Co. announced in June 2016 that it would shut down its Diablo Canyon nuclear reactors when their operating licenses expire in 2024 and 2025. However, the decision to shut down the reactors was the result of a negotiated settlement with environmental organizations. See Los Angeles Times, *PG&E to close Diablo Canyon, California's last nuclear power plant* (June 21, 2016), available at <http://www.latimes.com/business/la-fi-diablo-canyon-nuclear-20160621-snap-story.html> (last accessed Apr. 4, 2018). Vermont Yankee Nuclear Power Station closed in December 2014. Entergy's decision to shut down the facility resulted from negotiations with state officials who objected to continued operation of the facility. See State of Vermont Public Service Department, *Brief History of Vermont Nuclear Power* (2017), available at <http://publicservice.vermont.gov/content/nuclear-decommissioning-citizens-advisory-panel-ndcap/history>. Entergy announced in December 2016 that it planned to close the Palisades nuclear generating facility in Michigan on October 1, 2018. On September 28, 2017, Entergy announced it was reversing its decision and would operate the facility at least until the spring of 2022. See Entergy, *Entergy to Continue Operating Palisades Power Plant Until Spring 2022* (Sept. 28, 2017), available at <http://www.palisadespower.com/entergy-to-continue-operating-palisades-power-plant-until-spring-2022/> (last accessed Apr. 4, 2018).

⁶⁷ See State of New Jersey Department of Environmental Protection, *Comprehensive Plan of Action Item #1 Close Oyster Creek Nuclear Power Plant* (last updated June 16, 2016), available at <http://www.nj.gov/dep/barnegatbay/plan-oystercreek.htm>.

These decisions to operate or close existing reactors illustrate that nuclear plant retirements are not being driven by RTO power market rules and, thus, the relief being sought by FES would have no impact on those closures. In some cases, local politics and equipment failures have led to decisions to retire or to continue to operate nuclear generating facilities. In fact, three of these closures (Kewaunee, San Onofre, and Crystal River) are not even located in regions of the country that would be subject to the Emergency Order. Thus, the claim that “PJM has done little to prevent this emergency,” or that RTO market rules are driving *premature* nuclear plant retirements does not withstand scrutiny.⁶⁸

d. The use of RMR agreements has been infrequent.

The RMR process provides PJM with the ability to keep essential assets online if, and only to the extent that, a reliability problem exists. PJM does use this process on occasion when needed. However, PJM has used the process infrequently, further confirming that generation needed for reliability or “resilience” is not retiring and certainly not retiring prematurely.⁶⁹

The nation is not facing *premature* retirements of coal and nuclear generating facilities; rather, these generating units are retiring due to correct economic signals or for reasons completely unrelated to PJM market rules. Not only is there no emergency, but PJM’s process is working by facilitating the exit of uneconomic and inefficient old generation and facilitating the entry of economic and efficient new generation. It would be inappropriate for the Secretary to issue an Emergency Order that would fundamentally disrupt the entry and exit signals that are currently being provided by the PJM market.

⁶⁸ See Request at 1.

⁶⁹ American Manufacturers Comments at 34-39.

2. The recent Bomb Cyclone weather events and resulting NETL Report do not justify FES's request for DOE to prop up uneconomic coal and nuclear units in PJM.

In its Request, FES relies heavily on a recently released a DOE-sponsored National Energy Technology Laboratory report (“NETL Report”).⁷⁰ The NETL Report states that some coal-fired generating units were a prominent example of “resilience in action” in PJM during the “Bomb Cyclone” winter weather events in late December 2017 to early January 2018.⁷¹ However, the NETL Report’s conclusion about the resiliency of existing coal units in PJM is based on a limited comparison between the increase in coal generation during the Bomb Cyclone and the level of generation from December 1 through 26, 2017 from other resources.⁷² Importantly, the NETL Report includes an upfront disclaimer indicating that it only represents “the views and opinions of authors” that “do not necessarily state or reflect the those of the United States Government or any agency thereof.”⁷³

Despite FES’s claims, the NETL Report does not show that “immediate action” by DOE is necessary to prop up uneconomic coal and nuclear units.⁷⁴ Prior to the Bomb Cyclone, many coal generation units were idle or only partially utilized because they were uneconomic and too costly to operate. The increase in coal generation during the Bomb Cyclone shows only that those coal generators are uncompetitive unless electricity and gas prices increase significantly.⁷⁵ Instead of measuring resilience in PJM, the NETL Report “simply finds which energy sources are the most

⁷⁰ See Request at 4-9 (citing National Energy Technology Laboratory, Reliability, Resilience, and the Coming Wave of Retiring Baseload Units Volume I: The Critical Role of Thermal Units During Extreme Weather Events (Mar. 13, 2018) (“NETL Report”), available at <https://www.netl.doe.gov/research/energy-analysis/search-publications/vuedetails?id=2594>).

⁷¹ NETL Report at 12.

⁷² See NETL Report at 12.

⁷³ See NETL Report, Disclaimer page.

⁷⁴ See Sierra Club Comments at 12-15 (submitted Mar. 30, 2018 to the DOE in response to FES’s Request).

⁷⁵ Sierra Club Comments at 13.

expensive.”⁷⁶ Thus, FES’s reliance on the NETL Report’s cursory assessment that many coal units in PJM are expensive fails to support FES’s claim that those units are critically needed to meet demand or ensure resiliency or reliability.

Essentially, the NETL Report provides an assessment of the present supply curve in PJM and highlights that as load increases, RTOs move up the supply stack and increasingly commit higher cost, lower efficiency units.⁷⁷ The NETL Report appears to misconstrue typical generation operation of coming on-line when market forces are such that the price being paid for electricity is greater than the cost for the unit to produce electricity as somehow equating that to a herculean effort at providing grid resilience. Such an assessment ignores the fact that in most cases, the generation coming on-line is receiving a capacity market payment collected from consumers to provide standby service and be ready to provide output when demand or prices are high. While it is admirable that units residing in the portion of the supply stack were called on and operated as obligated, it is no less important to recognize that there likely remained higher priced units in the supply stack that were not required to operate during the Bomb Cyclone but none-the-less also received a capacity payment for the standby service that was provided.

Reliance on an assessment of resilience simply based on a cursory review of increased generation output overlooks other data points that qualify the increased output. As PJM noted, combined, 28% of its coal and oil units with on-site fuel inventories reported issues with fuel

⁷⁶ Sierra Club Comments at 13 (citing Michael Goggin, Fossil Lab Misses Mark in Cold Weather “Resilience” Report, (Mar. 28, 2018), available at <http://sustainableferc.org/fossil-lab-misses-mark-in-cold-weather-resilience-report/>.)

⁷⁷ See NETL Report at 12-18.

resupply due to fuel transportation constraints from a contribution from coal plants, with coal units most frequently reporting delays due to frozen rivers and increased barge traffic.⁷⁸

Additionally, as it relates to PJM, the NETL Report seems to value the inability of coal plants to cycle during lower priced overnight hours or lower load days of the Bomb Cyclone and equates this inflexibility to increase resilience contribution. NETL correctly identified cycling of natural gas units during the Bomb Cyclone but failed to acknowledge that the flexibility afforded by units that can cycle over holidays, lower load weekend periods, and overnight hours is a desirable characteristic that results in more efficient power market operations.⁷⁹ In fact, based on the average daily generation output metric that is used in NETL to purportedly assess plant performance and resilience contribution value, this metric is likely skewed significantly due to desired cycling of the natural gas and oil units, and its value as a meaningful metric is questionable.

As explained in Sierra Club's comments in response to FES's Request, PJM is and has been effectively ensuring system reliability and resilience during a time of shifting energy and generation resources.⁸⁰ During the Bomb Cyclone, PJM explained that "the grid and the generation fleet performed well" and that "[e]ven during peak demand, PJM had excess reserves and capacity."⁸¹ The NETL Report does not demonstrate that, after the retirement of certain coal

⁷⁸ PJM Interconnection, PJM Cold Snap Performance Dec. 28, 2017 to Jan. 7, 2018 (Feb. 26, 2018) at 16, available at <http://www.pjm.com/-/media/library/reports-notice/weather-related/20180226-january-2018-cold-weather-event-report.ashx>.

⁷⁹ See NETL Report at 15 ("wide swings in hourly output of up to 4 GW imply that increment was met by cycling natural gas combined cycle units").

⁸⁰ See Sierra Club Comments at 15.

⁸¹ Sierra Club Comments at 15 (citing PJM Interconnection, PJM Cold Snap Performance Dec. 28, 2017 to Jan. 7, 2018 (Feb. 26, 2018), available at <http://www.pjm.com/-/media/library/reports-notice/weather-related/20180226-january-2018-cold-weather-event-report.ashx>).

units, PJM will be unable to procure sufficient generation capacity to meet its reserve margin requirement from new or existing resources.

Importantly, the NETL Report does not measure resiliency and does not constitute a formal and thorough determination on resiliency. A full-scale measure and evaluation of resiliency and the range of threats to the bulk power system is occurring in the FERC Grid Resilience proceeding.⁸²

3. The Polar Vortex does not justify FES's request for DOE to prop up uneconomic coal and nuclear units in PJM.

a. PJM has already adopted changes in response to the 2014 Polar Vortex.

FES argues that the 2014 Polar Vortex (and associated cold weather spikes) justifies its request for DOE emergency action to ensure the continued operation of certain existing nuclear and coal generation facilities.⁸³ PJM has already initiated and adopted changes in response to the 2014 Polar Vortex. Thus, FES fails to reconcile its Request for an Emergency Order with the many market rule changes and generation performance enhancements that have already been implemented and have demonstrated improved system performance.⁸⁴ Instead, PJM invokes the Polar Vortex simply to argue for prolonged operations of certain coal and nuclear units because electric supply from nuclear and coal-fired generators is critical during cold weather events.

b. The 2014 Polar Vortex demonstrates that lessons learned have been successful.

The two regions most directly impacted by the 2014 Polar Vortex have already undertaken detailed reviews and have implemented market rule changes to forestall a repeat performance of

⁸² See Grid Resilience in Regional Transmission Organizations and Independent System Operators, Docket Nos. AD18-7-000; see R-18-07

⁸³ Request at 5, 9, 17.

⁸⁴ See Sierra Club Comments at 10-12 (arguing that the Polar Vortex does not justify FES's request for DOE to prop up uneconomic coal and nuclear units in PJM).

the operational issues that challenged grid performance in 2014.⁸⁵ PJM has implemented numerous changes to its market rules that include its Capacity Performance construct and changing the timing of its day-ahead scheduling deadlines to provide gas-fired generators a better ability to submit timely pipeline nominations.⁸⁶ ISO New England has also implemented market rule changes that include its forward capacity market pay-for-performance rules.⁸⁷ Even regions not directly stressed by the 2014 Polar Vortex have used it as a “lessons learned” experience and have taken steps to improve market functionality. For example, New York ISO has initiated changes to its shortage pricing rules and improved operational monitoring on fuel availability.⁸⁸ MISO has implemented over 20 specific steps to reduce risks associated with grid operation during extreme weather events.⁸⁹

Even though not all of the market rule changes have been implemented, the changes implemented prior to the winter of 2015 have already demonstrated a marked improvement in system performance. The winter of 2015 was remarkably similar to weather in 2014 as described by PJM:

The winter of 2015 was marked by cold temperatures similar to the winter of 2014 – with the coldest temperatures experienced during February 2015 throughout the

⁸⁵ The 2014 Polar Vortex and earlier severe winter weather conditions did, however, highlight operational issues that contributed to the forced outages and poor performance, and compelled examination of the underlying causes and remedies. The regions most affected—PJM and ISO-NE—undertook detailed reviews to rectify those issues. PJM and ISO-NE each found that most, if not all, of the operational issues could be addressed if generation suppliers made investments in weatherization or increased operating budgets and commitments for future fuel deliveries. Both regions proposed (and the Commission generally accepted) market solutions that: (1) pay generation resources for better performance and allow recovery of investment in operational reliability of the resource, including forward fuel costs; and (2) impose a strong monetary penalty for poor performance—with limited to no exceptions. Comments of the ISO/RTO Council at 21, *Grid Reliability and Resilience Pricing*, Docket No. RM18-1-000 (Oct. 23, 2017) (“ISO/RTO Council Comments”).

⁸⁷ Comments of ISO New England Inc. at 11, *Grid Reliability and Resilience Pricing*, Docket No. RM18-1-000 (Oct. 23, 2017).

⁸⁸ Comments of the New York Independent System Operator, Inc., Attachment at 5, *Grid Reliability and Resilience Pricing*, Docket No. RM18-1-000 (Oct. 23, 2017).

⁸⁹ MISO Comments, Attachment A at 20, *Grid Reliability and Resilience Pricing*, Docket No. RM18-1-000.

entire PJM footprint. Numerous cities across PJM hit their daily low-temperature records during February 2015. Due to the low temperatures and associated high electricity demand for heating needs, PJM set a new wintertime peak demand record of 143,086 megawatts the morning of Feb. 20 (hour ending 0800). The new peak record surpassed the previous all-time winter peak of 142,863 MW set Jan. 7, 2014. Some of the individual transmission zones within the PJM footprint also set all-time record winter peaks.

In addition to the extremely cold temperatures, PJM also reviewed effective temperatures or wind chill data, for select cities throughout the footprint for both 2014 and 2015. This analysis indicated January 2014 actually felt colder just about everywhere when compared to 2015, especially in Columbus, Cleveland and Chicago, where effective temperatures were between 14 and 16 degrees warmer in 2015. The significant wind chill experienced during 2014 could have contributed to the higher amount of generator forced outages encountered in 2014. By comparison, the less severe warmer effective temperature, wind chill, in 2015 may have contributed to improved generator performance.⁹⁰

PJM reported improved system performance in 2015 notwithstanding the fact that certain market rule changes, such as its Capacity Performance rules, had not been implemented:

Generator performance in February 2015 showed improvement, with forced outage rates better than in January 2014. For the morning of Feb. 20, 2015, when PJM reached a new all-time winter peak, the forced outage rate was 13.4 percent, representing 24,805 MW of generation forced out of service. Although the 2015 winter peak forced outage rates represent an improvement over the 22 percent forced outage rate during the Jan. 7, 2014, peak, the 2015 rates were still above historical “normal” winter peak outage rate of between 7 and 10 percent. The performance improvements of winter 2015 over 2014 are attributed to steps PJM and generation owners initiated after the winter of 2014 experience: pre-winter operational testing for dual-fuel and infrequently run units, a winter-preparation checklist program, better communication of fuel status and increased coordination with natural gas pipelines.

A total of 168 units (9,919 MW) participated in the pre-winter operational testing. Units that participated in the pre-winter operational testing had a lower rate of forced outages compared to those that did not test.⁹¹

⁹⁰ PJM Interconnection, L.L.C., *2015 Winter Report* at 5 (May 13, 2015), available at <http://www.pjm.com/-/media/library/reports-notice/weather-related/20150513-2015-winter-report.ashx?la=en>.

⁹¹ *Id.* at 5-6.

Other RTOs/ISOs have also reported improved operational performance due to market rule changes that were implemented following the 2014 Polar Vortex.⁹² Given the improved system performances resulting from the successful implementation of lessons learned from the 2014 Polar Vortex, FES fails to explain why reliance on cold weather occurrences during the 2014 Polar Vortex now provides an evidentiary basis for out-of-market subsidies to prolong the continued operation of certain coal-fired and nuclear generating facilities.

4. The bankruptcy filing by FES, subsequent to its Request to DOE, undermines FES's claims of "emergency."

On March 29, 2018, FES filed the instant Emergency Order Request with DOE. In FES's request, FES explained that it would likely file for bankruptcy at the end of March 2018.⁹³ On March 31, 2018—a mere two days after its Emergency Order Request—FES filed for bankruptcy in the U.S. Bankruptcy Court for the Northern District of Ohio.⁹⁴ FES's bankruptcy filing and the convenient foreshadowing of such bankruptcy two days earlier in the Emergency Order Request was a strategic business decision—not the result of an unforeseen and uncontrollable emergency. Thus, the planned bankruptcy filing by FES right after FES's Request to DOE undermines any and all claims of "emergency" by FES in the DOE request. Furthermore, the bankruptcy filing in fact solidifies and affirms FES's abuse of Section 202(c) of the Federal Power Act by engaging the DOE (and requiring the expenditure of resources by numerous stakeholders in the hours and days after FES's Emergency Order Request). The DOE should outright reject FES's request. It is not PJM's nor PJM's stakeholders' responsibility to help mitigate, resolve, or ameliorate FES's business and financial decisions that eventually gave way to FES's bankruptcy filing.

⁹² ISO/RTO Council Comments at 21-22, *Grid Reliability and Resilience Pricing*, Docket No. RM18-1-000.

⁹³ Request at 8, 20, fn. 121.

⁹⁴ See http://www.cleveland.com/business/index.ssf/2018/03/firstenergy_solutions_bankrupt.html.

5. On-site fuel supply is not a significant contribution to reliability and resilience.

FES argues that nuclear and coal-fired units are “the backbone of the electric system” because they are designed to run “24/7” with 25 days of on-site fuel availability. However, the assumption that a significant on-site fuel supply contributes to grid reliability and resilience is contradicted by factual history. Comments submitted by The Rhodium Group, LLC (“Rhodium”) to the grid resiliency rulemaking in RM18-1-000 support this conclusion. Relying upon data submitted to the EIA on Form OE-417 reports since the beginning of 2012, Rhodium found that:

[b]etween 2012 and 2016, utilities reported roughly 3.4 billion customer-hours impacted by major electricity disruptions. 96% of those lost service hours were due to severe weather (Figure 2). Fuel emergencies or deficiencies at power plants resulted in 2,382 customer hours of lost service or 0.00007% of the total. 2,333 of those customer hours were due to one event in Northern Minnesota in 2014 involving a coal-fired power plant.⁹⁵

Rhodium determined that the vast majority of customer outages were the result of damaged distribution facilities.⁹⁶ Thus, on-site fuel supply contributes little, if anything, to actual reliability and resilience. Further, the relatively short duration of most disruptive events undermines FES’s argument that 25 days of on-site fuel availability will ensure reliability and resilience.

D. If Reliability Concerns Were to Arise, PJM Has in Place Adequate Processes For Addressing Those Concerns.

PJM’s generation deactivation process adequately evaluates all generation retirements for an adverse impact on reliability. In its Open Access Transmission Tariff and in PJM Manual 14D, PJM describes a detailed process that must follow when a generation retirement is announced. After such an announcement, a timetable begins in which PJM initiates an analysis and explores

⁹⁵ Rhodium Comments at 3, *Grid Reliability and Resilience Pricing*, Docket No. RM18-1-000 (Oct. 23, 2017) (emphasis added).

⁹⁶ *Id.* at 2.

transmission solutions to enable power to continue to reliably flow to customers.⁹⁷ Generator retirements are also included in PJM's Regional Transmission Expansion Planning ("RTEP") process. PJM utilizes criteria to identify potential transmission system problems due to specific retiring. PJM may order transmission upgrades to keep the grid reliable in response to generator retirements.

PJM has in place Tariff provisions that provide adequate compensation for units that determined to be RMR units. Attachment K Appendix Section 6 is entitled "Must-Run For Reliability Generation" and addresses PJM's RMR process. The RMR process provides PJM with the ability to keep essential assets online. The RMR process is described in greater detail in Section 9.2 of PJM Manual 14D.

Under PJM Manual 14D, PJM may request a generating unit to operate past its desired deactivation date. Upon this notice, the generator may file with FERC for full cost recovery; alternatively, the generator owner may elect to receive avoidable cost compensation as per Part V of the PJM Tariff.⁹⁸

PJM has used the RMR process infrequently, indicating that generation needed for reliability or "resilience" is not retiring and certainly not retiring prematurely.⁹⁹ However, these processes provide PJM the tools to make it economic to keep generators online when necessary for grid reliability. This process, and PJM's careful management of the grid, negate the need for an Emergency Order by the Department.

⁹⁷ See PJM Manual 14D: Generator Operational Requirements § 9.1. See also <http://learn.pjm.com/three-priorities/planning-for-the-future/explaining-power-plant-retirements.aspx>.

⁹⁸ PJM Manual 14D § 9.2.

⁹⁹ American Manufacturers Comments at 34-39, Docket No. RM18-1-000.

E. If Granted, the Request Would Unnecessarily Raise Energy Prices For Consumers and Directly Undercut the Tremendous Economic Advantage to the United States from Natural Gas Shale Plays.

FES's Request to DOE seeks to impose enormous unnecessary energy costs on the American public. The advent of low priced natural gas specifically, and energy prices generally, has been, and continues to be, a monumental opportunity for the nation's energy consumers. Low natural gas prices and the resulting low energy prices in LMP-based markets provide a tremendous economic advantage to energy-intensive businesses. These businesses contribute in meaningful and tangible ways to the communities in which they are located. The natural gas Shale Plays have spearheaded a "Manufacturing Renaissance" in the United States. Requiring customers, including energy-intensive businesses, to subsidize (apparently indefinitely) large amounts of uneconomic generation sources would directly undercut this opportunity for economic growth and impede the ability of market forces to naturally select successful generation resources.

The economic benefits of shale gas production are real and tangible. The lower price of natural gas translates into lower priced electricity. As stated in *The Economist*, "In principle, all American companies and consumers benefit from lower energy prices. The effect may not always be big enough to spur heavy new investment, but it might be sufficient to keep American factories with high labor costs going in the face of foreign competition."¹⁰⁰ Economists at Citigroup and UBS predict that shale gas will lift America's Gross Domestic Product ("GDP") growth by half a percentage point a year.¹⁰¹ Indeed, less expensive energy is cited as one factor by those who have predicted a manufacturing renaissance in America.¹⁰²

¹⁰⁰ *The Economist*, *Deep sigh of relief* (Mar. 16, 2013), available at <https://www.economist.com/news/special-report/21573279-shale-gas-and-oil-bonanza-transforming-americas-energy-outlook-and-boosting-its> (last accessed Apr. 3, 2018).

¹⁰¹ *Id.*

¹⁰² *Id.*

Natural gas markets have been found to be less integrated compared to markets for other fossil fuels. As such, U.S. natural gas prices have fallen sharply and are effectively decoupled from those in the rest of the world. This offers the United States a concrete competitive advantage. If energy-intensive customers are required to subsidize uneconomic coal and nuclear generators that the RTOs have already found to be unnecessary for reliable operations, the competitive cost advantage that the Shale Plays have brought will be undercut. Simply put, the tax on businesses produced by FES's Emergency Order—if it were to be approved—would increase energy costs and would make those regions that must pay the new tax less attractive for businesses to locate or expand their operations.

Other studies have linked American natural gas development with strengthening the U.S. economy and making domestic manufacturing more competitive.¹⁰³ A report from the University of Michigan found that more than 200 mostly U.S.-based companies have participated in “onshoring” during the prior four years, motivated in part by the availability of less expensive natural gas.¹⁰⁴ Researchers at the London School of Economics found the estimated effect of the shale gas boon on gross output, employment, and capital investment within energy-intensive sectors is “positive throughout and significant.”¹⁰⁵ Their research showed that the “shale gas boom” led to a “relative expansion of energy intensive manufacturing in the U.S.”¹⁰⁶ Similarly, the researchers found that U.S. manufacturing exports grew “by about 10 percent on account of

¹⁰³ See HIS CERA, *Fueling the Future with Natural Gas: Bringing It Home* (Jan. 2014), available at <http://marcelluscoalition.org/wp-content/uploads/2014/01/Fueling-the-Future-Executive-Summary-14Jan2014.pdf> (last accessed Apr. 3, 2018).

¹⁰⁴ University of Michigan, *Shale Gas: A Game-Changer For U.S. Manufacturing* at 14 (July 2014), available at <http://energy.umich.edu/sites/default/files/PDF%20Shale%20Gas%20FINAL%20web%20version.pdf>. (last accessed Apr. 3, 2018).

¹⁰⁵ Centre for Economic Performance, *On the Comparative Advantage of U.S. Manufacturing: Evidence from the Shale Gas Revolution* at 24 (Nov. 2016), available at <http://cep.lse.ac.uk/pubs/download/dp1454.pdf> (last accessed Apr. 3, 2018).

¹⁰⁶ *Id.* at 32.

their energy intensity since the onset of the shale revolution.”¹⁰⁷ In short, the study found that the “price differential between the U.S. compared to Asia and Europe is thus likely to persist in turn helping to lift U.S. manufacturing.”¹⁰⁸ Granting FES’s Request could potentially affect the existing price differential and, thus, undercut U.S. manufacturing.

Many view the United States as currently in the midst of an energy revolution. With such rapid fundamental changes afoot, it is reasonable to expect “winners” and “losers.” Low natural gas prices may have an adverse impact on certain market participants, such as certain inefficient legacy coal units and single-unit nuclear plants. As a general matter, however, the shale gas revolution should be viewed as an opportunity to establish a competitive advantage as the vast majority of our nation’s economy that has benefited from lower energy prices. FES’s Request seeks an outcome that would undeniably increase both near-term and long-term energy costs for all customers, particularly energy-intensive businesses, while providing unprecedented financial security and subsidies to a discreet and limited class of market participants that own inefficient legacy units. Such a result cannot be viewed as sound public policy or as capable of producing just and reasonable rates, free from the Federal Power Act’s requirement that rates shall not be unduly discriminatory or preferential. In fact, such an approach threatens the economic outlook for all businesses that evaluate energy costs as a component of whether to site, maintain, or expand businesses in a particular region.

¹⁰⁷ *Id.*

¹⁰⁸ *Id.* at 33.

F. FES's Argument that Energy Price Formation in PJM Does Not Adequately Compensate Baseload Resources is Invalid and Inappropriate in an Emergency Order Request; FES's Argument on Price Formation is More Appropriately Presented and Examined in the Ongoing PJM Stakeholder Process.

In its request, FES argues there is an urgent need for reforming energy market rules surrounding price formation in order to more appropriately compensate baseload resources like coal and nuclear facilities.¹⁰⁹ Through its Request, FES seeks to undermine competitive markets and the series of the Commission's orders seeking and promulgating open access and competitive wholesale energy markets. FES's argument on energy price formation is more appropriately presented and examined in the ongoing PJM stakeholder process instead of in an emergency order request.

1. Resilience is already a critical part of reliability assessments.

In comments to the Grid Resilience proceeding in AD18-7-000/RM18-1-00, PJM explained that it already considers resilience factors because many resilience actions are "anchored in...the existing reliability standards."¹¹⁰ Resilience is a critical part of reliability assessments; however, resilience is not a wholly distinct and separate concept. FES has not demonstrated that DOE or the Commission should carve out resilience and treat it as a discrete characteristic of wholesale electricity markets. Resilience is embedded within independent reliability standards that are promulgated and enforced by the North American Electric Reliability Council ("NERC"), the not-for-profit electric reliability organization that develops and enforces reliability standards and is subject to FERC's oversight. NERC is well-positioned to provide intelligence, knowledge,

¹⁰⁹ Request at 8, 14, 16, 19, 27.

¹¹⁰ PJM Comments, Docket No. AD18-7-000 at 4 (filed Mar. 9, 2018).

metrics, and threat analyses to apply to resilience vulnerability and high-impact, low-frequency events that test grid resilience.¹¹¹

PJM has explained that the PJM Bulk Electric System is safe and reliable today because it has been designed and operated to meet all applicable reliability standards.¹¹² Therefore, the grid operator in PJM, tasked with ensuring reliability, does not contend there are safety and reliability issues in the PJM footprint. PJM, a non-profit service company, is better positioned to evaluate reliability issues and emergencies surrounding certain uneconomic generating units than FES. In a March 30, 2018 letter response to FES's Request, PJM again affirmed: "PJM can state without reservation there is no immediate threat to system reliability."¹¹³

2. FES has not demonstrated a dearth of capacity in PJM.

Not only has FES failed to demonstrate a lack of capacity in PJM, but PJM has indicated that the opposite is the case.¹¹⁴ PJM's study, *PJM's Evolving Resource Mix and System Reliability*, released in 2017, stated that "[t]he expected near-term resource portfolio is among the highest-performing portfolios and is well equipped to provide the generator reliability attributes" based on the requirements of the PJM Open Access Transmission Tariff, the PJM Operating Agreement, the PJM Reliability Assurance Agreement, and applicable NERC reliability standards.¹¹⁵ Even as the potential future resource mix moves in the direction of less coal and nuclear generation, the PJM Evolving Resource Mix Study found generator reliability attributes of frequency response,

¹¹¹ See, e.g., NERC's State of Reliability 2017 Report (June 2017), available at https://www.nerc.com/pa/RAPA/PA/Performance%20Analysis%20DL/SOR_2017_MASTER_20170613.pdf.

¹¹² PJM Comments, Docket No. AD18-7-000 at 4 (filed Mar. 9, 2018).

¹¹⁴ See American Manufacturers' Comments at 31-32 and n. 67.

¹¹⁵ PJM Interconnection, L.L.C., *PJM's Evolving Resource Mix and System Reliability*, at 4 (Mar. 30, 2017) (internal footnote omitted) ("*PJM Evolving Resource Mix Study*"), available at <http://www.pjm.com/~media/library/reports-notices/special-reports/20170330-pjms-evolving-resource-mix-and-system-reliability.ashx>.

reactive capability, and fuel assurance may decrease while flexibility and ramping attributes increase.¹¹⁶ To be clear, PJM's study identified areas of future attention, but the study did not suggest a reliability problem of such a magnitude that it needed to be addressed imminently.

3. Energy prices are currently reflecting lower fuel prices.

A fundamental characteristic of PJM's LMP is that it drives short-term market outcomes toward pricing for all energy on the basis of the cost of the marginal unit, which is the least efficient unit, the unit with the most expensive fuel source, or both. In 2008-2009, when natural gas prices were high, customers shouldered the burden with respect to higher energy prices. During that time of record high LMPs, customers raised repeated concern, if not objection, that LMP drove short-term market outcomes toward pricing for all energy on the basis of high-priced natural gas.¹¹⁷ The response then to customer concerns was effectively that "the market was the market," with high prices being only a function of gas prices and nothing can or should be done to ameliorate high LMPs. With the shale gas revolution and abundant natural gas and low fuel prices, LMPs have reached historic lows.

In PJM, the Independent Market Monitor has recognized that LMPs are low but that LMPs are not too low.¹¹⁸ PJM energy prices track closely with fuel prices and indicate an efficiently functioning market.¹¹⁹ Energy markets and capacity markets work together to allow resources an opportunity to recover their costs. In a time of low energy prices, it should not be surprising that the capacity market needs to do more "heavy lifting" to support ISO/RTO resource adequacy and reliability imperatives and return the "missing money" that was often cited as the initial need for

¹¹⁶ *PJM Evolving Resource Mix Study* at 5.

¹¹⁷ *Id.* at 15 ("The majority of short run marginal costs for power production are fuel costs.").

¹¹⁸ Testimony of Joseph Bowring Before the House Committee on Energy & Commerce, Subcommittee on Energy, State of Electricity Markets at 4 (Oct. 5, 2017), *available at* <http://docs.house.gov/meetings/IF/IF03/20171005/106470/HHRG-115-IF03-Wstate-BowringJ-20171005-U3.pdf>.

¹¹⁹ IMM Comments at 15, Docket No. RM18-1-000.

capacity markets. Even with low energy prices, the PJM Independent Market Monitor has found that at least 50 percent of all nuclear units recovered avoidable costs from all markets, including the capacity markets.¹²⁰ Based on the twelve months ending June 2017, at least 75 percent of all nuclear units recovered avoidable costs from all markets.

It also warrants noting that several other initiatives have been implemented recently that may have impacts on LMP in PJM, such as the Capacity Performance requirements, increasing the PJM energy offer price cap, allowing the triggering of transient shortages, and adding new steps to the operating reserve demand curve for shortage pricing. These changes should be given an opportunity to address any perceived concerns that may still linger. For example, on September 21, 2017, as reserve margins reduced and began to approach reserve requirements, PJM real-time LMP and reserve prices rose significantly due to the recently implemented changes to the shortage pricing operating reserve demand curves. On this day, between 2:00 p.m. and 5:00 p.m., more than half of the pricing for this period was impacted by a market change that triggers shortage pricing as reserves *approach* a reserve requirement rather than trigger shortage pricing only after reserve requirements have been violated.¹²¹ This change to shortage pricing was implemented on July 12, 2017.

4. Confidence in markets is tested when changes to energy market price formation can be viewed as a thinly veiled effort to provide price support for certain classes of resources.

Confidence in markets is tested when changes to energy market price formation can be viewed as a thinly veiled effort to provide price support for certain classes of resources or certain market participants. Industrials advocated for restructuring over twenty years ago to allow the

¹²⁰ *Id.* at 18.

¹²¹ See PJM Interconnection, L.L.C., *Real-time Market Results* at 6 (Sept. 21, 2017), available at <http://www.pjm.com/-/media/committees-groups/committees/oc/20171010/20171010-item-19-real-time-market-results.ashx>.

market to discipline such market entry and exit; it is a fine line between adjusting market rules and engineering preferred pricing outcomes. Coal-fired units with an average age of 49 years old comprise the majority of capacity that is at risk of retirement.¹²² It is reasonable to query how long these assets should reasonably be expected to be operational. Without substantial evidence of reliability problems with the current time-tested approach to energy price formation, FES's Request can reasonably be viewed as a reckless attempt to engineer preferred pricing outcomes to support certain legacy units.

Low natural gas prices may have an adverse impact on certain PJM market participants but, as a general matter, the shale gas revolution should be viewed as a remarkably beneficial opportunity for this region to establish a competitive advantage for businesses. If the market was not allowed to develop during the first decade of the 2000s during a time of high natural gas prices, the shale gas revolution, shale finds, and associated technologies (all leading to today's lower natural gas prices) may not have robustly developed. Unilaterally modifying energy price formation to benefit certain legacy units will increase, to some unknown degree, costs to customers, including businesses that evaluate energy costs as a component of whether to site or expand business in a particular region. Low energy prices send a signal that resources may be uneconomic and should retire—that is an efficient market result. Choosing certain higher cost generation technologies and not letting the market function could chill future investments in alternative energy technology and other resources.

5. Unit inflexibility should not be used as an excuse to inflate energy prices.

To the extent price formation is an issue that warrants attention, many fundamental issues must be considered before the bedrock of PJM's energy markets is upset. FES's characterization

¹²² IMM Comments at 19-20, Docket No. RM18-1-000.

of the facts in its Request implies that certain inflexible resources are being required to operate at a loss. That is simply not the case. Inflexible coal or nuclear units serving load may operate at a loss during a particular hour, but PJM makes a unit that is dispatched whole over an entire day period; losses in some hours are netted with profits in other hours.

In a nutshell, if the generation units were flexible, the units would be backed down or shut down when they became uneconomic to run. An approach that allows these inflexible resources to set prices does not comport with economic logic or the fundamentals of LMP. Simply put, inflexible units may operate and serve load, but, if the inflexible units were to retire, other presumably flexible units would replace them. Such is the reality of using markets to discipline market entry and exit.

6. Adoption of changes to energy pricing rules would severely disrupt contracting for retail supply.

Given the heavily regulated nature of PJM's energy market, a common feature of industry-standard agreements for wholesale transactions and for service to retail customers is a "change in law" provision or "regulatory change" clause.¹²³ Such provisions authorize suppliers to pass along additional costs caused by a change in law or regulatory change to their customers currently under contract. As the Department considers FES's call to override the fundamentals of LMP in PJM, the Department should be cognizant of the ripple effects of such an action on contracts across the industry, including potentially default service agreements and retail agreements.

While ISO/RTO markets across the country have experienced numerous rule changes, the LMP price-setting fundamentals in PJM have been virtually unchanged. Where LMP mechanics have changed in other markets, such changes have occurred after significant stakeholder processes

¹²³ See Energy Research Council, *Are fixed-price electricity supply contracts really fixed?* (2013), available at <http://energyresearchcouncil.com/Are-fixed-price-electricity-supply-contracts-really-fixed.html> ("Many supplier contracts have "pass-through" or "change-in-law" provisions, which can affect a customer's electricity bill.") (website sponsored by, among others, Constellation, an affiliate of Exelon).

that included market simulations that previewed the resulting pricing under the new regime.¹²⁴ This provided ample time for operational analysis to be performed and market participants to understand the implications of the change.

Such a significant change as FES proposes, especially without appropriate time to understand the potential market implications, adds to uncertainty and may lead some market participants to re-open existing contracts using the industry-standard “change in law” or “regulatory change” provisions.

In this context, some suppliers may argue that the higher prices produced by the change in law or regulatory change are costs that should be shifted to their counterparties. For retail energy contracts and default service agreements, quantifying the impact of a change in law or regulatory change of this magnitude and complexity would be speculative and costly. Customers would have little information or leverage to dispute the amount of additional costs their suppliers will require them to pay to avoid default.

This Request should not become a vehicle to short-circuit price formation changes. Certainly, the record does not support a finding that existing price formation is unjust and unreasonable. The Federal Power Act requires more evidentiary support before significant costs are put upon customers to the benefit of the owners of nuclear and coal-fired generation.¹²⁵

¹²⁴ . For example, MISO began its discussions of extended LMP, which PJM referenced in its Comments, in at least 2010, if not before. MISO submitted proposed tariff revisions to implement extended LMP (Initial ELMP Filing) in December 22, 2011, in Docket No. ER12-668-000, which were conditionally approved on July 20, 2012. Extended LMP was not implemented until March 1, 2015. A status report was filed in ER12-668 on August 29, 2016.

¹²⁵ *Id.* at 35.

G. FES Seeks to Undermine the Commission's Recent Order Rejecting the Grid Resiliency Pricing Proposal and the Ongoing FERC Grid Resilience Proceeding and Stakeholder Processes.

1. FES failed to request rehearing of the Commission's January 8 Order rejecting the Grid Resiliency Pricing proposal.

On January 8, 2018, the Commission terminated the proposed resiliency rule focused on providing out-of-market compensation to generators with on-site fuel capability and instead instituted a proceeding in AD18-700 seeking comments and responses on resilience to enable the Commission to holistically examine the resilience of the bulk power system.¹²⁶ In that Order, the Commission rejected the same types of arguments and rationale that FES advances in its Emergency Order Request. FES failed to seek reconsideration of the Commission's January 8 Order rejecting the Grid Resiliency Pricing proposal. Now, FES seeks to advance the same types of arguments and rationale that the Commission has already rejected. DOE must reject FES's forum-shopping and abuse of process and agency resources. FES had the opportunity to ask for reconsideration it seeks now before DOE, but declined to request rehearing at FERC on its January 8 Order rejecting the Grid Resiliency Pricing proposal. Now, without any reference to changed circumstances, FES seeks to re-litigate the same issues at DOE. In doing so, FES provides little evidentiary support of its own and fails to confront the large body of record evidence amassed at FERC in RM18-1-000 from industry, experts, RTOs and ISOs, states, and other stakeholders demonstrating that the relief FES requests is unnecessary and unrelated to reliability or resilience and would result in unjust, unreasonable, and unduly discriminatory or preferential rates.

¹²⁶ Grid Resilience in Regional Transmission Organizations and Independent System Operators, 162 FERC ¶ 61,012 (Jan. 8, 2018).

2. The Commission's Resilience Docket and PJM's ongoing stakeholder processes are more appropriate forums to address FES's concerns.

The Commission is currently evaluating grid resilience issues in RTOs/ISOs and potential recommendations and reforms.¹²⁷ FES complains that the Commission's ongoing docket on resilience is "too little, too late."¹²⁸ However, FERC's ongoing proceeding is precisely the forum to thoroughly address and evaluate—free from a hyperbolic expression of emergency¹²⁹—the complex and multi-layered legal and technical issues surrounding resilience. FERC is also the more appropriate forum to address the longer-term generation resource issues regarding FES's concerns that a substantial portion of the generation fleet will be retiring over a number of years. Although FERC found no urgent threat to the grid's reliability to justify the extraordinary action proposed again now, it did initiate an administrative proceeding to better define and understand resilience and determine whether additional steps are needed to ensure resilience. FirstEnergy attempts to side-step and undermine that proceeding with its Emergency Order Request to DOE.

3. FES's Emergency Order Request proceeding should not be used to short-circuit or circumvent any stakeholder and FERC processes that are currently investigating and evaluating price formation changes.

FES's Request seeks to short-circuit or circumvent any stakeholder process that is underway to consider any need for price formation changes. Price formation issues require lengthy stakeholder discussion and debate. For example, MISO stakeholders considered Extended LMP

¹²⁷ See Grid Resilience in Regional Transmission Organizations and Independent System Operators, 162 FERC ¶ 61,012 (2018) (terminating DOE's proposed rule focused on providing out-of-market compensation to generators with on-site fuel capability and instituting proceeding in AD18-700 seeking comments and responses on resilience to enable the Commission to holistically examine the resilience of the bulk power system).

¹²⁸ Request at 10.

¹²⁹ See Request at 33 ("The time for talk is over. We find ourselves at a crisis point...").

for at least five years before it was implemented in March 2015.¹³⁰ Furthermore, FERC will continue to investigate energy price formation as it impacts resiliency and baseload generation.¹³¹

PJM had issued its Whitepaper on Energy Price Formation on June 15, 2017.¹³² PJM proposed enhancements to energy price formation on November 15, 2017.¹³³ On December 21, 2017, the Commission instituted a Federal Power Act Section 206 paper proceeding to investigate PJM's practices regarding the prices of fast-start resources.¹³⁴ In the PJM stakeholder process, the Energy Price Formation Senior Task Force is evaluating proposals to enhance energy market pricing to ensure "prices accurately reflect the true incremental cost of serving load and minimize the need to recover those costs through out-of-market uplift payments."¹³⁵ The task force recently posted an updated Issue Charge¹³⁶ and Problem Statement.¹³⁷

The PJM stakeholder process on energy price formation issues is ongoing and underway. PJM should be allowed to complete a meaningful stakeholder process "to explore ideas, to discuss options, and to allow all PJM stakeholders an opportunity to represent their interests."¹³⁸ In

¹³⁸ IMM Comments, RM18-1-00, at 35.

addition to the options identified by PJM in its Price Formation Whitepaper, other options for addressing measurable and verifiable reliability or resilience concerns exist. The Commission must provide adequate latitude and discretion to the stakeholder process to allow all reasonable options to be considered, including those options offered in the Independent Market Monitor's Comments in the grid resilience docket.¹³⁹

FES has failed to provide any evidentiary foundation supporting a finding that existing price formation is unjust and unreasonable. The Federal Power Act requires more stakeholder vetting and evaluation before significant costs are put upon customers to the benefit of the owners of nuclear and coal-fired generation.

H. FES's Clearing of the BRA Through the 2020/2021 Delivery Year Demonstrates that FES Currently Has an Obligation, and Associated Compensation For that Obligation, to Run Its Units Through May 31, 2021.

In successfully clearing the BRA through the 2020-21 delivery year, FES willingly took on an obligation, and the associated compensation for that obligation, for that time period. FES's units are committed through that time frame. Despite making these economic decisions, FES now seeks a bailout.

It should be noted that there were many years in which nuclear and coal units generated substantial returns. At the time, industrial entities were deeply concerned about locational-marginal pricing. Meanwhile, utilities such as FirstEnergy were receiving stranded cost payments based on these low numbers.

If the Secretary were to grant FES's Request, customers would be placed in the untenable position of being responsible for the *higher* of cost- or market-based rates. When LMP prices are higher, driven by higher fuel costs, customers have been compelled to pay such market-based

¹³⁹ IMM Comments, RM18-1-00, at 42-45.

prices. Now, driven by lower cost prices, the Request would lead customers to guarantee cost recovery for certain types of generation, including legacy units, in contravention of fundamental and long-standing tenets of FERC ratemaking.¹⁴⁰ Under this approach, customers cannot reasonably view their rates to be “just and reasonable.”

Plainly stated, energy-intensive businesses and other consumers that depend on reliable and reasonably priced energy to produce products and provide services would be required to provide an apparent long-term bailout to certain market participants. Such a bailout cannot be justified on reliability grounds.¹⁴¹ The Request asks to break contracts and seeks unprecedented executive authority to impose new cost structures without due process. If such an Emergency Order were issued, the incredible progress of a market-oriented approach for electric regulation would be heedlessly damaged at the stroke of a pen.

¹⁴⁰ See *Federal Power Comm’n v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944).

II. CONCLUSION

For the reasons set forth above, the PJM Consumer Representatives respectfully request that the Department deny FES's Request for an Emergency Order.

Respectfully submitted,

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.)**

DOE Docket No. _____

**COMMENTS OF THE
NEW JERSEY BOARD OF PUBLIC UTILITIES**

Pursuant to Rule 211 of the Federal Energy Regulatory Commission's ("FERC's") Rules of Practice and Procedure,¹ 18 C.F.R. § 385.211, the New Jersey Board of Public Utilities ("NJBP") hereby protests First Energy Solutions Corp.'s ("FES") March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act ("FPA") section 202(c), 16 U.S.C. § 824a(c), pending with the Department of Energy ("Department").

COMMENTS

On September 28, 2017, the Secretary of Energy issued a letter with a Notice of Proposed Rulemaking ("Proposed Rule") for final action by the FERC.² The Proposed Rule directed the FERC to consider requiring certain Regional Transmission Organizations ("RTOs") and Independent System Operators ("ISOs") to establish a tariff mechanism providing for: (1) the purchase of energy from an eligible "reliability and resilience resource" and (2) the recovery of costs and a return on equity for such

¹ Guidance published on the Department's website points to the use of Federal Energy Regulatory Commission ("FERC") Rules where Department regulations at 10 C.F.R. § 205.370, *et. seq.*, are silent. *See, e.g.*, Department Answer to Procedural Questions Concerning Rehearing of Department Order, District of Columbia Public Service Commission, at 2 Docket No. EO-05-01 (December 30, 2005). Order No. Order No. 202-05-3.

resources (i.e., a “resilience rate”).³ For support, among other things, the Proposed Rule cited the retirements of baseload generation, particularly coal and nuclear resources, and “a growing recognition that organized markets do not compensate resources for all of the attributes they contribute to the grid, including resilience.”⁴ FERC initiated Docket No. RM18-1 for the purpose of considering and taking final action on the Proposed Rule.⁵ Numerous comments were provided from a wide variety of stakeholders, ranging from utilities, generators, federal and state legislators, state regulatory commissions, state attorneys general, industrial customers, environmental organizations, consumer advocates, mining companies, other industries and individuals.⁶

NJBPU was among the commenters in Docket No. RM18-1. In its comments, NJBPU stated its long-held position that FERC and the RTOs have a vital role in ensuring that a diverse mix of resources contributes to the reliability and resiliency of the electric power grid.⁷ During restructuring, the NJBPU cautioned that price should not be the only consideration.⁸ The NJBPU recognized that the shift to competitive markets may lower bills for ratepayers at a greater long-term impact to the State of New Jersey.⁹ NJBPU urged early action at a federal or regional level to address its concerns that the

This Final Report was presented to Governor Christie Todd Whitman and the State Legislature to inform the development of legislation that would ultimately result in restructuring the utility industry in New Jersey.

⁹ NJBPU Final Report on Restructuring at 127.

market would shift toward overreliance on certain resources.¹⁰ Where no action was taken at the federal or regional level, NJBPU preserved the right to take action at the State level to ensure the State continued to benefit from a diverse portfolio of resources.¹¹ In response to the Proposed Rule, the NJBPU supported the concept of thoughtful and reasoned federal or regional efforts, rather than hastily-implemented solutions yielding substantial uncertainty and significant cost increases for ratepayers.¹²

By Order issued January 8, 2018, the FERC terminated the rulemaking proceeding and initiated a new proceeding to specifically evaluate the resilience of the bulk power system.¹³ The FERC determined that, “[w]hile some commenters allege grid resilience or reliability issues [exist] due to potential retirements of particular resources, we find that these assertions do not demonstrate the unjustness or unreasonableness of the existing RTO/ISO tariffs. In addition, the extensive comments submitted by the RTOs/ISOs do not point to any past or planned generator retirements that may be a threat to grid resilience.”¹⁴ Nevertheless, the FERC initiated a new proceeding, Docket No. AD18-7-000, to holistically examine the resilience of the bulk power system. In doing so, the FERC recognized that “it must remain vigilant with respect to resilience

¹⁴ 162 FERC ¶ 61,012, at P 15 (internal citations omitted).

challenges, because affordable and reliable electricity is vital to the country's economic and national security.”¹⁵

The Department accepted FERC's decision. In a public statement, in response to the FERC decision, Secretary Perry stated that he “look[s] forward to continuing to work with the Commissioners to ensure the integrity of the electric grid.”¹⁶ A spokeswoman for the Department responded to the FERC decision to initiate a new proceeding with the following quote: “The Secretary is pleased that FERC heard his call and is directing the regional transmission organizations and independent system operators to take steps to continue to address these important issues.”¹⁷ Ultimately, the Department stated that it “plans to work with FERC and all other relevant stakeholders including the RTOs and ISOs as they discuss how best to address the important issue of the long term reliability and affordability of energy in this country.”¹⁸

FES also accepted FERC's decision when it did not seek rehearing of FERC's Order. However, FES now improperly advances to the Department the same types of arguments and rationale that the FERC rejected. Rehearing was the appropriate course, under the FPA, for FES to seek the relief advanced in its Emergency Request. The Emergency Request should be rejected as an inappropriate attempt at rehearing the issue beyond the statutory timeframe; re-litigation of an issue that has been addressed by the FERC and accepted by the Department.

¹⁵ News Release, “FERC Initiates New Proceeding on Grid Resilience, Terminates DOE NOPR Proceeding” (Jan. 8, 2018), *available at* <https://www.ferc.gov/media/news-releases/2018/2018-1/01-08-18.asp#.WsT66C7waUk>

¹⁷ *Id.*

¹⁸ *Id.*

Notwithstanding the Department's support for FERC's new proceeding on resiliency, FES criticizes the docket on resilience as "too little, too late."¹⁹ NJBPU respectfully disagrees. Although FERC did not find an urgent reliability threat sufficient to justify the Proposed Rule (and, by extension, the FES Emergency Request), it did initiate an administrative proceeding to better define and understand resilience and determine whether additional steps are needed to ensure resilience. FERC's ongoing proceeding is the appropriate forum to reasonably, thoughtfully, and thoroughly evaluate at a federal and regional level the many complex issues related to resiliency. The Department indicated its pleasure with this response and stated that it planned to work with FERC in this process.²⁰ FES would have the Department renege those public statements and undermine the FERC proceeding by Emergency Order. NJBPU urges the Department to continue on its chosen course and reject the FES Emergency Request.

Moreover, the Department should not countenance the FES attempt to circumvent the on-going price formation stakeholder processes. PJM should be allowed to complete a meaningful stakeholder process "to explore ideas, to discuss options, and to allow all PJM stakeholders an opportunity to represent their interests."²¹ The NJBPU supports such stakeholder vetting and evaluation before significant costs are put upon ratepayers.

The FES Request is further flawed in that it is overbroad and contrary to precedent. On this point, the NJBPU supports and shares the opinion of the PJM

¹⁹ FES Request, *supra*, at 10.

²⁰ News Release, "Department of Energy Responds to FERC Decision on Proposed Rule" (Jan. 8, 2018), *available at* <https://www.energy.gov/articles/departments-energy-responds-ferc-decision-proposed-rule>

²¹ Comments of the Independent Market Monitor for PJM, at 35, Docket No. RM18-1 (October 10, 2017).

Consumer Representatives.²² In Section B.1, the PJM Consumer Representatives explain, with examples, how the FES Emergency Request is inconsistent with the Department's prior Emergency Orders. In section B.2, the PJM Consumer Representatives explain, with ample citations to the Department's own regulations, how the FES Emergency Request improperly seeks to vest the Department with ratemaking authority. That authority properly resides with FERC. NJBPU shares and supports these concerns and urges the Department to give these concerns due consideration.

Finally, NJBPU shares the concern that the FES Emergency Request extends beyond the limited scope of Section 202(c) of the FPA. On this point, the NJBPU supports and shares the opinion of the PJM Consumer Representatives as expressed in Sections A of their Protest.²³ The Department has never exercised Section 202(c) authority where the threat is several years away. In clearing the Base Residual Auction ("BRA") through the 2020-21 delivery year, FES willingly took on an obligation – and the associated compensation for that obligation – for that time period. And, as PJM notes in its Comments, FES' units are committed through that time frame.²⁴

Ultimately, the NJBPU has long held the belief that there may be a problem with price formation such that certain positive attributes are not recognized. NJBPU first expressed concerns and sought a federal or regional solution during restructuring. NJBPU repeated those concerns in its comments in the DOE NOPR.²⁵ However, the NJBPU cautioned against a hastily-implemented solution that may cause more harm than

good.²⁶ The FES Emergency Request appears to be an effort to obtain just such a hasty, and potentially costly, solution. Thus, the NJBPU asks that the Department reject the Emergency Request and urges continued, reasoned, and thoughtful analysis of resilience concerns in the existing dockets and stakeholder forums.

CONCLUSION

NJBPU respectfully asks that the Department give full consideration of these comments.

**UNITED STATES OF AMERICA
BEFORE THE DEPARTMENT OF ENERGY**

Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.) DOE Docket No. _____

**MOTION TO INTERVENE AND PROTEST OF ENVIRONMENTAL DEFENSE FUND,
NATURAL RESOURCES DEFENSE COUNCIL, AND THE SUSTAINABLE FERC PROJECT**

Pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission's ("FERC") Rules of Practice and Procedure,¹ Environmental Defense Fund ("EDF"), Natural Resources Defense Council ("NRDC"), and Sustainable FERC Project ("SFP") move to intervene in the above-captioned matter.

I. BACKGROUND

On March 28, 2018, FirstEnergy Solutions Corp. ("FES") announced its plans to retire three nuclear generation facilities in 2020 or 2021.² The following day, FES filed a request for an emergency order with the United States Department of Energy ("DOE")³ under Section 202(c) of the Federal Power Act.⁴ FES requested that all merchant coal and nuclear generating units within PJM Interconnection ("PJM") with at least 25 days of onsite fuel be provided non-market, cost-of-service rates and guaranteed profits for at least four years (the "Profit Guarantee Request"). On March 30, 2018, EDF and NRDC filed a letter with DOE urging DOE to reject FES's Profit Guarantee Request.⁵

II. SERVICE OF DOCUMENTS

EDF, NRDC, and SFP designate the following persons to receive service and all communications on their behalf regarding this proceeding:

¹ 18 C.F.R. §§ 385.211 and 385.214.

² News Release, FirstEnergy Solutions Files Deactivation Notice for Three Competitive Nuclear Generating Plants in Ohio and Pennsylvania, PR NEWswire (Mar. 28, 2018, 17:06 ET), <https://www.prnewswire.com/news-releases/firstenergy-solutions-files-deactivation-notice-for-three-competitive-nuclear-generating-plants-in-ohio-and-pennsylvania-300621346.html>; Letter from FES to the Honorable James Richard Perry (Mar. 29, 2018), at 8, 20 (hereinafter "Profit Guarantee Request").

³ See generally Profit Guarantee Request.

⁴ 16 U.S.C. § 824a(c)(1).

⁵ Letter from EDF and NRDC to the Honorable Rick Perry, Assistant Secretary Bruce Walker, and Deputy Assistant Secretary Catherine Jereza (Mar. 30, 2018).

III. MOTION TO INTERVENE

EDF, NRDC, and SFP move to intervene in the above-captioned matter because this proceeding will directly impact the core missions of EDF, NRDC, SFP, and their members. Specifically, EDF is a national non-profit membership organization engaged in linking science, economics, and law to create innovative, equitable, and cost-effective solutions to society's most urgent environmental problems. With over 2 million members and engaged participants nationwide, including within PJM, EDF has been an active environmental and energy advocate since 1967. NRDC is a national non-profit membership organization with more than 3 million members and engaged community participants, including within PJM. NRDC is committed to the preservation and protection of the environment, public health, and natural resources. To this end, NRDC is actively involved in advancing cost-effective environmental solutions that reduce greenhouse gas emissions and other dangerous forms of air pollution and accelerate the deployment of energy efficiency and renewable energy. EDF and NRDC regularly engage on issues relating to reliability, resilience, and markets for electric energy, capacity, and ancillary services, including through proceedings before FERC, the North American Electric Reliability Corporation ("NERC"), DOE, Regional Transmission Organizations ("RTOs"), and state regulatory authorities,

among others. EDF and NRDC support electric regulatory priorities that provide robust reliability and resilience in a manner that facilitates the integration of clean energy and is affordable to customers.

SFP is an education and advocacy initiative that represents a consortium of national and regional environmental, consumer, and energy policy non-governmental organizations with members throughout the United States, including within PJM. SFP focuses on accelerating the deployment of renewable energy and demand-side resources by advocating cost-effective electric regulatory policies that remove barriers for these resources and ensure more just and reasonable rates. SFP has participated in stakeholder discussions involving resilience and reliability at FERC, DOE, and RTOs, among others.

FES's proposal would undermine the achievement of EDF's, NRDC's, and SFP's core missions. Each organization's membership would be harmed by the monetary, environmental, and public health impacts of the Profit Guarantee Request. EDF, NRDC, and SFP are not now, nor will they be, adequately represented by any other party in these proceedings. Accordingly, under Rule 214, EDF, NRDC, and SFP have a significant and direct interest in this proceeding and the interventions are in the public interest. Thus, EDF, NRDC, and SFP move to intervene under Rule 214.

IV. STATEMENT OF OPPOSITION AND PROTEST

Pursuant to Rule 214(b)(1), EDF, NRDC, and SFP strongly oppose FES's Profit Guarantee Request. The Profit Guarantee Request suffers from already examined and dismissed errors and fundamental deficiencies. Namely, the request: (1) is premised on legal flaws; (2) ignores prior and current FERC activity and finding; (3) would impose enormous cost upon American homes and businesses without benefit; and (4) would undermine the competitive marketplace. EDF and NRDC incorporate by reference the arguments made in their March 30, 2018 letter.⁶ EDF, NRDC, and SFP reserve the right to supplement this pleading to explain, in greater detail, why the Profit Guarantee Request is unlawful and should be rejected.

⁶ *Id.*

V. CONCLUSION

For the foregoing reasons, EDF, NRDC, and SFP respectfully request that DOE grant this Motion to Intervene and make EDF, NRDC, SFP parties in the above-captioned proceeding, with all rights attendant thereto, and that DOE reject FES's Profit Guarantee Request.

Respectfully submitted,

Re: Petition to Intervene of Old Dominion Electric Cooperative

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Enclosed please find the Petition to Intervene of Old Dominion Electric Cooperative in the proceeding concerning FirstEnergy Solutions Corp.'s Request for Emergency Action under Section 202(c) of the Federal Power Act.

Please contact the undersigned if you have any questions concerning this matter.

Respectfully Submitted,

Rebecca L. Shelton
Counsel for Old Dominion Electric Cooperative

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant to) DOE Docket No. ____
Federal Power Act Section 202(c) by)
FirstEnergy Solutions Corp.**

**PETITION TO INTERVENE OF
OLD DOMINION ELECTRIC COOPERATIVE**

I. INTRODUCTION

This proceeding involves a pending request by FirstEnergy Solutions Corp. (“FirstEnergy Solutions”), on behalf of its subsidiaries, under Section 202(c) of the Federal Power Act (“FPA”), 16 U.S.C. § 824a(c) (“Request”). FirstEnergy filed its Request with the Department of Energy (“DOE”) on March 29, 2018, asking that the Secretary of Energy (“Secretary”) “find that an emergency condition exists in the footprint of the PJM Interconnection, L.L.C. (“PJM”) that requires immediate intervention by the Secretary, in the form of a Section 202(c) emergency order . . .” Request at 1. FirstEnergy Solutions has asked that the Secretary direct certain existing nuclear and coal generators to enter into contracts with PJM to provide electric energy, capacity, and ancillary services that FirstEnergy Solutions alleges are “needed to maintain the stability of the electric grid,” and to require PJM to compensate the nuclear and coal units “for the full benefits they provide to energy markets and the public at large.” *Id.*

By this submittal, Old Dominion Electric Cooperative (“ODEC”) hereby petitions to intervene in this proceeding.

II. COMMUNICATIONS

Communications regarding this matter should be addressed to the following persons, who also should be designated for service on the official list for this proceeding:

Adrienne E. Clair
Rebecca L. Shelton
Thompson Coburn LLP
1909 K Street, N.W., Suite 600
Washington, D.C. 20006-1167
(202) 585-6900
(202) 585-6969 (fax)
aclair@thompsoncoburn.com
rshelton@thompsoncoburn.com

III. PETITION TO INTERVENE

ODEC is a not-for-profit power supply electric cooperative, organized and operating under the laws of Virginia and subject to the jurisdiction of the Federal Energy Regulatory Commission. ODEC is a generation-owning utility that supplies capacity and energy to its eleven electric distribution cooperative members, all of which are located within the PJM control area. ODEC is a network transmission customer of PJM, as well as a PJM Transmission Owner. As a Transmission Owner and load-serving entity in the PJM region, ODEC stands to be directly impacted by FirstEnergy Solutions' Section 202(c) request. Therefore, ODEC has a direct interest in this proceeding, and its interest cannot be adequately represented by any other entity.

IV. CONCLUSION

WHEREFORE, for the foregoing reasons, ODEC requests that the DOE grant ODEC's petition to intervene, with all rights attendant thereto.

Respectfully submitted,

/s/ Adrienne E. Clair

RE: Motion of Pennsylvania Office of Consumer Advocate

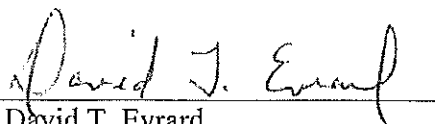

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Attached is Pennsylvania Office of Consumer Advocate's (PA OCA) Motion to Intervene in the proceeding concerning FirstEnergy Solutions Corp.'s (FES) Request For Emergency Action under Section 202(c) of the Federal Power Act. Under Pennsylvania law, PA OCA is the state agency charged with representing the interests of public utility consumers in matters before state and federal regulatory bodies.

PA OCA is also a member of PJM Interconnection LLC, which will be affected by the FES request. PA OCA opposes the FES Request for emergency action. If the Request is not denied outright, PA OCA requests that interested parties be given 60 days to file comments, as

requested by the Electric Power Supply Association and other organizations on Friday, March 30, 2018.

Respectfully submitted,

A handwritten signature in black ink, reading "David T. Evrard", written over a horizontal line.

David T. Evrard
Assistant Consumer Advocate
Pennsylvania Office of Consumer Advocate

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

Request for Emergency Order Pursuant)
To Federal Power Act Section 202(c) By)
FirstEnergy Solutions Corp.) **DOE Docket No. _____**

**MOTION OF PENNSYLVANIA OFFICE
OF CONSUMER ADVOCATE
TO INTERVENE**

The Pennsylvania Office of Consumer Advocate (PA OCA) hereby moves to intervene in the above-captioned proceeding pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, First Energy Solutions Corp. (FES) issued a letter (Request) to the Honorable James Richard Perry, Secretary of Energy, requesting that the Secretary use emergency authority under Section 202(c) of the Federal Power Act to find that an emergency condition exists in the PJM Interconnection, L.L.C. (PJM) territory requiring immediate intervention. Specifically, FES requests that the Secretary (a) order "certain existing nuclear and coal-fired generators . . . to enter into contracts" with PJM to generate and transmit energy, capacity, and ancillary services to "maintain the stability of the electric grid" and (b) order PJM to "promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide" to energy markets and the public. FES served the Request on over 100

owners of generation, transmission, or distribution assets, state public utility commissions, and others.

II. MOTION TO INTERVENE

PA OCA is the state agency charged, under Pennsylvania law, with representing the interests of public utility consumers in matters before state and federal regulatory bodies. If FES' Request is granted, cost responsibility for payments made pursuant to the Emergency Order may be recovered from consumers in Pennsylvania and throughout the PJM region. PA OCA opposes the Request.

PA OCA moves for intervention under Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure. Consistent with Rule 214(b)(2), PA OCA has a significant and direct interest in the outcome of this proceeding, and as the agency statutorily charged with representing the interests of public utility customers in Pennsylvania, PA OCA's participation is in the public interest.

III. SERVICE OF DOCUMENTS

The person to receive service and communications on behalf of PA OCA with regard to this proceeding is:

David T. Evrard
Assistant Consumer Advocate
PA Office of Consumer Advocate
555 Walnut Street, 5th Floor
Harrisburg, PA 17101-1923
Phone: (717) 783-5048
Email: devrard@paoca.org

IV. STATEMENT OF OPPOSITION

Commission Rule 214(b)(1) requires the movant to state its position on the underlying matter. PA OCA opposes the relief sought by FES. Overwhelming evidence, not cited in the

Request, demonstrates that no need exists for the requested relief and certainly no emergency exists that would justify application of Section 202(c) of the Federal Power Act. PA OCA anticipates joining with other representatives of consumer interests in submitting a comprehensive rebuttal to FES' Request.

PA OCA joins with other intervenors in respectfully requesting the Department to give all interested parties sufficient time to present their responses to the FES Request before ruling on the Request. To that end, PA OCA supports the request filed Friday, March 30, 2018, by the Electric Power Supply Association and other organizations requesting a 60-day comment period.

V. CONCLUSION

For the reasons set forth above, PA OCA respectfully requests that the Department grant PA OCA's motion to intervene in this proceeding and, if the Department does not reject the FES Request outright, provide all interested parties with 60 days to file comments on the Request.

Respectfully submitted,

/s/ David T. Evrard

Document 32

President Donald J. Trump
The White House
1600 Pennsylvania Ave, Northwest
Washington, DC 20060

Dear President Trump,

On March 29, 2018, Secretary Perry and the Department of Energy received a request for an emergency order pursuant to his authority under Section 202(c) of the Federal Power Act. It is my understanding that this request by FirstEnergy Solutions is now under consideration. I greatly appreciate Secretary Perry's efforts to secure and strengthen our electric grid and, in particular, his consideration of this request.

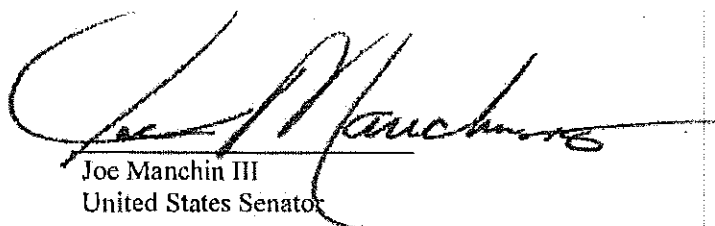

As I have discussed with you and Secretary Perry on numerous occasions, many baseload units in the PJM Interconnection (PJM) footprint continue to suffer from the cumulative effect of an onslaught of overregulation, market rules that disadvantage baseload power, and subsidies and mandates that have encouraged negative bidding into competitive markets. In combination with the naturally occurring dynamics of our energy markets, essential baseload units that provide resilience and reliability attributes to our grid are struggling to stay operational. Many of these plants are located in the Ohio Valley region, including the Pleasants Power Station in Willow Island, West Virginia.

As it has time and again, coal-fired power generation performed well during the Polar Vortex in 2014 and more recently during this year's Bomb Cyclone. These extreme weather events tested our electric grid in an unprecedented manner and coal delivered. In fact, the Department of Energy's own National Energy Technology Lab (NETL) found that, at the height of peak demand on January 5, 2018, "had coal been removed, a 9-18 GW shortfall would have developed."¹ NETL went on to conclude that, "In the case of PJM, it can also be shown that the demand could not have been met without coal."²

The impending deactivation of numerous coal and nuclear power plants is of great concern for our grid, for our communities, and for our nation. In addition to the loss of jobs and threats to the economic livelihood of the communities in which these plants sit, our region and our nation's electric grid will become less resilient if no action is taken now to keep these plants operational.

Therefore, I urge your Administration and the Department of Energy to use its statutory authority to preserve these critical units. I thank you for your consideration and am happy to make myself available to you at any time to discuss these matters.

Sincerely,

Joe Manchin III
United States Senator

John E. McCaffrey
Regulatory Counsel

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

Request for Emergency Order Pursuant)
to Federal Power Act Section 202(c) by) DOE Docket No. _____
FirstEnergy Solutions Corp.)

**MOTION TO INTERVENE AND PROTEST OF
THE AMERICAN PUBLIC POWER ASSOCIATION**

Pursuant to Rules 212, 214, and 211 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“FERC”),¹ the American Public Power Association (“APPA”) hereby moves to intervene in the above-captioned U.S. Department of Energy (“Department”) proceeding and protests the March 29, 2018 request (“Request”) of FirstEnergy Solutions Corp., on behalf of certain of its subsidiaries (collectively, “FirstEnergy”), that the Secretary of Energy (“Secretary”) issue an emergency order under section 202(c) of the Federal Power Act (“FPA”).²

APPA urges the Secretary to deny FirstEnergy’s unjustified request for an emergency order requiring PJM Interconnection, L.L.C. (“PJM”), and, by extension, the electricity consumers in the PJM region, to provide “full cost recovery” for certain merchant generating plants in PJM. FirstEnergy has neither demonstrated the existence of an emergency that would support action by the Secretary under FPA section 202(c), nor shown that its requested relief is reasonable.

¹ 18 C.F.R. §§ 385.212, 385.214, and 385.211 (2017). The Department has pointed to FERC’s procedural rules where the Department’s regulations at 10 C.F.R. § 205.370, *et. seq.*, are silent. *See, e.g.*, DOE Answer to Procedural Questions Concerning Rehearing of DOE Order, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 30, 2005) at 2.

² 16 U.S.C. § 824a(c).

I. DESCRIPTION OF FIRSTENERGY'S REQUEST

FirstEnergy claims that an emergency condition exists in the PJM region due to recent and imminent retirements of nuclear and coal-fired generating units.³ According to FirstEnergy, these plant retirements threaten generation diversity, reliability, resilience, and electric security in PJM.⁴ To address this alleged emergency, FirstEnergy asks the Secretary to issue a section 202(c) emergency order: (1) directing certain existing nuclear and coal-fired generators in PJM to enter into contracts with PJM “to generate, deliver, interchange, and transmit electric energy, capacity, and ancillary services to maintain fuel diversity and grid dependability and resiliency within the PJM region;”⁵ and (2) directing PJM to pay these merchant generating units “just and reasonable cost-based rates that provide for full cost recovery consistent with ratemaking standards and principles or as otherwise necessary to ensure continued operations.”⁶ As proposed in the Request, relief would extend to *all* eligible plants in PJM, not just those owned and operated by FirstEnergy.⁷

FirstEnergy asks the Secretary to issue an emergency order immediately.⁸ And “[i]f PJM and the owners are unable to agree to the contractual terms within fifteen (15) days of the issuance of the order,” FirstEnergy requests “that the Secretary step in and determine the just and

³ See Request at 16.

⁴ See *id.* at 22.

⁵ *Id.* at 31.

⁶ *Id.* The Request (at 30) defines eligible plants as follows:

[N]uclear and coal-fired generators located within the PJM footprint that have a supply of fuel on-site sufficient to allow twenty-five (25) days of operation at full output, that are substantially compliant with all applicable federal, state, and local environmental laws and regulations, and that do not recover any of their capital or operating costs through rates regulated by a duly authorized state regulatory authority, municipal government, or energy cooperative.

⁷ *Id.* at 27-28.

⁸ *Id.* at 27.

reasonable compensation and conditions.”⁹ FirstEnergy proposes that the emergency order remain in place for four years, “or until the Secretary determines that the emergency has ceased to exist because the PJM markets have been fixed to properly compensate these units for the resiliency and reliability benefits that they provide, whichever is later.”¹⁰

II. MOTION TO INTERVENE

APPA is the national service organization representing the interests of not-for-profit, state, municipal and other locally owned electric utilities throughout the United States. More than 2,000 public power utilities provide over 15 percent of all kWh sales to ultimate customers and to businesses in every state except Hawaii. APPA utility members’ primary goal is providing customers in the communities they serve with reliable electric power and energy at the lowest reasonable cost, consistent with good environmental stewardship. This orientation aligns the interests of APPA-member electric utilities with the long-term interests of the residents and businesses in their communities. Collectively, public power systems serve over 49 million people.

APPA has utility members within the PJM region that may be directly affected by any action taken by the Secretary on FirstEnergy’s Request. Further, the Secretary’s actions in this matter could potentially have broader implications for the regulation of wholesale electricity markets in the United States, and APPA wishes to intervene to represent the interests of its members on such issues. For these reasons, the participation of APPA in this proceeding is consistent with the public interest, and APPA moves for leave to intervene as a party.

APPA respectfully requests that communications regarding this proceeding be directed to

III. PROTEST

FirstEnergy has not demonstrated the existence of an emergency within the meaning of FPA section 202(c), and APPA urges the Secretary to deny the Request. The crux of FirstEnergy's claim that an emergency exists is that retiring merchant coal and nuclear plants continue to be necessary for the reliable and resilient operation of the grid in the PJM region, which would otherwise be overly dependent on natural gas-fired plants and other forms of generation that lack fuel security.¹¹ FirstEnergy contends that FERC and PJM have not done enough to prevent coal and nuclear plant retirements,¹² arguing, in particular, that PJM markets do not adequately compensate the reliability and resiliency benefits of traditional baseload units with secure fuel supplies.¹³ FirstEnergy's general claims concerning the potential adverse impacts of coal and nuclear plant retirements in PJM do not establish the existence of an emergency within the meaning of section 202(c), let alone one that would justify imposing cost-of-service payments for merchant plants on consumers in PJM for at least a four-year period.

Section 202(c) provides a narrow and limited mechanism for the Secretary "to require temporary connections of facilities and such generation, delivery, interchange, or transmission of

¹¹ See generally *id.* at 16-24.

¹² See *id.* at 8-12.

¹³ See *id.*

electric energy” during emergencies.¹⁴ Neither section 202(c) nor the Department’s implementing regulations contemplate broad, protracted intervention in wholesale energy markets, and the Secretary’s emergency authority simply cannot be invoked based on claims that plant retirement trends and over-reliance on a particular type of generation may pose reliability challenges some years in the future. The D.C. Circuit has specifically observed that FPA section 202(c) is not a means to secure one particular type of resource during periods of system surplus; rather, the provision “speaks of ‘temporary’ emergencies, epitomized by wartime disturbances, and is aimed at situations in which demand for electricity exceeds supply and not at those in which supply is adequate but a means of fueling its production is in disfavor.”¹⁵ Consistent with this narrow interpretation of the statute, the Department’s regulations specify that “[a]ctions under [FPA section 202(c)] authority are envisioned as meeting a *specific inadequate power supply situation*.”¹⁶

Moreover, FirstEnergy’s claimed “emergency” is, at bottom, based on economics; FirstEnergy contends that merchant coal-fired and nuclear plants in PJM are inadequately compensated for the reliability and resilience benefits they provide.¹⁷ The Department’s regulations specifically state, however, that “[s]ituations where a shortage of electric energy is projected due solely to the failure of parties to agree to terms, conditions *or other economic factors relating to service*, generally will not be considered as emergencies unless the inability to

¹⁴ 16 U.S.C. § 824a(c).

¹⁵ *Richmond Power & Light Co. v. FERC*, 574 F.2d 610, 615 (D.C. Cir. 1978) (footnote omitted).

¹⁶ 10 C.F.R. § 205.371 (emphasis added).

¹⁷ See, e.g., Request at 3 (arguing that “[t]he very diversity of supply that baseload nuclear and coal-fired units provide is being lost more and more each day as more and more of these plants retire because their fuel security and resiliency are not properly recognized and valued by the current administrative market rules.”); see also *id.* at 32 (indicating that the emergency would “cease[] to exist [once] the PJM markets have been fixed to properly compensate these units for the resiliency and reliability benefits that they provide”).

supply electric service is imminent.”¹⁸ FirstEnergy’s Request cites plant retirements that may occur “in the next several years,”¹⁹ which does not demonstrate an “imminent” inability to supply electric service in PJM that could possibly justify characterizing the situation in PJM as an “emergency” within the meaning of FPA section 202(c).²⁰

While FirstEnergy claims that PJM is facing an “impending crisis,”²¹ the evidence cited in the Request does not establish that retirement of coal and nuclear electric generation resources in the PJM region presents an immediate reliability threat justifying sweeping action under FPA section 202(c). In a March 30, 2018 letter to the Secretary responding to FirstEnergy’s Request, PJM “state[d] without reservation [that] there is no immediate threat to system reliability.”²² PJM emphasized that plant retirements in the region are subject to review by PJM, which has “a range of tools available” to address any identified resource adequacy or reliability problems associated with plant retirements, including “offering full cost of service compensation . . . to induce assets to remain temporarily on-line.”²³

Importantly, most of the same arguments FirstEnergy raises in its Request were considered by FERC in response to the Secretary’s proposed grid resiliency pricing rule,²⁴ and FERC found that requiring full cost recovery for fuel-secure merchant generating facilities was

¹⁸ 10 C.F.R. § 205.371 (emphasis added).

¹⁹ Request at 20.

²⁰ In addition to the discussion above, APPA endorses the legal analysis of the PJM Consumer Representatives in this proceeding showing the narrow and limited scope of FPA section 202(c), and its inapplicability to the factual circumstances described by FirstEnergy. See Protest of the PJM Consumer Representatives to the Emergency Order Request of FirstEnergy Solutions Corp. at 4-13 (April 5, 2018).

²¹ Request at 26.

²² PJM Response at 1.

²³ *Id.*

²⁴ *Grid Resiliency Pricing Rule*, 82 Fed. Reg. 46,940 (Oct. 10, 2017).

not justified.²⁵ FERC's January 8 Order on the Secretary's proposed rule noted that FirstEnergy and other commenters "allege[d] grid resilience or reliability issues due to potential retirements of particular resources,"²⁶ but the Commission found "that these assertions do not demonstrate the unjustness or unreasonableness of the existing RTO/ISO tariffs."²⁷ FERC prudently instituted proceedings to further analyze and address the issues raised by the Secretary's proposed rule,²⁸ and those proceedings are ongoing, as FirstEnergy acknowledges.²⁹ FirstEnergy did not seek rehearing of FERC's January 8 Order, and it is inappropriate for FirstEnergy to seek essentially the same relief from the Secretary that FERC, applying its exclusive jurisdiction over the rates, terms, and conditions of wholesale sales of electricity, found to be unjustified.³⁰

Even if the Secretary were inclined to agree that the potential retirement of coal and nuclear plants in PJM is cause for concern, the relief requested by FirstEnergy is not reasonable. FirstEnergy asks the Secretary to require PJM and all eligible merchant generators to enter into full cost-of-service contracts (the cost of which would be passed on to consumers in the PJM region) without any showing that any particular resource is critical to reliability or resilience in

²⁵ See *Grid Reliability and Resilience Pricing*, 162 FERC ¶ 61,012 at PP 14-15 (Jan. 8, 2018) ("January 8 Order").

²⁶ *Id.* at P 15 (footnote omitted).

²⁷ *Id.*

²⁸ *Id.* at PP 17-20.

²⁹ Request at 9-10. One piece of evidence cited by FirstEnergy that was not considered by FERC in its January 8 Order is the recent study by the Department's National Energy Technology Laboratory ("NETL") concerning the performance of coal and nuclear plants during the extreme cold weather in late 2017 and early 2018. See Request at 4. Evidence that coal and nuclear plants currently contribute to resource adequacy and reliability in the PJM region, however, does not establish that the potential retirement of some of these plants creates an emergency situation in PJM. Moreover, the PJM Consumer Representatives and other commenters in this proceeding have questioned the validity and significance of the NETL study's conclusions. See PJM Consumer Representatives Protest at 25-28; March 30, 2018 Letter from Sierra Club at 12-15; March 20, 2018 Letter of Environmental Defense Fund and the Natural Resources Defense Council at 6-7.

³⁰ As the PJM Consumer Representatives note, the Department of Energy Organization Act provides that "[t]he decision of [FERC] involving any function within its jurisdiction . . . shall not be subject to further review by the Secretary or any officer or employee of the Department." 42 U.S.C. § 7172(g).

PJM.³¹ There is also a fundamental disconnect between the alleged problem identified by FirstEnergy and its proposed solution. As noted above, FirstEnergy's "emergency" argument boils down to a claim that coal and nuclear plants in PJM receive inadequate revenues and will retire in large numbers. Yet eligibility for FirstEnergy's proposed emergency relief does not require a showing that a plant is not currently recovering its costs, or that the plant would retire but for the opportunity to execute a long-term, cost-of-service contract with PJM. Further, the PJM Tariff already provides a process for PJM to review the reliability impacts of generator retirements, and PJM has tools to avoid adverse impacts, including offering cost-based compensation to incent plants to stay in service. FirstEnergy also never explains why four years would be an appropriate term for an emergency order to remain in effect. The costs to consumers in the PJM region could be enormous if the Secretary were to implement the requested emergency relief, and FirstEnergy has not shown that its proposed relief is reasonably tailored to addressing the issues that FirstEnergy identifies.³²

APPA wishes to emphasize that it is not dismissing the broader concerns underlying FirstEnergy's Request. APPA agrees that fuel supply diversity enhances system reliability and resilience, and there is no dispute that existing coal and nuclear plants currently make important contributions to resource adequacy in the PJM region. APPA also shares the concern that the organized markets operated by FERC-approved Regional Transmission Organizations ("RTOs") and Independent System Operators ("ISOs") have not proven to be well-suited to addressing fuel

³¹ See Request at 27-28. FirstEnergy never specifies the grounds on which it claims standing to ask for an emergency order applicable to merchant coal and nuclear plants that are not owned by FirstEnergy.

³² APPA also notes that FirstEnergy's request that the Secretary, rather than FERC, determine the just and reasonable compensation for sales from eligible plants if PJM and the plants' owners are unable to agree is directly contrary to the Department's regulations. See 10 C.F.R. 205.376 (2017) (providing that "[i]n the event that the DOE determines that an emergency exists under section 202(c), and the 'entities' are unable to agree on the rates to be charged, the DOE shall prescribe the conditions of service and refer the rate issues to [FERC] for determination by that agency in accordance with its standards and procedures.").

diversity objectives. These are important and complex issues that regulators, policymakers, and industry stakeholders must address, and are currently seeking to address, in FERC's resilience proceeding, in individual RTO/ISO stakeholder processes, in North American Electric Reliability Corporation ("NERC") proceedings, and elsewhere. APPA strongly disputes the notion, however, that drastic intervention in the markets using the Secretary's FPA section 202(c) emergency authority is an appropriate solution to these concerns in the PJM region.

IV. CONCLUSION

APPA submits that its participation in this proceeding is in the public interest and respectfully asks that its motion to intervene be granted. Further, for the reasons set forth herein, the Secretary should deny FirstEnergy's request for an emergency order under section 202(c) of the FPA.

Respectfully submitted,

Department of Energy
Secretary Rick Perry
Washington, DC 20009

Dear Secretary Perry,

On behalf of the 3 million skilled craft professionals that constitute the 14 affiliates of North America's Building Trades Unions (NABTU), I am writing in support of FirstEnergy Solutions' (FES) request to the U.S. Department of Energy to issue an emergency order to provide cost recovery to coal and nuclear plants in the PJM Interconnection market.

As you know, the FES request came last week when they also announced the retirement of three nuclear facilities over a three-year span. These plant closures place in jeopardy the livelihoods of the 2,300 workers employed by FES, directly impacting the economic and employment engines for the communities they serve.

The impact is compounded by the fact that thousands of NABTU men and women in Ohio and Western Pennsylvania perform millions of manhours at these facilities during scheduled outage work. During this time, 800-1,500 skilled craft workers are required to complete the work safely and on time.

The announcement of additional nuclear retirements is further proof we are at an inflection point in the debate over market reforms. Coal and nuclear are the most job-intensive sources of power generation. North America's Building Trades Unions supports First Energy Solutions request for DOE to use emergency powers and guarantee revenues to coal and nuclear plants in the PJM Interconnection region; maintaining the economic stability of our members and their communities.

Sincerely,

Sean McGarvey
President

From: Schwarzbaum, Paul <PSchwarzbaum@GTTechnologies.com>
Sent: Tuesday, April 10, 2018 3:05 PM
To: Secretary Perry
Subject: Impact of Baseload Power Retirements on National Security

Dear Secretary Perry,

I am the president and CEO of GT Technologies, Inc., a 113 year-old “Tier 1” supplier of engine valvetrain components to the automotive and heavy duty vehicle industries. My customers include such iconic American companies as Ford, GM, Cummins and Caterpillar, as well as leading international manufacturers with large American workforces, including Fiat Chrysler and Bosch.

If any of my three manufacturing plants in Defiance and Toledo, Ohio were to lose power for a sustained period of time, we could shut down multiple U.S. automotive plants and idle hundreds of thousands of American workers, to say nothing of adversely impacting the financial well-being of my own employees, their families, and the scores of businesses with their thousands of employees that depend on my company’s economic activity.

So it is with great concern that I have been following the saga of Ohio-based utility First Energy.

It is also with great appreciation that I have followed your personal efforts to prod the Federal Energy Regulatory Commission to issue sua sponte orders to the North American Electric Reliability Corporation to make the US bulk power system more reliable and resilient.

I appreciate your mindfulness that the DOE’s primary obligation is to national security and thus to assure that the U.S. economy is supported with reliable power. Your staff’s August 2017 report on the reliability and resilience of the electric grid is excellent. I applaud your initiative to direct your staff to create this report with its many sensible policy recommendations!

Market competition must always come second to national security. I say this as a manufacturing company CEO, a Harvard MBA – a person who clearly understands and values capitalism and competition.

Accordingly, I urge you to take whatever legal steps are in your power to assure that Ohio – the Midwest – the USA – will have reliable electrical power; and if that means bailing out First Energy and implicitly showing that PJM’s electricity market is a failed experiment, then so be it. (In fact, the Eastern Interconnection was not designed to support a long-distance “open” electricity market and it is dangerously overstressed.)

Until there is a way to reliably store sufficient quantities of natural gas on site at generating plants and to enable the “black-start” of all baseload power generation plants, only coal-fired plants, nuclear power plants, and hydroelectric dams will be able to address our national security needs for large amounts of resilient power.

More generally, I strongly encourage you to continue to press FERC to do its job; and for the DOE to take the lead in actively coordinating the development of a comprehensive set of policies and strategies with the Department of Homeland Security and U.S. Armed Forces to neutralize the threat to the U.S. bulk power system posed by disruptions to fuel supply and power distribution. Potential disruptions include winter weather (ice storms and frozen gas lines); cyber-terrorism (four US gas pipeline firms hit by coordinated cyber attacks in the past five days); and physical terrorism (recall the attack on PG&E’s Metcalf substation in 2013). With

electric utility CEOs predicting the retirement of a material portion of our country's baseload generation capacity over the next few years, and with ISO-New England forecasting rolling blackouts in their region by 2025, time is of the essence.

Thank you for championing the reliable and resilient generation and distribution of electricity to support America's national security.

Sincerely,

Paul Schwarzbaum
President and CEO
GT Technologies, Inc.

April 10, 2018

Honorable Rick Perry, Secretary
Department of Energy
1000 Independence Ave. SW
Washington, DC 20585

Dear Secretary Perry,

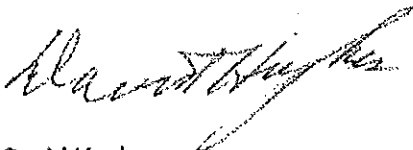

I am a FirstEnergy [PJM Interconnection] ratepayer. I am writing to ask that you reject FirstEnergy's subsidiary First Energy Solution's (FES) request under section 202(c) of the Federal Power Act for a declaration of emergency. There is no emergency. As PJM has made clear: "Nothing we have seen to date indicates that an emergency would result from the [FirstEnergy] generator retirements."

Granting FirstEnergy's request would be very disruptive to competitive markets and on that basis alone should be rejected.

FirstEnergy has a long track record of bad management decisions that have resulted in its ratepayers having to pay some of the highest electricity rates in the country. To grant this request would be another ratepayer bailout for bad management. Beginning in the 1970s with the decision to build 9 nuclear units, FirstEnergy management has made a series of bad decisions. The mismanagement of the construction of the Perry I and Beaver Valley II nuclear units resulted in \$9 billion in cost overruns. Most of these costs were passed on to ratepayers in the 1980s even though these units represented excess capacity in the FirstEnergy generation portfolio. Only high rates and billions of dollars in "stranded cost" recovery in the form of a "competitive transition charge" have likely kept First Energy Solutions from declaring bankruptcy a long time ago.

In addition, FirstEnergy has used a second phony argument for claiming it deserves a bailout. It claims it is not receiving sufficient compensation for the "unique benefits" that its nuclear units provide. FirstEnergy has been attempting to get the Ohio and Pennsylvania legislatures to give it a bailout in the form of "Zero Emissions Credits", another ratepayer charge. However, despite the myth that nuclear plants are a clean source of energy, the fact is they routinely vent some of the deadliest gases known to exist. And, the process to make commercial grade fuel for nuclear plants contributes to Climate Change.

Mr. Secretary, enough is enough. I urge you to do the right thing on behalf of the millions of ratepayers, not only in the FirstEnergy service territory, but throughout the PJM Interconnection: put an end to this history of gouging ratepayers to cover inept management.

**Re: Motion to Intervene and Protest of Pennsylvania Public Utility
Commission**

Dear Secretary Perry, Assistant Secretary Walker and Deputy Assistant Secretary Jereza:

The Pennsylvania Public Utility Commission (PAPUC), by and through its undersigned counsel, files this Motion to Intervene and Protest in the proceeding involving the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. (FES).

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES sent a letter (Request) to U.S. Department of Energy (Department) Secretary James Richard Perry, formally requesting that Secretary Perry invoke his emergency authority under Federal Power Act (FPA) Section 202(c),¹ to find that an emergency condition exists in the PJM Interconnection (PJM) territory that requires immediate intervention. In the Request, FES seeks relief under Section 202(c), whereby the Secretary would order “certain existing nuclear and coal-fired generators” to contract with PJM for energy, capacity, and ancillary services to “maintain the stability of the electric grid.”² Further, FES requests that Secretary Perry order PJM to “promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide.”³ FES served the Request on numerous affected parties.

II. MOTION TO INTERVENE

The PAPUC is the agency charged with the responsibility for regulating electric utility rates and service within the Commonwealth of Pennsylvania, pursuant to the Public Utility Code.⁴ In this role, the PAPUC has authority to represent the interests of Pennsylvania electric consumers in proceedings before federal courts, the Federal Energy Regulatory Commission (FERC) and other federal agencies including the Department.

¹ 16 U.S.C.S. § 824a (c).

² FES Letter at 1.

³ *Id.* at 1.

⁴ 66 Pa. C.S. § 101 *et seq.*

Pennsylvania is centrally located within the Mid-Atlantic Region of the United States and possesses significant amounts of fossil fuel generation, as well as renewable generation. Pennsylvania is a major consumer of electricity with its industrial, commercial, and residential load and is one of the country's largest producers of natural gas, primarily from the Marcellus Shale formation. Growing development of this fuel source has made natural gas plentiful and economically attractive. This, in turn, has greatly accelerated a shift away from coal-fired generation toward gas-fired electric generation, along with construction of gas-fired electric generation, including combustion turbines.

The PAPUC has a vested interest in ensuring that adequate generation exists to meet the current and future needs of its residents and the region. In this regard, the PAPUC has been an active supporter of electric wholesale capacity markets and the initiatives advanced by the FERC and PJM, the regional transmission organization, to incentivize the continued development of new generation in the Mid-Atlantic region. Moreover, the PAPUC has a significant and direct interest in this proceeding that is not adequately represented by other parties.

If FES' Request is granted, prospective payments made pursuant to an Emergency Order would almost certainly be recovered from consumers throughout the PJM region, including millions of ratepayers in the Commonwealth of Pennsylvania. The PAPUC opposes the Request because, contrary to the assertions made therein, no foreseeable reliability risk exists. We reserve the right to supplement this preliminary pleading to

explain, in detail, what effect the Request would have on Pennsylvania's ratepayers and competitive market.

III. PROTEST

The PAPUC protests FES' Request as legally and factually insufficient under Section 202 (c), and further, contends that the damage to electric wholesale markets and, by extension, retail customers far outweighs the speculative benefits advocated by FES. In support of its Protest, the PAPUC avers as follows:

- The overwhelming evidence presented in letters filed by numerous parties to this proceeding demonstrates that no "emergency condition" exists to justify the extraordinary provisions of Section 202(c) of the FPA. Additionally, the allegations are altogether too remote to be actionable. FES' nuclear units are not scheduled for deactivation until May 31, 2020, for one unit, and May 31, 2021, for 3 other units at two plant sites. Wholesale market prices and market structures in future years may depart substantially from current market prices and structures. In the absence of credible evidence, FES' Request fails as legally and factually adequate to justify the relief it requests.
- FES' Emergency Order Request seeks unprecedented and overbroad relief. FES threatens the efficient functioning of organized competitive wholesale electricity markets by providing *de facto* cost of service treatment to coal and nuclear generation without adequate justification.
- Reliability is not at credible risk, as PJM's recent filings demonstrate. Moreover, if reliability concerns do arise, PJM has adequate processes for addressing those concerns.⁵
- Resilience and reliability are complex topics that are currently being examined within the PJM stakeholder process. These processes should be permitted to go forward, rather than coopting these

⁵ Reliability Must Run (RMR) protocol in PJM Manual 14D, pursuant to which PJM may request a unit to operate past its desired deactivation date.

processes through the Department's action vis a vis Section 202(c). PJM has an ongoing stakeholder process to address market design improvements, and is currently examining several energy, capacity, and ancillary market reforms, in addition to grid resiliency⁶ issues. FES should not be permitted, through this Request, to circumvent the thorough stakeholder process currently established in PJM to elevate their self-serving interests over those of other competitive suppliers, technologies, utilities and end-use customers.

- If granted, the Request may unnecessarily raise energy costs for consumers and directly undercut the tremendous economic advantage to the United States from abundant natural gas deposits.
- FES, through its Request, is seeking to insert itself into matters of state jurisdiction as it relates to resource adequacy, resource selection criteria and state energy policy. These are matters established by the Governor and the Pennsylvania General Assembly,⁷ as implemented through the PAPUC, and other departments within the Commonwealth of Pennsylvania.

The PAPUC respectfully urges the Department to give all interested parties sufficient time to present their responses to the FES Request before the Department rules on the Request. The PAPUC supports and concurs in the Trade Group request, filed March 30, 2018, seeking a 60-day comment period.

⁶ *Grid Resilience in Regional Transmission Organizations and Independent System Operators*, Docket No. AD18-7-000, Order issued January 8, 2018.

⁷ 66 Pa.C.S. §§2801 *et seq.* and §§ 2201 *et seq.*

IV. SERVICE OF DOCUMENTS

The PAPUC designates the following persons to receive service and communications on its behalf in this proceeding:

James P. Melia
James A. Mullins,
Pennsylvania Public Utility Commission
400 North Street, Harrisburg, PA 17120
Tel: 717-787-1859; 717-787-5978
jamullins@pa.gov
jmelia@pa.gov

V. CONCLUSION

For the foregoing reasons, the PAPUC respectfully requests that the Department grant the PAPUC's Motion to Intervene, accept its Protest, provide all interested parties 60 days to file comments on the Request and reject FES' Request for relief under Section 202(c) of the FPA.

RE: First Energy Solutions Corp. March 29, 2018 Request for Emergency Order
Motion to Intervene of Rockland Electric Company

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Enclosed is Rockland Electric Company ("Rockland") Motion to Intervene in the above proceeding concerning First Energy Solutions Corp.'s March 29, 2018 ("FES") Request For Emergency Action ("Request"). Rockland is a public utility serving approximately seventy-two thousand retail electric customers in New Jersey who will be affected by the FES request.

Rockland Electric Company

UNITED STATES OF AMERICA BEFORE THE
DEPARTMENT OF ENERGY

The Request for Emergency Order of)
First Energy Solutions Corp. dated) DOE Docket No. _____
March 29, 2018)

MOTION TO INTERVENE

Rockland Electric Company ("Rockland") hereby moves to intervene in the above-captioned proceeding.

I. PROCEDURAL BACKGROUND

On March 29, 2018, First Energy Solutions Corp. (FES) issued a letter request to the Honorable James Richard Perry, Secretary of Energy, requesting that the Secretary use emergency authority under Section 202(c) of the Federal Power Act to find that an emergency condition exists in the PJM Interconnection, L.L.C. (PJM) territory requiring immediate intervention. Specifically, FES requested that the Secretary (a) order "certain existing nuclear and coal-fired generators ... to enter into contracts" with PJM to generate and transmit energy, capacity, and ancillary services to "maintain the stability of the electric grid" and (b) order PJM to "promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide" to energy markets and the public.

II. MOTION TO INTERVENE

Rockland is a public utility engaged in the transmission and distribution of electricity in New Jersey, and serves approximately 72,000 retail electric customers in New Jersey. Rockland Electric owns transmission facilities in PJM Interconnection, L.L.C. ("PJM") and is a member of PJM. Rockland and its customers will be directly affected by the outcome of these proceedings, and its interests cannot be represented adequately by any other party.

III. NOTICES AND CORRESPONDENCE

All communications, pleadings and orders with respect to this proceeding should be sent to the following individuals:

UNITED STATES DEPARTMENT OF ENERGY

)	
Request for Emergency Order)	
Pursuant to Federal Power Act)	DOE Docket/Order No. _____
Section 202(c) by FirstEnergy)	
Solutions Corp.)	
_____)	

SIERRA CLUB'S MOTION TO INTERVENE

Sierra Club moves to intervene in any proceeding that the Department of Energy (the "Department") may undertake with regard to the request by FirstEnergy Solutions Corp. ("FirstEnergy") for an emergency order, pursuant to section 202(c) of the Federal Power Act, 16 U.S.C. 824a(c), made on March 29, 2018 (the "Request"). *See* 18 C.F.R. § 385.214(a)(3).¹

BACKGROUND

FirstEnergy has requested an order that would: (a) "direct ... certain existing nuclear and coal-fired generators" within the region operated by PJM Interconnection, LLC ("PJM") to "enter into contracts and all necessary arrangements with PJM ... to generate, deliver, interchange and transmit electric energy, capacity and ancillary services"; and (b) require "PJM to pay" those generators "just and reasonable rates that provide for full recovery of [their] fully allocated costs and a fair return of equity." Request 1, 31. Sierra Club filed a letter with the Department on March 30, 2018, urging the Department to deny that relief,

¹ In the past, the Department has advised parties with an interest in orders issued under section 202(c) to follow the procedures set out in 18 C.F.R. Subpart 385, though those regulations do not, by their terms, apply to the Department's actions under that section, 18 C.F.R. § 385.201.

or at a minimum, to open formal proceedings to solicit public comment on the Request. *See generally* Letter from Casey Roberts & Sanjay Narayan to Hon. Rick Perry & Catherine Jereza dated March 30, 2018 (attached).

STATEMENT OF OPPOSITION

Sierra Club opposes FirstEnergy's Request; the order sought by FirstEnergy is beyond the Department's authority under section 202(c), and is not reasonably supportable, or in the public interest. *See generally id.* (stating Sierra Club's position and basis in fact and law).²

BASIS FOR INTERVENTION

Sierra Club has a substantial interest that may be directly affected by the outcome of any proceeding responding to the Request. The requested order would require PJM to negotiate contracts with dozens of coal and nuclear-power generation units across PJM's territory, to provide those generation owners with recovery of all their costs, including a rate of return. These additional costs would be passed on to PJM's ratepayers. The relief that FirstEnergy seeks for all merchant units in PJM is extremely similar to that called for in the Grid Resiliency Pricing Rule, unanimously rejected by the Federal Energy Regulatory Commission

² Sierra Club reserves the right to amend or alter its position, depending on the action, if any, taken by the Department in response to the Request, and the actions of other affected parties. *See* 18 C.F.R. § 385.214(b)(1) (applicant to intervene must only state position "to the extent known.")

last fall.³ That rule was projected to have costs of up to \$8.1 billion annually for PJM ratepayers.⁴

As of late 2016, Sierra Club had over 112,000 members who reside in the service territory of PJM and pay electricity bills to load-serving entities that buy power from PJM. These members would see higher electricity bills as a result of FirstEnergy's requested order. These financial harms to our members are germane to Sierra Club's mission, which includes addressing the quality of the human environment by promoting an affordable transition to clean energy. Sierra Club also has offices in PJM territory and is itself a ratepayer affected by any cost increases put in place as a result of an order responsive to FirstEnergy's request.

In addition, Sierra Club members are affected by the pollution that will be produced by continued operations of coal-fired power plants that would otherwise retire in the near future. As described in our previous letter, most of the retirements vaguely alluded to by FirstEnergy are several years away. However, several units have already been cleared for retirement, such as FirstEnergy's Pleasants Power Station, which PJM has determined can close on January 1, 2019 without any adverse impacts on reliability.⁵ Sierra Club has members who live near to the

⁴ See Robbie Orvis et al., The Department of Energy's Grid Resilience Pricing Proposal: A Cost Analysis (Oct. 2017), available at http://energyinnovation.org/wp-content/uploads/2017/12/20171025_Resilience-NOPR-Cost-Research-Note-UPDATED.pdf (Table 2: Annual Increase in Customer Costs by Region, Reading 4, Total).

⁵ Robert Walton, PJM greenlights FirstEnergy to deactivate coal plant units at Pleasants Power Station, UtilityDive (Mar. 22, 2018), at <https://www.utilitydive.com/news/pjm-greenlights-firstenergy-to-deactivate-coal-plant-units-at-pleasants-pow/519791/>.

Pleasants Power Station, and are therefore negatively affected by air pollution from the coal-burning plant. This ongoing harm to Sierra Club's members would otherwise cease upon the plant's deactivation, but would persist if the plant received additional compensation as envisioned in the Request.

The Sierra Club has a demonstrated organizational commitment to the above-described interests. The Sierra Club's Beyond Coal Campaign seeks to reduce the pollution currently being produced by coal-fired power plants such as those that FirstEnergy seeks to support. To that end, Sierra Club has participated in regulatory proceedings relating to nearly all of the units listed in Attachment A to FirstEnergy's request, seeking to mitigate their pollution, minimize costs that ratepayers must bear to support these plants, or both.

For all of those reasons, Sierra Club has an interest that may be directly affected by the outcome of any proceeding in response to FirstEnergy's Request, and Sierra Club's participation is in the public interest.

SERVICE AND COMMUNICATIONS

Service upon Sierra Club may be made, and communications to Sierra Club may be addressed, to:

Catherine.Jereza@hq.doe.gov

Dear Mr. Perry and Ms. Jereza:

FirstEnergy Solutions Corp. ("FirstEnergy" or "FES") has submitted a request for an emergency order, pursuant to, *inter alia*, section 202(c) of the Federal Power Act. As envisioned by FirstEnergy, such order would result in utility customers paying above-market cost-of-service rates (including a guaranteed profit) for at least four years to the owners of all merchant coal and nuclear generating units in PJM that have at least 25 days' worth of onsite fuel. According to FirstEnergy, such payments are necessary to prop up those merchant coal and nuclear plants in order to ensure "resiliency" in the PJM system and avoid an "emergency" triggering the extraordinary powers of section 202(c). In reality, however, FirstEnergy has not shown that resiliency is at risk, or that the aging coal and nuclear units that may be retiring over the next seven years are needed to ensure such resiliency. Nor has FirstEnergy proposed a remedy that could be legally authorized under the Federal Power Act.

FirstEnergy's request here is nothing more than a slightly scaled down version of the Grid Resiliency Pricing proposal that the Federal Energy Regulatory

Commission (“FERC”) unanimously rejected less than three months ago. FirstEnergy has not and could not provide any basis for a different result to be reached here. As such, the Department can reject FirstEnergy’s legally flawed and factually unsupported request out of hand.

If the Department does not reject FirstEnergy’s request as not approvable on its face, we urge you to open up a formal docket, or undertake some other public proceedings to solicit public comments, so that the Department can reach a considered decision in this matter.¹ As set forth below, FirstEnergy’s application raises substantial legal and policy issues, will impose staggering costs on PJM ratepayers, and undermine competition and investor certainty in the PJM marketplace.

I. Procedure and Standing

In this letter, Sierra Club sets out its initial comments in response to FirstEnergy’s request. Should the Department not reject FirstEnergy’s request outright, we expect that it will open a docketed proceeding to address the request, as it did in response to the request from PJM Interconnection last year regarding the Yorktown units.² Sierra Club intends to fully participate in that proceeding through the submission of evidence and legal argument, and to seek rehearing should the Department issue an order outside the scope of its authority.

Sierra Club feels compelled to offer these initial comments only the day after FirstEnergy’s request was filed because, as FirstEnergy directly acknowledges in the request, it “likely will file for bankruptcy by the end of March 2018.”³ A bankruptcy filing may affect the rights of entities such as the Sierra Club to fully protect their interests in this matter.

Sierra Club has a substantial interest in this matter and would be adversely affected in numerous ways by an order along the lines of what FES proposes. FES’ proposed order would require PJM to negotiate contracts with dozens of coal and nuclear-power generation units across PJM’s territory, to provide those generation owners with recovery of all their costs, including a rate of return. These additional

¹ The Department has taken the position that its orders, under section 202(c), are “proceedings” within the meaning of section 313 of the Federal Power Act, 16 U.S.C. § 8251. That interpretation of the Act emphasizes the appropriateness of engaging in the procedural steps by which the Department conducts its other proceedings—most importantly, notice and an opportunity for interested parties to comment.

² DOE, Federal Power Act Section 202(c) – PJM Interconnection & Dominion Energy Virginia, 2017, at <https://www.energy.gov/oe/downloads/federal-power-act-section-202c-pjm-interconnection-dominion-energy-virginia-2017-0>.

³ FirstEnergy’s March 29, 2018 request to the Department at 8, 20.

costs would be passed on to PJM's ratepayers. The relief that FES seeks for all merchant units in PJM is extremely similar to that called for in the Grid Resiliency Pricing Rule last fall.⁴ That rule was projected to have costs of up to \$8.1 billion annually for PJM ratepayers.⁵

As of late 2016, Sierra Club had over 112,000 members who reside in the service territory of PJM and pay electricity bills to load-serving entities that buy power from PJM. These members would see higher electricity bills as a result of FirstEnergy's requested order. These financial harms to our members are germane to Sierra Club's mission, which includes addressing the quality of the human environment by promoting an affordable transition to clean energy. Sierra Club also has offices in PJM territory and is itself a ratepayer affected by any cost increases put in place as a result of an order responsive to FES' request.

In addition, Sierra Club members are affected by the pollution that will be produced by continued operations of coal-fired power plants that would otherwise retire in the near future. As described below, most of the retirements vaguely alluded to by FES are several years away. However, several units have already been cleared for retirement, such as FirstEnergy's Pleasants Power Station, which PJM has determined can close on January 1, 2019 without any adverse impacts on reliability.⁶ Sierra Club has members who are negatively affected by air and water pollution from Pleasants that would otherwise cease upon its deactivation, but would persist if the plant received additional compensation as envisioned in FES' request.

The Sierra Club has a demonstrated organizational commitment to the above-described interests. The Sierra Club's Beyond Coal Campaign seeks to reduce the pollution currently being produced by coal-fired power plants such as those that FES seeks to support. To that end, Sierra Club has participated in regulatory proceedings relating to all of the units listed in Attachment A to FES' request,

seeking to mitigate their pollution, minimize costs that ratepayers must bear to support these plants, or both.

II. FirstEnergy's Application Does Not Describe Any Emergency Within the Meaning of Section 202(c) of the Federal Power Act.

1. Section 202(c) Confines Emergencies to Specific, Imminent Events.

Section 202(c) of the Federal Power Act provides the Department with authority over “the generation of electric energy” only “[d]uring the continuance of any war in which the United States is engaged,” or if “the [Department] determines that an emergency exists by reason of a sudden increase in the demand for electric energy, or a shortage of electric energy or of facilities for the generation or transmission of electric energy, or of fuel or water for generating facilities, or other causes.” 16 U.S.C. § 824a(c)(1). The statute’s use of the present text—that an emergency “exists”—demands, at a minimum, that an emergency be present, certain, and immediate, rather than distant and contingent.

That certainty and immediacy is inherent in the statute’s fundamental requirement—an “emergency.” The Act does not define “emergency”; according to the dictionary, the word primarily demands “an unforeseen combination of circumstances or the resulting state that calls for *immediate* action.” Merriam Webster’s Dictionary 407 (11th ed. 2009) (emphasis added). An emergency, by definition, is not an anticipated event occurring, perhaps, years in the future; it describes an imminent, unavoidable threat.

The surrounding context emphasizes the exigency of the circumstances described by section 202(c)’s reference to an “emergency”: the authority granted by section 202(c) is, primarily, a war-time power. 16 U.S.C. § 824a(c) (authorizing orders during “continuance of any war in which the United States is engaged”). See *Jarecki v. G.D. Searle & Co.*, 367 U.S. 303, 307 (1961) (noting that statutory terms should be interpreted in context of nearby parallel terms “in order to avoid the giving of unintended breadth to the Acts of Congress”). An “emergency” under the statute is limited to circumstances that are similarly urgent: “a *sudden* increase in the demand for electric energy,” for example. 16 U.S.C. § 824a(c) (emphasis added). See *Richmond Power and Light v. Federal Energy Reg’y Comm.*, 574 F.2d 610, 615 (D.C. Cir. 1978) (holding that section 202(c) “speaks of ‘temporary’ emergencies, epitomized by wartime disturbances” and that statute is reasonably understood to exclude circumstances such as “dependence on imported oil”).

Section 202(c) is, moreover, expressly meant to address short-term, “temporary” conditions—it provides no authority to implement long-term policy preferences, in response to potential difficulties that may emerge years from now. *Id.* Congress underlined the limited scope of section 202(c) when enacting the provision. “This is

a temporary power designed to avoid a repetition of the conditions during the last war, when a serious power shortage arose. Drought and other natural emergencies have created similar crises in certain sections of the country; such conditions should find a federal agency ready to do all that can be done in order to prevent a breakdown in electric supply.” S. Rep. No. 74-621 at 49 (1935).⁷

The Department’s regulations confirm those limitations. They define an “emergency” as “an *unexpected* inadequate supply of electric energy” resulting from “the unexpected outage or breakdown of facilities,” which may result from “weather conditions, acts of God, or unforeseen occurrences not reasonably within the power of the affected ‘entity’ to prevent.” 10 C.F.R. § 205.370 (emphases added). Anticipated customer demand can be an emergency, only upon “a *sudden* increase” in such demand emphasis). Those examples reflect the limited nature of the emergencies encompassed by section 202(c): unusual, unforeseen, and unexpected events, with immediate and substantial consequences.

2. *The Structure of the Act Further Confirms That the Authority Conferred by Section 202(b) Is Limited to Unusual, Unexpected Circumstances.*

Other portions of the statute, outside section 202(c) itself, reinforce that section’s tightly limited scope. Section 202(b) confirms the constrained nature of the Department’s emergency powers under section 202(c). That section provides cabined authority (exercised by the Federal Energy Regulatory Commission, rather than the Department) to “direct a public utility ... to establish physical connection[,] ... sell energy, or exchange energy” with other persons, under normal, non-emergency conditions. 16 U.S.C. § 824a(b). The statute establishes specific standards and procedural requirements for such non-emergency orders. *Id.* Section 202(c) removes many of those requirements—but does so only during war-time or similarly extreme circumstances. 16 U.S.C. § 824a(c). *See Otter Tail Power Co. v. Fed. Power Comm.*, 429 F.2d 232, 233-34 (1970) (holding that section 202(c) “enables the Commission to react to a war or national disaster,” while section 202(b) “applies to a crisis which is likely to develop in the foreseeable future”). That structure establishes a clear divide between quotidian energy-system management (even where necessary to avert a future crisis), governed by section 202(b), and unusual, unforeseeable ‘emergencies,’ governed by section 202(c). Read within that structure, section 202(c) cannot apply to routine planning matters; such application would render section 202(b) unnecessary, and eviscerate its procedural and substantive requirements.

⁷ While Congress amended section 202(c) in 2015, it did not alter the Department’s basic grant of emergency authority; it only addressed occasions on which a Department order might produce a conflict with other laws. *See* H.R. Rep. No. 114-357 (2015).

Section 215 of the Federal Power Act, added in 2005, suggests additional boundaries on the Department's powers under section 202(c). Section 215 provides a detailed enforcement mechanism, with specified procedures, remedies, and timeframes, for federal reliability standards. *See generally* 16 U.S.C. § 825o. As the D.C. Circuit has recognized, the portion of the Federal Power Act that predates that section—which includes section 202(c)—did not provide the federal government with the power to enforce requirements designed to ensure broad, long-term reliability requirements. *Alcoa, Inc. v. FERC*, 564 F.3d 1342, 1344 (D.C. Cir. 2009) (noting that prior to the Energy Policy Act of 2005, “the reliability of the nation’s bulk-power system depended on participants’ voluntary compliance with industry standards”). Consequently, a bare violation of a federal reliability standard cannot suffice to provide the Department with “emergency” power to enforce that standard under section 202(c). Reading section 202(c) to permit direct enforcement of reliability requirements through emergency orders would bypass the limits and procedures that Congress enacted in section 215 to constrain such enforcement. *See California Independent System Operator Corp. v. FERC*, 372 F.3d 395, 401-2 (D.C. Cir. 2004) (“Congress’s specific and limited enumeration of [agency] power over [particular matter] in [one section of Federal Power Act] is strong evidence that [separate section] confers no such authority on [agency].”). Similarly, the Federal Power Act contains separate and independent provisions to address wholesale rates, and any perceived insufficiency of such compensation. 16 U.S.C. § 824d & 824e. Those provisions likewise indicate that any perceived inadequacy in the wholesale markets cannot be an emergency sufficient to provide the Department with authority under section 202(c).

3. *The Application Does Not Contain Information Sufficient to Support Any Finding that an Emergency Exists under Section 202(c).*

a. *The Long-Term Resource-Allocation Concerns Described by FirstEnergy Are Not an “Emergency”.*

FirstEnergy’s request describes no imminent, specific threat that could plausibly qualify as an “emergency” under the statute. The request asserts a need for “fuel diversity,” and other parties’ failure to pay FirstEnergy (and other merchant coal and nuclear generators) the “compensation” to which FirstEnergy believes itself to be entitled. Request 3. It cites no imminent shortfall in supply; it states only that certain units have dispatched in the past, and suggests that such units may be replaced by other sources of supply over the next seven years. *Id.* at 8-9. The Department has never exercised section 202(c) under similar circumstances; in every case, it has carefully established an imminent, unavoidable, and specific

short-fall in electricity supply, and issued narrowly tailored orders intended to address that specific shortfall.⁸

Even if those suggestions were adequately supported (and they are not, see Part III, below), they would not suffice to demonstrate an emergency under section 202(c). The Department has made clear that its authority, under section 202(c), may only be exercised to address “a *specific* inadequate power supply situation.” 10 C.F.R. § 205.371 (emphasis added). FirstEnergy’s application alleges no such specific situation; indeed, it acknowledges as much, in its failure to meaningfully address the application requirements specified in the Department’s regulations. Request 30-31. As the D.C. Circuit has noted, such “long-term” policy concerns, associated with “broad questions of resource allocation,” are not the proper subject of an emergency order under section 202(c). *Richmond Power & Light*, 574 F.3d at 615-16 (citation omitted).

b. The Entity Authorized to Address FirstEnergy’s Concerns Has Already Established That There Is No Need for Emergency, Near-Term Action.

The Federal Power Act (and other statutes) give the Federal Energy Regulatory Commission (and the National Electric Reliability Council) primary authority over the questions that FirstEnergy asks this Department to resolve by emergency order. *E.g.*, Request 7-8 & 27 (asserting that “wholesale pricing” is not providing “full[] compensa[tion]” to FirstEnergy and threat to long-term “reliability”), and 16 (claiming non-specific “reliability” concerns). See 16 U.S.C. §§ 824d & 824o. As noted above, that the Federal Power Act includes separate, closely cabined provisions addressing such matters strongly suggests that FirstEnergy’s stated concerns are not appropriately addressed through section 202(c). Rather, they are matters for FERC, and for NERC.

And FERC has already squarely addressed, and rejected, the primary rationale provided by FirstEnergy for an order. As FirstEnergy acknowledges, FERC very recently rejected a proposal by the Department to require certain grid operators, including PJM, to provide cost-based compensation to merchant coal and nuclear generators. See FERC, Grid Reliability and Resilience Pricing, Order Terminating Rulemaking Proceeding, Initiating New Proceeding, and Establishing Additional Procedures, 162 FERC ¶ 61,012 (Jan. 8, 2018). FERC found that existing tariffs

⁸ FirstEnergy cites the Department’s recent orders regarding the Yorktown power plant. Request 19. But as the Department made clear in response to Sierra Club’s requests for rehearing, those Orders were only issued after the Department found that the orders were the sole means of avoiding “immediate interrupt[ions of] service” to a substantial portion of Virginia, and were narrowly tailored to avoid those defined, established interruptions. Summary of Findings for Department of Energy Order No 202-17-4 at 6-7.

were not unjust and unreasonable, based on the evidence that no “past or planned generator retirements . . . [are] a threat to grid resilience. *Id.* at 15. FirstEnergy presents essentially the same evidence of a threat to resiliency that the Commission rejected just a few months ago. FirstEnergy did not even seek rehearing of the Commission’s January 8 order, but instead seeks to relitigate the issue in a forum it views as more favorable. The Department should not accept FirstEnergy’s invitation to reconsider an issue decided not even three months ago by a unanimous FERC.

Although FERC decided there was no urgent threat to the grid’s reliability to justify the extraordinary action proposed by the Department, it did initiate a docket to promptly and more comprehensively address whether additional steps are needed to ensure resilience. Jan. 8 Order at 17-20. While FirstEnergy asserts that FERC’s ongoing docket to examine the problem that FirstEnergy complains of is “too little, too late,” Request at 10, FERC’s ongoing proceeding is precisely the forum to address the kinds of longer-term issues that FirstEnergy alleges, such as a substantial portion of the generation fleet retiring over a number of years. Likewise, the energy and capacity market reforms that PJM is currently considering, and will shortly present to FERC, are the proper forum to address any shortcomings in market design.

4. *The Relief Requested by the Application Is Not “Just and Reasonable” Compensation Within the Meaning of Section 202(c).*

FirstEnergy asks the Department to require that it and other merchant coal and gas generators receive compensation for “operating expenses, costs of capital and debt, and a fair return on equity and investment,” and specifically prescribe “full cost recovery consistent with ratemaking standards and principles or (b) full recovery of all costs necessary to ensure continued operations.” Request 31-32. FirstEnergy asks that contracts setting out this cost recovery be negotiated within 15 days, a virtual impossibility given the enormous number of units for which FirstEnergy seeks compensation and the likelihood that none of these units, which have operated in competitive markets for years, are prepared to present cost-of-service data to PJM. Moreover, FirstEnergy asks the Department, “if PJM and the owners are unable to agree to the contractual terms” within 15 days, to itself “determine just and reasonable rates.” *Id.*

As an initial matter, the Department’s regulations specify that, should the affected parties be unable to reach an agreement as to rates, the Department “shall . . . refer the rate issues to the Federal Energy Regulatory Commission.” 10 C.F.R. § 205.376. The Department cannot, therefore, grant FirstEnergy’s request that it directly set “just and reasonable rates,” Request at 32. The determination of just and reasonable wholesale rates is a matter indisputably within FERC’s jurisdiction, not that of the Department.

More importantly, the Federal Power Act allows the Department only to implement “just and reasonable” terms. 16 U.S.C. § 824a(c)(1). And the “full recovery” of costs and a fair return on equity that FirstEnergy requests is (Request 31)—as FERC itself has suggested—not demonstrably just or reasonable. In its January 8, 2018 order in RM18-1-000, the Commission held that the proposed remedy to “allow all eligible resources to receive a cost-of-service rate regardless of need or cost to the system” had not been shown to be just and reasonable nor to avoid undue discrimination. *Id.* at 16. FirstEnergy’s proposed compensation here suffers from many of the same flaws in the proposal that FERC rejected, including but not limited to, the lack of any explanation of whether such compensation should be net of market revenues, lack of assurance that a unit is actually needed to serve load, and lack of cost controls imposed by the scrutiny of proper cost-based ratemaking.

III. PJM is reliable and will remain so for the foreseeable future.

As with the Proposed Grid Resiliency Rule, FirstEnergy’s request relies on unfounded claims that planned retirements of existing generating units threaten the “resiliency” of the PJM system. As Sierra Club and other Public Interest Organizations explained in their initial and reply comments on the Proposed Rule, and as FERC found in rejecting the Proposed Rule, there is no evidence that such generating unit retirements threaten the reliability or resiliency of the system.⁹ Instead, as PJM recently explained in response to questions from the U.S. Senate

PJM does not believe that operating outside of the market to preserve a particular class or type of generation is needed at this time for reliability. The markets have been resilient in attracting new investment. In addition, a variety of tools exist as a backstop should specific generation be needed in a particular area.¹⁰

Nothing in FirstEnergy’s request supports a different conclusion here.

Given that FirstEnergy’s thin support for its request closely resembles that presented to initiate FERC’s consideration of the Grid Resiliency Pricing Rule, Sierra Club refers the Department to the extensive record created in that case, in particular, the comments of Public Interest Organizations, cited above, and those of PJM Interconnection, which provide a detailed rebuttal of the arguments presented

⁹ January 8, 2018 FERC Order in Docket Nos. RM18-1-100 and AD18-7-000.

¹⁰ U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 1 from Sen. Lisa Murkowski (Jan. 23, 2018).

by FirstEnergy in its Request.¹¹ We write here to briefly address two of the more egregious arguments posited in FirstEnergy's request—FirstEnergy's claims that the 2014 Polar Vortex and the recent Bomb Cyclone somehow demonstrate the resiliency value of the aging coal and nuclear units in PJM.

1. The Polar Vortex does not justify FirstEnergy's request for DOE to prop up uneconomic coal and nuclear units in PJM.

FirstEnergy's continued misrepresentation of the events of the 2014 Polar Vortex is especially galling. Request 5, 9, 17. Indeed, while FirstEnergy claims that the Polar Vortex established the necessity of its coal and nuclear units, the Polar Vortex actually showed that on-site fuel storage does not ensure enhanced resiliency.

Of the 35,000 MW of generation capacity that failed to respond, nationwide, during the Polar Vortex, 26 percent was coal and 5 percent was nuclear. DOE Staff Report at 98. And while a significant amount of natural gas capacity also experienced outages, the majority of those outages related to frozen equipment, *not* fuel supply issues.¹² Within PJM, only a quarter of the record high 22% forced outage rate on January 7, 2014, was the result of fuel supply issues.¹³ Far more significant were other causes such as faulty plant maintenance and weather-related damage.¹⁴ PJM's subsequent analysis of the Polar Vortex also highlighted that two resources not reliant on fuel—wind energy and demand—overperformed during that time period.¹⁵

¹¹ Initial Comments of PJM Interconnection, L.L.C. on the United States Department of Energy Proposed Rule.

¹² NERC Polar Vortex Review, at 2, 13 (2014), available at http://www.nerc.com/pa/rrm/January%202014%20Polar%20Vortex%20Review/Polar_Vortex_Review_29_Sept_2014_Final.pdf.

¹³ PJM, Analysis of Operational Events and Market Impacts During the January 2014 Cold Weather Events at 25 (May 8, 2014), available at <http://www.pjm.com/~media/library/reports-notice/weather-related/20140509-analysis-of-operational-events-and-market-impacts-during-the-jan-2014-cold-weather-events.ashx> (hereinafter "PJM Jan. 2014 Cold Weather Events").

¹⁴ *Id.*

¹⁵ *Id.* at 19-21 (May 8, 2014). FirstEnergy repeatedly states that 9300 MW of gas generation was unavailable during the Polar Vortex. Request 5, 17. This claim is based on the isolated fact during one hour of the Polar Vortex, 9,300 MW of generation was unavailable due to interruptions in the natural gas supply. PJM Jan. 2014 Cold Weather Events at 26. FirstEnergy fails to mention, however, that the amount of coal that experienced outages at that same time was 13,700 MW. *Id.*

FirstEnergy ignores the fact that, although fossil-fueled generators failed to perform at a significant rate during the Polar Vortex, PJM successfully managed the threat without having to resort to blackouts, and “even on the day with the tightest power supplies – January 7 – *several steps remained before electricity interruptions might have been necessary.*”¹⁶ This is in large part because PJM, like each RTO, provides for a planning reserve margin precisely to ensure reliability in the event that many supply resources are impacted at the same time, as occurred during the Polar Vortex.

And FirstEnergy also fails to acknowledge the significance of the reforms carried out after the Polar Vortex, which aimed to address the high generator outage rates during the event. In response to the Polar Vortex, FERC held a technical conference focused on the impacts of the Polar Vortex and actions to respond.¹⁷ In November 2014, FERC issued an order to initiate a review of how each RTO was addressing “fuel assurances,” a “broad concept” intending to encompass “a range of generator-specific and system-wide issues, including the overall ability of an RTO’s/ISO’s portfolio of resources to access sufficient fuel to meet system needs and maintain reliability.”¹⁸ Each affected RTO responded to this directive, and ultimately adopted a series of reforms intended to address winter performance concerns. For example, PJM implemented a series of common-sense nonmarket reforms to improve generators’ preparedness for winter conditions.¹⁹ In the very next winter, despite even higher peak winter loads, PJM saw much lower forced outage rates than during the Polar Vortex, and improved performance among generators that had participated in pre-winter operational testing—one of the reforms PJM put in place following the Polar Vortex.²⁰ In addition, both PJM and ISO-NE modified their capacity market rules so as to ensure supplier performance during scarcity conditions.²¹

¹⁶ PJM Jan. 2014 Cold Weather Events at 4.

¹⁹ See Protest of Public Interest Organizations, FERC Docket No. ER15-623-000, at Appendix B (summarizing PJM’s extensive measures to improve generator preparedness).

²⁰ See PJM Interconnection, 2015 Winter Report (May 13, 2015), at <http://www.pjm.com/-/media/library/reports-notices/weather-related/20150513-2015-winter-report.ashx?la=en>, at 5-6.

²¹ See Order on Proposed Tariff Revisions, 151 FERC ¶ 61,208 (2015); Order on Tariff Filing and Instituting Section 206 Proceeding, 147 FERC ¶ 61,172 (2014).

While FirstEnergy suggests that the Capacity Performance program somehow “failed” because it did not spur the development of new gas supply contracts,

Finally, FirstEnergy's Request would support a fleet of merchant coal units that, in fact, *performed quite poorly* during the Polar Vortex.²² Analysis by Synergy Energy Economics of hourly generation data reveals that, after initially ramping up to meet growing demand, the coal fleet's performance began to decline even before the peak hour on January 6, 2014.²³ By PJM's winter peak on the evening of the 7th, coal output had fallen by more than 2,500 MW relative to its peak from the prior day.²⁴ Even among units that remained online, most coal units provided less output at the season peak than they had the previous day.

2. The recent Bomb Cyclone weather event and resulting NETL Report do not justify FirstEnergy's request for DOE to prop up uneconomic coal and nuclear units in PJM.

In an apparent effort to distinguish its request from the rejected Proposed Rule, FirstEnergy relies heavily on a recently released National Energy Technology Laboratory report ("NETL Report") that purports to find that coal-fired generating units were critical to preserving "resiliency" in PJM and other RTOs/ISOs during the "Bomb Cyclone" winter event in late December to early January.²⁵ The NETL Report's claim about the resiliency of existing coal units in PJM is based on the fact that during the Bomb Cyclone, coal generation increased more in comparison to the level of generation from December 1 through 26, 2017 than did other forms of generation. FirstEnergy extrapolates from the report that the impacts of the Bomb Cyclone show that "immediate action" to prop up uneconomic coal and nuclear units is "critical."²⁶

FirstEnergy's reliance on the NETL Report is unavailing because that report does not actually measure resilience in PJM. Instead, as Michael Goggin at Grid

Request 11, the company does not address whether that program has, in fact, increased reliability and resiliency of the grid by incentivizing many coal and gas units to weatherize and improve their preparedness for winter events.

²² Public Interest Organization Initial Comments, RM18-1-000, Appendix E, at E-15.

²³ *Id.*

²⁴ *Id.*

²⁵ FirstEnergy Request at 3-8, citing National Energy Technology Laboratory, Reliability, Resilience, and the Coming Wave of Retiring Baseload Units Volume I: The Critical Role of Thermal Units During Extreme Weather Events (Mar. 13, 2018) ("NETL Report"), available at <https://www.netl.doe.gov/research/energy-analysis/search-publications/vuedetails?id=2594>

²⁶ FirstEnergy Request at 3.

Strategies LLC has explained,²⁷ “the report employs a flawed metric of resilience that does not indicate the performance of different types of generators, but instead simply finds which energy sources are the most expensive.” In particular, coal generation was able to increase significantly during the Bomb Cyclone only because those coal units were too costly to operate earlier in December and, therefore, were either idle or only partially utilized. The fact that those idle or partially utilized coal plants increased their generation during the Bomb Cyclone shows only that those coal generators are uncompetitive unless electricity and gas prices increase significantly. Nothing in the NETL Report shows that such increased generation, or the substantially increased costs that it would entail, are necessary to ensure the resiliency or reliability of the PJM system. All bulk electric systems will have some generation that is more expensive and is therefore used primarily during peak load conditions. In PJM’s current generation portfolio many merchant coal plants function (inefficiently) as peaking units, but when those units retire others will take their place as PJM always procures enough generation capacity to meet its reserve margin requirement. In fact, PJM is currently oversupplied and has substantially more generating capacity than it needs.

The NETL Report is unhelpful to FirstEnergy’s effort to take advantage of the Bomb Cyclone because the report fundamentally misses the point. As Michael Goggin explains:

A true examination of resilience would assess actual performance in keeping the lights on for customers. Such an effort should focus on the transmission and distribution system failures that cause the vast majority of customer outages. Such an analysis would also include a range of threats to the power system.

Neither the NETL Report or FirstEnergy’s request provide such an analysis. Instead, they rely on a simplistic assessment that shows that many coal units in PJM are expensive, but fails to support FirstEnergy’s claim that they are critically needed.

In an effort to bolster its case, FirstEnergy seizes on a statement in the NETL Report that demand in PJM “could not have been met without coal” to claim that propping up coal units that are planning to retire by 2025 is necessary.²⁸ But that claim in the NETL Report, which focuses on capacity rather than generation, is meaningless because it relies on the unrealistic assumption that no other capacity

²⁷ Michael Goggin, Fossil Lab Misses Mark in Cold Weather “Resilience” Report, (Mar. 28, 2018), available at <http://sustainableferc.org/fossil-lab-misses-mark-in-cold-weather-resilience-report/>.

²⁸ FirstEnergy Request at 4, citing NETL Report at 17.

would replace the retiring coal.²⁹ In reality, substantial amounts of new generation has come online as coal units have retired over the past eight years, as PJM recently detailed:

On the resource side, it should be noted that although PJM saw about 22,000 MW of coal units retire since 2010, the capacity market attracted more than 37,000 MW of new generation since 2007, of which more than 21,000 MW of new generation was placed in service between 2010 and 2017. This has resulted in a current PJM reserve margin of 29.1 percent, which is well above the targeted reserve margin of 16.6 percent for 2017 and 16.1 percent for 2018.³⁰

There is no reason to believe that future coal and nuclear unit retirements that may occur by 2025 would not similarly be met with new resources, including renewables, demand response, and energy storage.

Echoing the NETL Report, FirstEnergy proclaims serious concerns about the fact that many of the coal units that dispatched during the Bomb Cyclone are expected to retire in the coming years.³¹ In support, FirstEnergy notes that PJM's President has recently testified that 1,410 MWs of nuclear generation and 3,688 MWs of coal generation that operated during the Bomb Cyclone is scheduled to retire in the next five years.³² The Company neglects to mention, however, that PJM went on to explain that those retiring coal units had a significantly higher forced outage rate (ranging from 16% to 31.7%) during the Bomb Cyclone than the 8% to 11.7% forced outage rate for the non-retiring coal units during that same time.³³ In other words, on the metric that FirstEnergy claims to be concerned

²⁹ NETL Report at 17 (noting that "any retiring units that were dispatched during the event would have to be replaced.").

³⁰ U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 1 from Sen. Lisa Murkowski (Jan. 23, 2018).

³¹ FirstEnergy Request at 7.

³² FirstEnergy Request at 7, citing U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Mike Lee (Jan. 23, 2018).

³³ U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Mike Lee (Jan. 23, 2018).

about—performance during extreme weather events—the coal units that the company wants to force customers to prop up fail.³⁴

Ultimately, FirstEnergy’s attempt to use the Bomb Cyclone as an excuse to bail out its coal and nuclear plants fails because the PJM systems performance during that weather event shows that there is no looming resiliency crisis. In fact, PJM itself found that:

During the recent cold snap, PJM did not call a performance assessment interval, a 72-hour maintenance recall or any transient shortage intervals. However, the system was well tested and, as detailed in this report, there were indicators of improved performance of generating resources since 2014. Overall, the grid and the generation fleet performed well. Even during peak demand, PJM had excess reserves and capacity.³⁵

The available evidence plainly shows that in a time of major changes to the energy mix in our country, PJM is ensuring system reliability and the resilience to keep the lights on even during significant weather events such as the Bomb Cyclone. No basis has been provided for disrupting that system with substantial sums of out-of-market payments that would help prop up some of the oldest and least reliable coal units in the system while filling the coffers of the merchant generating companies that own those units.

³⁴ PJM also noted that it “does not see any challenge to reliability or fuel diversity from the announced retirements.” U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Mike Lee (Jan. 23, 2018).

³⁵ PJM INTERCONNECTION, PJM COLD SNAP PERFORMANCE DEC. 28, 2017 TO JAN. 7, 2018 (Feb. 26, 2018), available at <http://www.pjm.com/-/media/library/reports-notices/weather-related/20180226-january-2018-cold-weather-event-report.ashx>. PJM has also noted that it had 5,400 MWs of emergency demand response available during the Bomb Cyclone that it did not end up needing to utilize. U.S. Sen. Comm. on Energy and Nat. Res., *The Performance of the Electric Power System in the Northeast and Mid-Atlantic During the Recent Winter Weather Events, Including the Bomb Cyclone*, Questions for the Record Submitted to Mr. Andrew Ott, Response to Question 2 from Sen. Lisa Murkowski (Jan. 23, 2018).

IV. CONCLUSION

For the foregoing reasons, Sierra Club asks the Department of Energy to promptly deny the request of FirstEnergy Solutions.

Sincerely,

/s/ Casey Roberts

Re: **First Energy Solutions Corp. March 29, 2018 Request for Emergency Order
Duquesne Light Company's Motion to Intervene**

Dear Secretary Perry, Assistant Secretary Walker, and Deputy Assistant Secretary Jereza:

Enclosed is Duquesne Light Company's Motion to Intervene in the above proceeding of First Energy Solutions Corp.'s Request For Emergency Action. Should you have any questions please feel free to contact me

Respectfully Submitted,

Tishekia E. Williams *kw*
Attorney ID#208997

Enclosure

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

**Request for Emergency Order Pursuant to :
Federal Power Act Section 202(c) By :
FirstEnergy Solutions Corp. :** **Docket No. _____**

**DUQUESNE LIGHT COMPANY'S
MOTION TO INTERVENE**

Pursuant to the Rules of Practice and Procedure of the Federal Energy Regulatory Commission ("FERC") 10 C.F.R. § 205.374, Duquesne Light Company ("Duquesne Light") hereby moves to intervene in FirstEnergy Solutions Corp.'s ("FirstEnergy") application to the Secretary of Energy, Mr. James Richard Perry, ("Secretary") for an emergency order under Section 202(c) of the Federal Power Act. Duquesne Light received notification of FirstEnergy's application on April 9, 2018 and files this response within three (3) days of receipt as required by 10 C.F.R. § 205.374. Duquesne Light respectfully seeks to intervene in the above-referenced proceeding for the following reasons:

Duquesne Light is a public utility as the term is defined under Section 102 of the Public Utility Code, 66 Pa.C.S. § 102 and certificated by the Commission to provide electric distribution service for more than 580,000 Pennsylvania customers in portions of Allegheny and Beaver counties. Duquesne Light is also an electric distribution company ("EDC") and a default service provider as defined under Section 2803 of the Public Utility Code. 66 Pa.C.S. § 2803. Duquesne Light's transmission facilities are presently operated subject to the functional control of PJM Interconnection, L.L.C. ("PJM"). As a fellow PJM market participant with FirstEnergy, Duquesne Light has a direct and substantial interest in the outcome of this proceeding and its interests cannot be adequately represented by any other party. Duquesne Light anticipates FirstEnergy's application, if rejected, may have an impact on Duquesne Light's ability to supply its customers with reliable and uninterrupted service. It is therefore appropriate and in the public interest that Duquesne Light be permitted to intervene in this proceeding and participate with full rights as a party. Duquesne Light requests that interested parties have 60 days to file comments and/or provide relevant analysis.

Respectfully Submitted,

The Honorable Rick Perry
Secretary of the U.S. Department of Energy
1000 Independence Avenue, S.W.
Washington, DC 20585

Re: Federal Power Act, Section 202 (c)

Dear Secretary Perry:

On behalf of the 775,000 active members and retirees of the International Brotherhood of Electrical Workers (IBEW), I write to encourage the Department of Energy to exercise their authority under the Federal Power Act, 202 (c) to provide emergency cost recovery for baseload generation units that provide grid reliability and resiliency to the electric grid. Many of the baseload generation units that provide grid stability and reduce voltage fluctuations will be impacted by the forced early retirement of these units.

The IBEW represents workers employed in a variety of fields directly and indirectly related to power generation and the electric grid. Our experience spans over 125 years. We are the best trained, most professional workforce in the electrical industry.

Electrical grid voltage must be maintained 24 hours a day, seven days a week. The grid must balance consumption and production at all times; any significant imbalance could cause grid instability or severe voltage fluctuations, and cause failures within the grid. While other sources of energy provide electrical energy they simply do not provide the same type of security and resiliency that baseload power plants do. That is because these baseload units have on-site fuel supplies to ensure these plants can withstand disturbances such as severe weather, interruptible fuel contracts, attacks on infrastructure, or other catastrophic events that upset fuel delivery.

Baseload generation provided the most resilient form of generation during the most recent cold spell in the northeast (Bomb Cyclone), according to the DOE's National Energy Technology Laboratory (NETL) report analyzing the resilience of different electricity resources. The reliability and resiliency provided by baseload generation does come with a price and maintaining this reliability will require an emergency order on behalf of the Department of Energy.

INTERNATIONAL
BROTHERHOOD
OF ELECTRICAL
WORKERS®

The Honorable Rick Perry
April 11, 2018
Page 2

This emergency order under the FPA, Section 202 (c) is necessary to assure that when a customer expects the grid to provide reliable power for their business or home the local utility can provide that service 24 hours a day and 7 days a week. On behalf of the IBEW, I encourage the Department of Energy to move forward with an emergency order to provide cost recovery to the baseload generation units providing that service.

Sincerely yours,

A handwritten signature in cursive script that reads "Lonnie R. Stephenson".

NUCLEAR ENERGY INSTITUTE

Document 43

April 11, 2018

The Honorable Rick Perry
Secretary of Energy
U.S. Department of Energy
1000 Independence Avenue, SW
Washington, DC 20585

Dear Mr. Secretary:

Our nation's nuclear power plants deliver benefits that go far beyond a reliable and resilient electrical grid. Nuclear energy contributes to a strong economy, a cleaner environment, and national security. Yet today we are at risk of losing much of what nuclear energy delivers.

FirstEnergy Solutions has announced plans to shut down several electricity generation facilities, including four nuclear reactors at three sites – two reactors each in Ohio and Pennsylvania.¹ These four reactors join eight others that have already announced plans to shut down, and another six that have permanently closed over the past five years. The announcement of these additional nuclear retirements is further proof that the industry has reached an inflection point in the debate over market reforms to recognize the value of the nation's largest and most resilient source of emissions-free energy. The simple fact is that nuclear energy's many benefits are not being recognized by the markets in which they operate. We are therefore writing to request that immediate action be taken to prevent the closure of these four nuclear power reactors and to more fully recognize the benefits that nuclear energy delivers to our nation.

As demonstrated by the recent announcement that Exelon's Three Mile Island reactor will prematurely shut down in September 2019², once a deactivation decision is made, the plant owner ceases investment in capital investments, including fuel. Moreover, refueling outages must be planned a year in advance. Thus, in the case of TMI and the FirstEnergy Solutions plants, without urgent action, it will be too late to reverse these decisions and allow for continued operation.

Nuclear energy accounts for nearly 20 percent of the electricity generated in the United States. And regardless of what you value in our electricity system, nuclear energy delivers. Our nation's 99 nuclear power reactors have an unmatched combination of attributes that are central to a clean, modern electrical grid, but that are under-valued or not valued at all in most electricity markets.

For example, if you value system resilience and low electricity prices, you should value that nuclear plants operate around the clock for up to two years between refuelings, providing valuable fuel security,

¹ See <https://www.fes.com/content/fes/home/restructuring.html>

² <http://www.exeloncorp.com/newsroom/exelon-to-retire-three-mile-island-generating-station-in-2019>

NUCLEAR. CLEAN AIR ENERGY

reliability and price stability to our electricity markets. Losing these and other nuclear power reactors would imperil the resilience of the grid and drive up costs to consumers. A recent Department of Energy study³ showed the PJM electricity system was heavily reliant on these and other economically challenged plants to provide generation during the bomb cyclone event this winter. Even with these plants helping to provide power, electricity prices soared above \$200 per megawatt hour as natural gas prices spiked. Managing severe cold weather events without these nuclear plants will be costlier as the system becomes increasingly dependent on generation that depends on “just-in-time” fuel deliveries and lacks firm fuel supply capabilities.

In addition, multiple studies have made clear that when nuclear plants shut down, electricity prices rise – even under normal weather conditions. For example, the Brattle Group⁴ found that New York would save customers a billion dollars a year by acting to preserve nuclear plants. Providing financial support for nuclear power plants facing premature closure decisions will cost consumers far less than any of the alternatives.

If you value clean electricity generation, you should value nuclear energy as our nation’s single-largest source of carbon-free generation, representing nearly 60 percent of all zero-carbon electricity. In addition, nuclear energy generation emits no sulfur dioxide, nitrogen oxides, mercury, and particulate emissions. The four nuclear reactors announced for closure generated more non-emitting electricity last year than all of the wind and all of the solar produced in PJM combined. If these reactors close, carbon emissions will increase over 20 million metric tons, the equivalent of putting over 4 million additional cars on the road. It simply won’t be feasible to replace all or even most of the lost clean energy generation with renewables; the increased fossil fuel generation that would replace the lost nuclear generation would wipe out more than 25 years of progress toward a cleaner electricity system.

If you value national security and global influence, you should be concerned that the U.S. leads the world in nuclear energy generation, but has seen its civil nuclear leadership erode as Russia and China have captured an increasing share of the global market.⁵ For several decades, our strong domestic nuclear industry has helped the U.S. enforce the world’s highest standards for nuclear safety and nonproliferation. American influence is strengthened through the century-long relationships built when the U.S. engages in nuclear commerce with another nation, and other nations seek us out as commercial partners in part because we operate the safest and most efficient nuclear power plants in the world. Unfortunately, other nations will be increasingly less likely to look to the U.S. for nuclear products and services if we let our operating nuclear fleet continue to shrink.⁶

And finally, if you value well-paying, long-term jobs, you should know that losing these and other reactors would have dire consequences for the communities that host the plants. For example, closure would mean the loss of over 3,000 full-time jobs for the Ohio and Pennsylvania employees who work at the four plants, as well as thousands more jobs in the surrounding communities that are supported by their economic activity. This translates into the loss of millions of dollars in taxes and negative impacts

Page 3

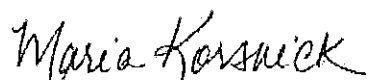

to the GDP of each state. The economic hardships faced by other communities where nuclear plants have already shut down should both alarm and motivate state and national leaders to act.

The announcement by FirstEnergy Solutions demonstrates the urgency for federal policymakers to act in markets where nuclear energy is undervalued. All appropriate options should be explored to prevent the premature closure of nuclear plants and preserve the nuclear energy option. It is past time for the federal government to ensure proper valuation of nuclear energy's many attributes in electricity markets and to take other measures to preserve nuclear energy for our nation's future.

As the trade association for the nation's largest source of emissions-free energy, NEI urges policymakers to pursue long-term sustainable reforms to market rules that will correct widely acknowledged flaws that unfairly disadvantage nuclear plants, without interfering with state planning processes and regions (such as MISO) where federal markets are functioning. We have advocated in prior comments to FERC for "cost-of-service compensation for nuclear generation units, at least until other market structures are put in place that appropriately value the resiliency attributes that nuclear generation units provide."⁷ Accordingly, a Section 202(c) remedy for nuclear resources that are facing premature retirement can provide a necessary bridge before longer-term reforms can be enacted. In developing longer-term reforms, federal policymakers should consider narrowly tailored action, including supportive tax policies (including expanded production tax credits and investment tax credits), inclusion of nuclear energy in federal energy procurement goals and mandates, market design changes that allow all resources to set price, and recognition of nuclear energy's non-emitting attributes consistent with recognition provided to other non-emitting resources. The policy tools discussed above have long been used to support other components of our nation's "all of the above" energy portfolio; policymakers should now do the same for nuclear energy. And when considering these policies, we encourage you to work closely with states and FERC to ensure that any federal proposal makes sense for energy producers and consumers throughout the nation.

There is still time for policymakers to act. Leaders in New York and Illinois crafted solutions that recognize the contribution the states' nuclear plants make to maintaining clean air for their citizenry. The state of Connecticut has also acted to level the playing field for all sources of clean energy, including nuclear, to support the state's electricity needs. Federal policymakers should avoid interfering with these state programs which, like renewable portfolio standards, protect a valuable state interest in protecting the environment. But while state policy actions have been essential in preserving nuclear assets, it is imperative that federal policymakers assure federal policies appropriately value nuclear energy's attributes, to ensure it continues making important contributions to America's energy, environmental, national security and economic interests.

Sincerely yours,

Maria Korsnick

Re: U.S. Manufacturers Urge Denial of the Request for Emergency Order Filed by FirstEnergy Solutions Corp.
under Section 202(c) of the Federal Power Act

Dear Mr. President:

ELCON, the national association of large industrial consumers of electricity, respectfully requests that the Administration reject FirstEnergy's Section 202(c) request and decline to take other federal action to interfere with retiring power plants. Such action would be unnecessarily anti-competitive and would increase the price of electricity to businesses and consumers, resulting in a substantial loss of U.S. manufacturing capacity and jobs. No one has a greater interest in reliable electricity supply than the industrial consumers whose operations depend on it, but there is no emergency that requires federal response.

The historically low electricity prices that have resulted from the markets' operation have substantially benefited the competitiveness of U.S. manufacturers, benefits that would be lost if they were forced to pay billions in additional payments to the owners of uneconomic coal and nuclear power plants. The retirement of uneconomic plants represents a normal, efficient functioning of competitive markets and has been ongoing for decades. In fact no market operator has requested federal action on behalf of closing plants, even when they acknowledge, such as PJM, that diversity in electricity sources merits further attention.

The circumstances that would trigger Section 202(c) or other federal action simply are not present. A 2017 DOE Staff Report concludes: "while markets have evolved since their introduction, they are currently functioning as designed—to ensure reliability and minimize the short-term costs of wholesale electricity—despite pressures." NERC's CEO stated that "the state of reliability in North America remains strong, and the trend line shows continuing improvement year over year". FERC also relied on "extensive comments" from PJM and other system operators which identified no "past or planned generator retirements that may be a threat to grid resilience." The cost of honoring requests by coal and nuclear interests will be borne by consumers, even though retirements like those with FES are years away and even though the DOE regulations clearly state that "economic factors relating to service . . . generally will not be considered as emergencies unless the inability to supply electric service is imminent."

The government cannot attempt to pick winners and losers and must certainly not treat U.S. manufacturing jobs as inferior to those at uneconomic power plants. Allocation of resources should be left to the competitive markets.

Most Respectfully,

A handwritten signature in black ink, appearing to read "John P. Hughes".

(202) 628-8200

April 12, 2018

President Donald J. Trump
The White House
Washington, D.C. 20500

Dear Mr. President:

This letter is prompted by the unprecedented and unjustified request for an "emergency order" under Federal Power Act Section 202(c) from FirstEnergy Solutions (FES). The Electric Power Supply Association (EPSA) appreciates that your Administration is taking the time to carefully review this request given the widespread negative ramifications were it to be granted, or other steps taken to disadvantage FES's competitors and the businesses and consumers reliably served by them. There is simply no emergency.

EPSA members are independent power producers that compete with utility-affiliated entities such as FES to generate electricity. The PJM regional grid that would be negatively impacted by the 202(c) request, or other forms of intervention, is the largest in the country and where most EPSA assets are located. EPSA members own far more generation in PJM than FES, primarily through members' coal and natural gas plants.

EPSA joined in a recent filing submitted to the U.S. Department of Energy (DOE) asking for public comment on the FES application and pointing out its legal flaws. EPSA writes to you today because granting the FES request, or providing other forms of assistance to a subset of competitors, is fundamentally at odds with the wise course you have charted for our country. This includes your goals for robust economic growth, improving U.S. competitiveness, and modernizing infrastructure including the power grid.

Electricity is a major input cost for manufacturers, small businesses and households. Under your leadership, U.S. domestic energy is bringing tangible economic benefits through abundant energy supplies at affordable prices. Measures such as 202(c) orders, or other steps to place thumbs on the scale, would needlessly raise electricity costs by billions of dollars annually. This is why DOE has heard from so many who represent the 65 million customers in the PJM region that would be adversely affected.

Since all electricity suppliers face the challenges of current market conditions and the ongoing exciting transformation of how electricity is produced and consumed, federal and state policies should be pursued on a fuel neutral basis to best serve consumers.

Sincerely,

A handwritten signature in black ink, appearing to read "John E. Shelk", written over a horizontal line.

EAST BRUNSWICK

PHILADELPHIA

WILMINGTON

WASHINGTON, DC

Dear Secretary Perry, Assistant Secretary Walker and Deputy Assistant Secretary Jereza:

Attached is North Carolina Electric Membership Corporation's ("NCEMC") Motion to Intervene, Protest and Consultative Comments in the proceeding concerning FirstEnergy Solutions Corporation's Request for Emergency Action Under Section 202(c) of the Federal Power Act. NCEMC is a Generation and Transmission ("G&T") rural electric cooperative, and a participant in the electric markets operated by PJM Interconnection, LLC. It also is a user of critical electric infrastructure within the United States. NCEMC opposes FES' request for emergency action because there is no emergency and no justification for the relief requested. If the Request is not denied outright, the Department should provide all interested parties 60 days to submit comments, as requested by the Electric Power

cc: Official Service List

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

Request For Emergency Order)
Pursuant To Federal Power Act Section)
202(c) By FirstEnergy Solutions Corp.) **DOE Docket No. _____**

**MOTION TO INTERVENE, PROTEST AND CONSULTATIVE COMMENTS OF
NORTH CAROLINA ELECTRIC MEMBERSHIP CORPORATION**

The North Carolina Electric Membership Corporation (“NCEMC”), pursuant to Rules 211, 212 and 214 of the Federal Energy Regulatory Commission (“FERC”) Rules of Practice and Procedure, 18 C.F.R. § 211, 212 and 214 (2018), and the United States Department of Energy’s (“the Department”) regulations, 10 C.F.R. §205.383,¹ submits this Motion to Intervene, Protest and Consultative Comments in the above-captioned proceeding. NCEMC protests the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) submitted by FirstEnergy Solutions Corporation (“FES”) in this matter.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES submitted a letter (“Request”) to Energy Secretary James Richard Perry requesting that the Secretary invoke emergency authority under Section 202(c) of the Federal Power Act (“FPA”), 16 U.S.C. § 824a, to find that an emergency condition exists in the PJM Interconnection, LLC (“PJM”) region that requires immediate action by the Department.

¹ Federal Power Act Section 202(c) and the Department’s policy and regulations provide that FERC’s Rules of Practice and Procedure should be used for procedural guidance in Emergency Order proceedings. Guidance published on the Department’s website points to the Commission’s rules in situations where the Department’s regulations at 10 C.F.R. § 205.370, *et. seq.*, are silent. *See, e.g.*, DOE Answer to Procedural Questions Concerning Reharing of DOE Order, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 30, 2005) at 2. The plain language of Section 202(c)(5) of the Federal Power Act, enacted in 2016, reinforces this principle. The FES Request is a proceeding under Chapter 12 of the Federal Power Act, and the Commission’s Rules of Practice and Procedure apply. *See* 16 U.S. Code § 825g(b) [FPA Section 308] (“All hearings, investigations, and proceedings under this chapter shall be governed by rules of practice and procedure to be adopted by the Commission.”).

FES requested that the Secretary order PJM to enter into contracts with “certain existing nuclear and coal-fired generators” located in PJM for the supply of energy, capacity, and ancillary services in order to “maintain the stability of the electric grid.”² FES also requests that the Secretary order PJM to “promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide.”³ In the event PJM and the owners of the resources are unable to reach agreement regarding compensation and other contractual terms, FES requests that “the Secretary step in and determine the just and reasonable compensation and conditions.”⁴

III. MOTION TO INTERVENE

NCEMC is a generation and transmission cooperative responsible for the full or partial power supply requirements of its 25 members throughout the state of North Carolina. As such, it is a user of critical electric infrastructure within the United States, within the meaning of 10 C.F.R. §205.383 (a)(5). NCEMC’s 25 distribution cooperatives supply electricity to approximately 1 million homes, farms, and businesses in which more than 2.5 million North

² Request at 1.

³ *Id.*

⁴ Request at 31-32.

Carolínians live and work. NCEMC's distribution cooperative loads are located throughout the service areas of three investor-owned public utilities: Duke Energy Carolinas, LLC and Duke Energy Progress, LLC, both subsidiaries of Duke Energy Corporation, and Virginia Electric and Power Company, doing business as Dominion Virginia Power in Virginia and as Dominion North Carolina Power in North Carolina (hereinafter referred to collectively as "Dominion").

NCEMC is a member of PJM, which operates the transmission systems of several electric utilities, including the transmission facilities owned by Dominion. NCEMC purchases transmission services from PJM over Dominion's transmission facilities to serve the loads of its six member cooperatives that distribute power at retail in the Dominion transmission zone of the PJM region. NCEMC also participates in PJM's energy, ancillary services and capacity markets.

The Department's ruling in this matter may have a significant and adverse effect on the rates paid by NCEMC for wholesale supplies it purchases to serve its member distribution cooperatives and their retail consumers in PJM. The cost of the payments envisioned in FES' Request that are to be provided to the coal and nuclear generating facilities in PJM likely would be recovered from load-serving entities in the PJM region, including NCEMC. As a current PJM Member, a transmission customer in PJM's Dominion Zone, and a participant in PJM's capacity, energy and ancillary services markets, NCEMC has an interest that may be directly affected by the outcome of this proceeding. This interest cannot be adequately represented by any other party, and NCEMC's participation in this case is necessary to adequately protect its interests. NCEMC should be permitted to intervene as its participation would serve the public interest.

IV. PROTEST AND CONSULTATIVE COMMENTS

NCEMC opposes FES' Request because there is no emergency in the PJM region, and no justification for the relief requested. If the Department decides not to reject the Request outright,

it should provide an opportunity for the filing of detailed comments by entities that could be affected by the Department's ruling on this matter. NCEMC reserves the right to supplement this preliminary pleading to explain in detail why granting the Request would result in unjust, unreasonable and unduly discriminatory rates for its North Carolina customers.

V. CONCLUSION

For the foregoing reasons, NCEMC requests that it be permitted to intervene and participate in this proceeding as a PJM market participant and a user of critical electric infrastructure within the United States. If the Department does not reject the FES Request outright, The Department should provide interested parties, by notice published in the Federal Register, 60 days to file comments on the Request.

Re: Grid Resiliency Pricing Rule
FERC Docket No. RM18-1-000

COMMENTS OF THE BUILDING LABORERS' LOCAL 310 IN SUPPORT OF THE PROPOSED RESILIENCY RULE

On September 28, 2017, the Department of Energy ("DOE") issued the "Grid Resiliency Pricing Rule" (the "Proposal") directing the Federal Energy Regulatory Commission ("FERC") to adopt a rule requiring operators of organized markets to "ensure that certain reliability and resiliency attributes of electric generation sources are fully valued." Such a rule, as contemplated by the regulatory language of the Proposal, will ensure that existing nuclear and coal-fired electric generating stations in Ohio will be compensated appropriately and fully for their costs of operation and will avoid premature retirement. Adoption of that rule will thus sustain the long-term viability of critical power plants, preserve and create jobs, maintain electric reliability, and provide substantial economic benefits to the many hard-working Americans living throughout the region.

The Building Laborers' Local 310 strongly supports the Proposal and shares the Secretary's urgency that FERC act promptly to direct operators of organized markets to issue the requested rule. FERC has the ability to act, and must act, without undue delay to avoid premature closure of crucial power plants and our members' loss of critical economic and reliability benefits. FERC has thoroughly examined how electric markets function and how those markets affect the continued operation of crucial power plants needed for reliability for some time. FERC has the requisite basis to act now. There is no

time for delay. In addition to acting promptly, FERC should also direct organized market operators to issue a comprehensive and enduring set of rules, based on the regulatory language of the Proposal, for the proper compensation of critical power plants. Protracted proceedings undertaken by organized market operators that fail to develop fair, compensatory and transparent rules will only engender market uncertainty and delay in providing sufficient compensation to these facilities, thereby jeopardizing the operation of the very plants that the DOE seeks to maintain in operation.

II. DESCRIPTION OF BUILDING LABORERS' LOCAL 310

Labor Union – Building Construction

III. DESCRIPTION OF BUILDING LABORERS' LOCAL 310'S INTEREST IN PROCEEDING

The Building Laborers' Local 310 is a party to a collective bargaining agreement with the owners of baseload coal and nuclear power plants located in Cuyahoga, Lake and Geauga Counties of Ohio. Our members work on major infrastructure and industrial development projects that are dependent on the continued operation of the baseload coal and nuclear power plants. As a result, the wages, terms and conditions of employment of its members may be directly affected by the actions taken by the FERC and operators of organized markets in this proceeding. Thus, the Building Laborers' Local 310 members have a direct and substantial interest in this proceeding. As well, the unique perspective of the Building Laborers' Local 310 and its members will only serve to enhance the record in this proceeding.

IV. COMMENTS

The communities where struggling baseload coal and nuclear power plants are located are dependent on the jobs and economic development opportunities the power plants provide. The recent decline in Ohio electric power industry, for example, has led to reductions in operations and capital improvement expenditures at numerous power production and manufacturing facilities across Ohio. This has led to extreme hardship for the thousands of union workers employed in this industry as well as their families.

It is imperative that baseload coal and nuclear plants continue to operate in light of these dire circumstances. Baseload coal and nuclear plants in Ohio provide thousands of MWs of reliable power, and provide union jobs and economic opportunities to Building Laborers' Local 310 members.

Building Laborers' Local #310 sends workers to both the Davis-Besse and Perry Nuclear Power Plants. These Power Plants employ approximately 1,400 people. These Power Plants have a temporary shutdown every 24 months in order to replace some of their fuel and to conduct routine maintenance and safety inspections. These outages can last anywhere from four to six weeks and requires the Power Plants to hire additional contract workers which includes members of Building Laborers' Local 310. This highly skilled workforce requires boilermakers, electricians, iron workers, pipefitters and various other craft personnel to work around the clock to complete the work safely and efficiently. These jobs with overtime, pay wages far above the prevailing incomes of their respective communities. Also, in total, outside contractors, workers and plant personnel contribute nearly \$25 million combined each year in state and local taxes to support schools, police and fire departments and other vital public services. The loss of jobs, tax revenue, and the ripple effect of such losses throughout the local economy, will have a severely detrimental impact on the region.

The issuance of a rule preserving the continued operation of resilient baseload coal and nuclear power plants will maintain a reliable supply of electricity for the region's energy-intensive economy in two ways. First, the preservation of certain plants will avoid the need to replace lost generation with

imports and the associated construction of infrastructure to facilitate such importation. Preserving baseload coal and nuclear power plants will keep these needed, reliable facilities running close to home without the need to depend on distant resources, particularly during catastrophic events like severe storms, to fulfill our region's dynamic need for reliable electricity.

Second, premature plant closures will deplete the stable of highly skilled (and specifically trained and experienced) employees, many of whom have lived in the region for several years and who take great pride in their work. With a depletion of this skilled and experienced group of workers, and the possible replacement of these workers with more distant and perhaps less-skilled individuals, we will see a direct and adverse impact on our ability to maintain the generation facilities that continue to operate and, as important, our ability to respond promptly to severe contingencies affecting the operation of these remaining plants in operation. In short, allowing baseload coal and nuclear power plants to close prematurely will have an adverse impact on the reliability of the region's electricity supply and on the reliable operation of the regional electricity system.

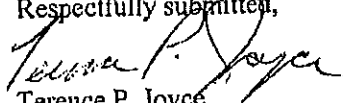

Rates for the sale of electricity that are inadequate to sustain the operation of base load generation facilities that provide reliability and resiliency support cannot be considered to be just and reasonable. Because of the loss of jobs, the significant reduction in payments to local governments, and the decline in electricity resource and grid reliability that would result from deactivation of the nuclear and coal-fired generating facilities in Ohio, it is essential that the FERC adopt a rule, such as that proposed by DOE, which will ensure that such generating facilities are fully compensated for their costs and will remain in operation.

In order to mitigate the risk that such generating units may be deactivated prematurely, the Building Laborers' Local 310 strongly urges FERC to adopt the rule proposed by the DOE as promptly and comprehensively as possible. FERC has a sufficient record to act that will be further bolstered by the comments considered in this proceeding. FERC has thoroughly considered the impact of electric markets on the sustained operation of at-risk power plants and, as noted by the Secretary of the DOE, the

time to act is now given the severe impacts to system reliability and resilience, and national security, attendant to the premature closure of crucial power plants. Any protracted delay in creating fully compensatory market rules will only exacerbate the problem of pre-mature closures.

In acting promptly, FERC should also direct the organized market operators to issue a rule that is not only compensatory (and based on the regulatory language of the Proposal) but comprehensive and enduring. The rules to be issued by operators of organized markets should be fair and transparent, and should ensure that critical power plants can continue to operate for the long-term and without the prospect of repeated re-examination and adjustment to their market compensation. The uncertainty that less than comprehensive and enduring market rules will engender will defeat the very purpose of preserving the extended operation of these much-needed power plants.

Respectfully submitted,

Terence P. Joyce

For your convenience, I have attached a letter dated May 12, 2017 addressed to Secretary Perry and a letter dated October 16, 2017 addressed to the Federal Energy Regulatory Commission expressing our concerns on the importance of baseloaded generation. As you are aware once these plants are closed they are closed for good. The dedicated highly skilled workforce, the lifeblood of their communities will also be gone along with the strong tax base they provide.

It is my belief you will be receiving comments from many interests outside of the communities these plants support. Interests that will not have to worry about the crippling effect of the loss of highly skilled and good paying jobs.

Thank you in advance for taking the time to review my letters.

International Brotherhood of Electrical Workers

LOCAL UNION No. 245

705 LIME CITY ROAD

ROSSFORD, OHIO 43460

May 12, 2017

Dear Secretary Perry,

Unions, labor and power plant workers across the country applaud the Department of Energy's study examining electricity markets, the value of baseload power and the long-term security and resiliency of the electric grid. Baseload coal and nuclear power plants employ more than 154,000 workers, produce major infrastructure projects that put Americans to work, and support a resilient electric grid.

Baseload power plants have long been the "work horses" of the electric system, providing energy to customers 24 hours a day, 365 days a year. With significant on-site fuel reserves, they provide the resiliency required to keep electricity flowing under all circumstances since their operation is not subject to interruption by extreme events such as weather or attacks on infrastructure that disrupt fuel delivery to other generation resources. Recently, EPA Administrator Pruitt noted as much when he talked about the consequences of an attack on key infrastructure. Our nation's security is dependent on maintaining these plants to support a resilient supply of electricity.

However, numerous baseload power plants have permanently shut down in recent years, and many more are expected to close prematurely in the very near future. Once they are gone, they are gone for good. Baseload generation is under serious threat from market-distorting subsidies and mandates, regulations that target these resources, low natural gas prices and markets that don't value resiliency. We are at a crisis point. Further decline in the number of plants will not only impact the grid and national security, it will cost valuable jobs and discourage industrial development opportunities nationwide. This is an outcome America simply can't afford.

Our baseload power plants and the dedicated, skilled workers who operate them are the lifeblood of their communities. They deliver a strong tax base and support between three and eight times more high-paying jobs than do other forms of electricity generation. We depend on these plants to create a robust workforce, and the country depends on them to support a healthy economy and electricity supply.

Unless action is taken, the long-term viability of baseload power plants along with the jobs and substantial economic opportunities they bring is at risk. And, our national security could be compromised if we don't ensure a resilient grid. We encourage the Administration to take prompt and meaningful action to protect baseload power plants and America's energy future.

Sincerely,

A handwritten signature in black ink, appearing to read "Larry Tscheme".

Re: Grid Resiliency Pricing Rule
FERC Docket No. RM18-1-000

COMMENTS OF THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL UNION 245 IN SUPPORT OF THE PROPOSED RESILIENCY RULE

On September 28, 2017, the Department of Energy ("DOE") issued the "Grid Resiliency Pricing Rule" (the "Proposal") directing the Federal Energy Regulatory Commission ("FERC") to adopt a rule requiring operators of organized markets to "ensure that certain reliability and resiliency attributes of electric generation sources are fully valued." Such a rule, as contemplated by the regulatory language of the Proposal, will ensure that existing nuclear and coal-fired electric generating stations in Ohio will be compensated appropriately and fully for their costs of operation and will avoid premature retirement. Adoption of that rule will thus sustain the long-term viability of critical power plants, preserve and create jobs, maintain electric reliability, and provide substantial economic benefits to the many hard-working Americans living throughout the region.

IBEW Local 245 strongly supports the Proposal and shares the Secretary's urgency that FERC act promptly to direct operators of organized markets to issue the requested rule. FERC has the ability to act, and must act, without undue delay to avoid premature closure of crucial power plants and our members' loss of critical economic and reliability benefits. FERC has thoroughly

examined how electric markets function and how those markets affect the continued operation of crucial power plants needed for reliability for some time. FERC has the requisite basis to act now. There is no time for delay. In addition to acting promptly, FERC should also direct organized market operators to issue a comprehensive and enduring set of rules, based on the regulatory language of the Proposal, for the proper compensation of critical power plants. Protracted proceedings undertaken by organized market operators that fail to develop fair, compensatory and transparent rules will only engender market uncertainty and delay in providing sufficient compensation to these facilities, thereby jeopardizing the operation of the very plants that the DOE seeks to maintain in operation.

I. COMMUNICATIONS

All communications, correspondence, and documents related to this proceeding should be directed to the following person:

II. DESCRIPTION OF IBEW LOCAL 245

IBEW Local 245 is a progressive labor organization that represents individuals in the Utility, Generation, Construction, Government and Communications industries.

III. DESCRIPTION OF IBEW LOCAL 245'S INTEREST IN PROCEEDING

IBEW Local 245 is a party to a collective bargaining agreement with the owners of baseload coal and nuclear power plants located in Ohio. In addition to working in these plants, our members work on major infrastructure and industrial development projects that are dependent on the continued operation of the baseload coal and nuclear power plants. As a result, the wages, terms

and conditions of employment of its members may be directly affected by the actions taken by the FERC and operators of organized markets in this proceeding. Thus, IBEW Local 245 members have a direct and substantial interest in this proceeding. As well, the unique perspective of IBEW Local 245 and its members will only serve to enhance the record in this proceeding.

IV. COMMENTS

The communities where struggling baseload coal and nuclear power plants are located are dependent on the jobs and economic development opportunities the power plants provide. The recent decline in Ohio's electric power industry, for example, has led to reductions in operations and capital improvement expenditures at numerous power production and manufacturing facilities across Ohio. This has led to extreme hardship for the thousands of union workers and nonunion workers employed in this industry as well as their families.

It is imperative that baseload coal and nuclear plants continue to operate in light of these dire circumstances. Baseload coal and nuclear plants in Ohio provide thousands of MWs of reliable power, and provide many union jobs and economic opportunities to IBEW Local 245 members. The Davis Besse and Bayshore generation stations directly employ approximately 240 IBEW Local 245 members, and the maintenance and capital improvement work on these plants supports the local economy by creating thousands of well-paying union jobs for contractors. In addition, these plants contribute millions each year in state and local tax revenues that support local schools, police and fire departments and other vital public services. The loss of jobs, tax revenue, and the ripple effect of such losses throughout the local economy, will have a severely detrimental impact on the region.

The issuance of a rule preserving the continued operation of resilient baseload coal and nuclear power plants will maintain a reliable supply of electricity for the region's energy-intensive

economy in two ways. First, the preservation of certain plants will avoid the need to replace lost generation with imports and the associated construction of infrastructure to facilitate such importation. Preserving baseload coal and nuclear power plants will keep these needed, reliable facilities running close to home without the need to depend on distant resources, particularly during catastrophic events like severe storms, to fulfill our region's dynamic need for reliable electricity.

Second, premature plant closures will deplete the stable of highly skilled (and specifically trained and experienced) employees, many of whom have lived in the region for several years and who take great pride in their work. With a depletion of this skilled and experienced group of workers, and the possible replacement of these workers with more distant and perhaps less-skilled individuals, we will see a direct and adverse impact on our ability to maintain the generation facilities that continue to operate and, as important, our ability to respond promptly to severe contingencies affecting the operation of these remaining plants in operation. In short, allowing baseload coal and nuclear power plants to close prematurely will have an adverse impact on the reliability of the region's electricity supply and on the reliable operation of the regional electricity system.

Rates for the sale of electricity that are inadequate to sustain the operation of base load generation facilities that provide reliability and resiliency support cannot be considered to be just and reasonable. Because of the loss of jobs, the significant reduction in payments to local governments, and the decline in electricity resource and grid reliability that would result from deactivation of the nuclear and coal-fired generating facilities in Ohio, it is essential that the FERC adopt a rule, such as that proposed by DOE, which will ensure that such generating facilities are fully compensated for their costs and will remain in operation.

In order to mitigate the risk that such generating units may be deactivated prematurely, IBEW Local 245 strongly urges FERC to adopt the rule proposed by the DOE as promptly and comprehensively as possible. FERC has a sufficient record to act that will be further bolstered by the comments considered in this proceeding. FERC has thoroughly considered the impact of electric markets on the sustained operation of at-risk power plants and, as noted by the Secretary of the DOE, the time to act is now given the severe impacts to system reliability and resilience, and national security, attendant to the premature closure of crucial power plants. Any protracted delay in creating fully compensatory market rules will only exacerbate the problem of pre-mature closures.

In acting promptly, FERC should also direct the organized market operators to issue a rule that is not only compensatory (and based on the regulatory language of the Proposal) but comprehensive and enduring. The rules to be issued by operators of organized markets should be fair and transparent, and should ensure that critical power plants can continue to operate for the long-term and without the prospect of repeated re-examination and adjustment to their market compensation. The uncertainty that less than comprehensive and enduring market rules will engender will defeat the very purpose of preserving the extended operation of these much-needed power plants.

Respectfully submitted,

Larry Tscherne

Subject: Comment for nuclear energy issue
Date: Friday, April 13, 2018 12:51:31 PM

Document 49

Dear Secretary Perry,

Local 777 of the International Brotherhood of Electrical Workers ("Local 777") submits this comment to support the use of Section 202(c) of the Federal Power Act, 16 U.S.C. § 824a(c), or other appropriate legal authority, to ensure that the nation's baseload nuclear power plants remain in operation.

Local 777 is the authorized collective bargaining representative for more than 300 of the 700 people who work at Three Mile Island Unit 1 ("TMI 1") in Middletown, PA. TMI 1 is a nuclear power plant with an electric generating capacity of 803 megawatts. The plant is licensed to operate by the Nuclear Regulatory Commission until 2034. Unfortunately, given the economics of the power markets under the existing pricing and resiliency policies of the Federal Energy Regulatory Commission ("FERC") and the PJM Interconnection (the Regional Transmission Organization overseeing the pricing and dispatch of TMI 1), TMI 1 is scheduled to cease operations in September 2019 -- 15 years ahead of schedule.

Moreover, the plant is not subject to temporary disruptions in fuel supplies due to inclement weather, natural disasters, or other events. As is the case for most nuclear reactors, TMI 1 needs to refuel only once every two years. Between refueling outages, the reactor does not require any access to outside fuel supplies. TMI 1's most recent refueling outage ended on October 13, 2017, meaning that the plant is expected to run continuously until its expected permanent shut down on September 30, 2019.

Perhaps most importantly, nuclear power is vitally important in moving the United States and the world toward a sustainable climate. Diverse organizations such as the Union of Concerned Scientists (Nuclear Power & Global Warming, <https://www.ucsusa.org/nuclear-power/nuclear-power-and-global-warming#.WtDFHS7waM8>) and Environmental Defense Fund (John Finnigan, Why We Still Need America's Nuclear Power Plants — At Least for Now, Environmental Defense Fund, <http://blogs.edf.org/energyexchange/2017/04/17/why-we-still-need-americas-nuclear-power-plants-at-least-for-now/>); U.S. Senators from both political parties (Lamar Alexander and Sheldon Whitehouse, To Slow Global Warming, We Need Nuclear Power, The New York Times, Dec. 21, 2016); and many other policymakers and scientists recognize that nuclear power must be part of our energy future, at least for the next decade or more.

In fact, a 2013 report in Scientific American concluded that nuclear power must be part of our response to global climate change, stating:

"U.S. reactors have also been staving off another global challenge: climate change. The low-carbon electricity produced by such reactors provides 20 percent of the nation's power and, by the estimates of climate scientist James Hansen of Columbia University, avoided 64 billion metric tons of greenhouse gas pollution. They also avoided spewing soot and other air pollution like coal-fired power plants do and thus have saved some 1.8 million lives.

"And that's why Hansen, among others, such as former Secretary of Energy Steven Chu, thinks that nuclear power is a key energy technology to fend off catastrophic climate change.

...

"Indeed, he has evidence: the speediest drop in greenhouse gas pollution on record occurred in France in the 1970s and '80s, when that country transitioned from burning fossil fuels to nuclear fission for electricity, lowering its greenhouse emissions by roughly 2 percent per year. The world needs to drop its global warming pollution by 6 percent annually to avoid "dangerous" climate change in the estimation of Hansen and his co-authors in a recent paper in PLoS One. "On a global scale, it's hard to see how we could conceivably accomplish this without nuclear," added economist and co-author Jeffrey Sachs, director of the Earth Institute at Columbia University, where Hansen works."

(How Nuclear Power Can Stop Global Warming, Scientific American, Dec. 12, 2013, <https://www.scientificamerican.com/article/how-nuclear-power-can-stop-global-warming/>)

As you know, once a nuclear power plant closes, it is extremely difficult if not impossible to reopen it. Operating a plant requires hundreds of highly trained people. That talent pool will not be available years after a plant closes. Further, equipment within the plant will deteriorate if it is not operated and maintained. As a result, many climate scientists, environmental advocates, and energy-industry experts believe that keeping our existing nuclear plants in operation is part of a "no regrets" strategy for combating climate change.

Simply stated, as a matter of national and global security it makes no sense to shut down a zero-emissions plant 15 or 20 years before the end of its useful life. At a minimum, nuclear plants like TMI 1 should continue to operate until they can be replaced by zero-emitting alternatives. Today, and for the foreseeable future, zero-emitting options simply do not exist on the scale needed to replace even one nuclear plant like TMI (at more than 800 MW), let alone the nation's entire fleet of nuclear power plants.

As a practical matter, if TMI 1 and other nuclear plants are retired prematurely, they will be replaced by power plants fueled by natural gas. For example, according to the Energy Information Administration, there are just two new utility-scale wind projects planned for Pennsylvania, totaling 170 MW (EIA, Electric Power Monthly, Table 6.5 Planned U.S. Electric Generating Unit Additions (Mar. 23, 2018)) -- or only about 1/4 of the capacity that will be lost if TMI 1 closes prematurely. This will result in increased emissions of carbon dioxide, methane, and other greenhouse gases from new natural gas plants that are likely to exacerbate concerns with climate change.

Section 202(c) of the Federal Power Act authorizes the Federal Energy Regulatory Commission to issue an emergency order keeping certain power plants in operation "whenever the Commission determines that an emergency exists by reason of a sudden increase in the demand for electric energy, or a shortage of electric energy or of facilities for the generation or transmission of electric energy or of fuel or water for generating facilities, *or other causes*". 16 U.S.C. § 824a(c)(1) (emphasis added). We submit to you that keeping zero-emissions nuclear power plants in operation in order to avoid further harm to our climate, is just such an emergency for "other cause" that is referred to in the statute.

Thank you for your consideration.

John H Levengood

To The U.S. Department of Energy,
As President of IBEW, Local 1289, I urge you to issue an emergency order pursuant to Federal Power Act Section 202(c).
Our workers and energy grid depend on coal and nuclear plants.
I have attached my previous correspondence asking the government to take action in this matter to support our
generation plants.

Brian Kube
President
IBEW Local 1289

LOCAL UNION 1289
P.O. BOX 1690 WALL, NJ 07719

Dear Editor,

For years, the federal government has systematically attempted to dismantle a major sector of the American economy at the expense of workers and good-paying jobs. Through massive regulations placed on nuclear power and coal-fired energy, Washington has decimated an industry that would otherwise be an economic pillar for communities in New Jersey and throughout the United States.

Nuclear and coal power represent America's only two baseload energy sources. They are defined by their resiliency – ample supply, stable prices, and reliable methods of delivery. Until recently, baseload sources provided the bulk of the fuel that powers our country's electrical grid. Now, nuclear and coal-fired power plants are shutting down at an alarming rate and will continue to do so, taking more and more jobs with them, unless the government acts quickly to reverse the damage.

The Department of Energy (DOE) has proposed to do just that. If approved, a new rule would lead energy markets to properly value resilient fuels like nuclear power and coal by allowing baseload power plants to recover costs. By doing so, plants slated for retirement would be able to keep their doors open.

Before it can take effect, the new rule must be approved by the Federal Energy Regulatory Commission (FERC). Unfortunately, some have balked at the opportunity to support reliable American energy and save thousands of American jobs.

FERC needs to act quickly to approve the DOE rule and allow resilient fuels to reach their potential as a stable source of power and a major economic driver for New Jersey and the country. Our workers, and our energy grid, depend on it.

Brian Kube

Re: Grid Resiliency Pricing Rule
FERC Docket No. RM18-1-000

COMMENTS OF THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL
WORKERS, LOCAL UNION 1289 IN SUPPORT OF THE PROPOSED RESILIENCY RULE

On September 28, 2017, the Department of Energy (“DOE”) issued the “Grid Resiliency Pricing Rule” (the “Proposal”) directing the Federal Energy Regulatory Commission (“FERC”) to adopt a rule requiring operators of organized markets to “ensure that certain reliability and resiliency attributes of electric generation sources are fully valued.” Such a rule, as contemplated by the regulatory language of the Proposal, will ensure that existing nuclear and coal-fired electric generating stations in New Jersey will be compensated appropriately and fully for their costs of operation and will avoid premature retirement. Adoption of that rule will thus sustain the longterm viability of critical power plants, preserve and create jobs, maintain electric reliability, and provide substantial economic benefits to the many hard-working Americans living throughout the region.

IBEW Local 1289 strongly supports the Proposal and shares the Secretary’s urgency that FERC act promptly to direct operators of organized markets to issue the requested rule. FERC has the ability to act, and must act, without undue delay to avoid premature closure of crucial power plants and our members’ loss of critical economic and reliability benefits. FERC has thoroughly examined how electric markets function and how those markets affect the continued operation of crucial power plants needed for reliability for some time. FERC has the requisite basis to act now.

There is no time for delay. In addition to acting promptly, FERC should also direct organized market operators to issue a comprehensive and enduring set of rules, based on the regulatory language of the Proposal, for the proper compensation of critical power plants. Protracted proceedings undertaken by organized market operators that fail to develop fair, compensatory and transparent rules will only engender market uncertainty and delay in providing sufficient compensation to these facilities, thereby jeopardizing the operation of the very plants that the DOE seeks to maintain in operation.

I. COMMUNICATIONS

II. DESCRIPTION OF IBEW LOCAL 1289

IBEW Local 1289 is a progressive labor organization that represents individuals in the Utility, and Generation industries.

III. DESCRIPTION OF IBEW LOCAL 1289'S INTEREST IN PROCEEDING

IBEW Local 1289 is a party to a collective bargaining agreements with the owners of baseload coal and nuclear power plants located in Ohio, Pennsylvania and New Jersey. As a result, the wages, terms and conditions of employment of its members may be directly affected by the actions taken by the FERC and operators of organized markets in this proceeding. Thus, IBEW Local 1289

members have a direct and substantial interest in this proceeding. As well, the unique perspective of IBEW Local 1289 and its members will only serve to enhance the record in this proceeding.

IV. COMMENTS

The communities where struggling baseload coal and nuclear power plants are located are dependent on the jobs and economic development opportunities the power plants provide. The recent decline in Ohio, Pennsylvania and New Jersey's electric power industry, for example, has led to reductions in operations and capital improvement expenditures at numerous power production and manufacturing facilities across these states. This has led to extreme hardship for the thousands of union workers employed in this industry as well as their families.

It is imperative that baseload coal and nuclear plants continue to operate in light of these dire circumstances. Baseload coal and nuclear plants in these 3 states provide thousands of MWs of reliable power, and provide union jobs and economic opportunities to IBEW Local 1289 members. IBEW Local 1289 has approximately 1400 members working in both utility and generating occupations in New Jersey, specifically the Oyster Creek nuclear plant and NRG generating operations. In addition to direct labor in the generation sector, the maintenance and capital improvement work at these plants supports the local economy by creating thousands of well-paying union jobs for contractors. These plants also contribute millions each year in state and local tax revenues that support local schools, police and fire departments and other vital public services. The loss of jobs, tax revenue, and the ripple effect of such losses throughout the local economy, will have a severely detrimental impact on the region.

The issuance of a rule preserving the continued operation of resilient baseload coal and nuclear power plants will maintain a reliable supply of electricity for the region's energy-intensive economy in two ways. First, the preservation of certain plants will avoid the need to replace lost

generation with imports and the associated construction of infrastructure to facilitate such importation. Preserving baseload coal and nuclear power plants will keep these needed, reliable facilities running close to home without the need to depend on distant resources, particularly during catastrophic events like severe storms, to fulfill our region's dynamic need for reliable electricity.

Second, premature plant closures will deplete the stable of highly skilled (and specifically trained and experienced) employees, many of whom have lived in the region for several years and who take great pride in their work. With a depletion of this skilled and experienced group of workers, and the possible replacement of these workers with more distant and perhaps less-skilled individuals, we will see a direct and adverse impact on our ability to maintain the generation facilities that continue to operate and, as important, our ability to respond promptly to severe contingencies affecting the operation of these remaining plants in operation. In short, allowing baseload coal and nuclear power plants to close prematurely will have an adverse impact on the reliability of the region's electricity supply and on the reliable operation of the regional electricity system.

Rates for the sale of electricity that are inadequate to sustain the operation of base load generation facilities that provide reliability and resiliency support cannot be considered to be just and reasonable. Because of the loss of jobs, the significant reduction in payments to local governments, and the decline in electricity resource and grid reliability that would result from deactivation of the nuclear and coal-fired generating facilities in Ohio, it is essential that the FERC adopt a rule, such as that proposed by DOE, which will ensure that such generating facilities are fully compensated for their costs and will remain in operation.

In order to mitigate the risk that such generating units may be deactivated prematurely, IBEW Local 1289 strongly urges FERC to adopt the rule proposed by the DOE as promptly and

comprehensively as possible. FERC has a sufficient record to act that will be further bolstered by the comments considered in this proceeding. FERC has thoroughly considered the impact of electric markets on the sustained operation of at-risk power plants and, as noted by the Secretary of the DOE, the time to act is now given the severe impacts to system reliability and resilience, and national security, attendant to the premature closure of crucial power plants. Any protracted delay in creating fully compensatory market rules will only exacerbate the problem of pre-mature closures.

In acting promptly, FERC should also direct the organized market operators to issue a rule that is not only compensatory (and based on the regulatory language of the Proposal) but comprehensive and enduring. The rules to be issued by operators of organized markets should be fair and transparent, and should ensure that critical power plants can continue to operate for the long-term and without the prospect of repeated re-examination and adjustment to their market compensation. The uncertainty that less than comprehensive and enduring market rules will engender will defeat the very purpose of preserving the extended operation of these much-needed power plants.

Respectfully submitted,

Brian Kube

UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY

Request for Emergency Order Pursuant
To Federal Power Act Section 20(c) by
FirstEnergy Solutions Corp.

:
:
:
DOE Dkt. No. _____

**MOTION OF THE ILLINOIS INDUSTRIAL
ENERGY CONSUMERS TO INTERVENE**

The Illinois Industrial Energy Consumers ("IIEC"), by and through their counsel, hereby move to intervene in the above-captioned proceeding and protest the March 29, 2018 Request for Emergency Order Pursuant to Federal Power Act Section 202(c) by FirstEnergy Solutions Corp. ("FES"), pursuant to Rules 211 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.211 and 385.214.

I. PROCEDURAL BACKGROUND

On March 29, 2018, FES issued a letter ("Request") to the Honorable James Richard Perry, Secretary of Energy, requesting that the Secretary use emergency authority under Section 202(c) of the Federal Power Act to find that an emergency condition exists in the PJM Interconnection, L.L.C. ("PJM") territory requiring immediate intervention. Specifically, FES requests that the Secretary (a) order "certain existing nuclear and coal-fired generators . . . to enter into contracts" with PJM to generate and transmit energy, capacity and ancillary services to "maintain the stability of the electric grid" and (b) order PJM to "promptly compensate at-risk merchant nuclear and coal-fired power plants for the full benefits they provide" to energy markets and the public. FES served the Request on over 100 owners of generation, transmission or distribution assets, state public utility commissions, and others.

II. MOTION TO INTERVENE

IIEC is an ad hoc association of large consumers of electricity that have facilities located in the Illinois portion of the PJM region. IIEC members are authorized under Illinois law to purchase electric energy and capacity from suppliers other than Illinois public utilities and are participants in the regional energy and capacity markets. IIEC members include large manufacturers in the steel, cement, paper, chemical, pharmaceutical, consumer products and other industries, and large institutional consumers of electricity. If the Request is granted, cost responsibility for payments made pursuant to the Emergency Order may be recovered from consumers and market participants throughout the PJM region, including IIEC member companies. IIEC strongly opposes the Request and reserves the right to supplement this preliminary pleading to explain, in detail, why the request is unjustified and unlawful, and should not be granted.

IIEC moves for intervention under Rule 214 of the Commission's Rules of Practice and Procedure.¹ Consistent with Rule 214(b)(2), IIEC has a significant and direct interest in the outcome of

¹ Federal Power Act Section 202(c) and the Department indicate that the Federal Power Act and the Commission's Rules of Practice and Procedure should be used for potential guidance in Emergency Order proceedings. Guidance published on the Department's website points to the Commission's Rules, where DOE regulations at 10 C.F.R. § 205.370, et seq., are silent. Additionally, the Department has taken the position that the procedure for the judicial review of emergency orders under Section 202(c) of the Federal Power Act must be secured through Section 313 of that Act, 16 U.S.C. § 8251. See, e.g., Order No. 202-05-03, *District of Columbia Public Service Commission*, Docket No. EO-05-01 (December 20, 2005) at 11-13. The plain language of Section 202(c)(5) of the Federal Power Act, enacted in 2016, reinforces this principle. Where, as here, a proceeding exists under Chapter 12 of the Federal Power Act, the Commission's Rules of Practice and Procedure apply. See 16 U.S. Code § 825g(b) (FPA § 308) ("All hearings, investigations, and proceedings, under this chapter shall be governed by rules of practice and procedure to be adopted by the Commission.").

this proceeding. Further, as an organization representing many of the largest electric consumers in the Illinois portion of PJM, IIEC's participation is in the public interest.

III. SERVICE OF DOCUMENTS

The following persons are designated by IIEC to receive service and communications on its behalf with regard to this proceeding:

Eric Robertson
Ryan Robertson
Lueders, Robertson & Konzen, LLC
1939 Delmar Avenue
P. O. Box 735
Granite City, IL 62040
618-876-8500 (Office)
618-876-4534 (Fax)
erobertson@lrklaw.com
ryrobertson@lrklaw.com

IV. STATEMENT OF OPPOSITION

Rule 214(b)(1) requires the movant to state its preliminary position. IIEC opposes the relief sought by FES. IIEC is participating with other parties to this proceeding, in developing a comprehensive rebuttal to FES' Request, and plans to submit that rebuttal to the Department.

IIEC supports the request that was filed Friday, March 30, 2018 by the Electric Power Supply Association and other organizations requesting a 60-day comment period.

V. CONCLUSION

For the reasons set forth above, IIEC respectfully requests that the Department permit IIEC to intervene in this proceeding and, if the Department does not reject the FES Request outright, provide all interested parties with 60 days to file comments on the Request.

DATED this 13th day of April, 2018.

Respectfully submitted,

LUEDERS, ROBERTSON & KONZEN, LLC

From: Reuter, Jack B.
To: AskOE
Subject: Comments on FES request for 202(c) request.
Date: Friday, April 13, 2018 9:33:58 AM

There is no formal request for comments, so this is not a formal comment.
I do work at Davis Besse. I am also part of the public. I live in the north and it get cold here.
The price of electricity is controlled by the price of gas. The price of gas spikes when it is cold. This was very apparent this last winter.
Gas plants do not have guarantee to get gas. Gas plants have shut down, when the price of gas gets too high. Just look at the facts from last winter.
People get guarantee gas; however, most new furnaces do not run without electricity.
People will freeze to death.
When there are brown and black outs.
People will freeze to death.
You can keep lots of people from freezing to death.
If these plants do not get the, cost for electricity, they need to operate, I will be buying a generator that runs on propane.
I will not trust the electric grid. The (gas) wholesalers do not appear to have the public interest as any priority. They appear to just be trying to make the most money.
Can you grantee that there will be electricity when people need it most?
Can you grantee that there will not be brown out and black outs, when people need it most.
Can you grantee that people will not freeze to death because of a lack of electricity?
Do the right thing and protect the public from freezing.

PJM Interconnection | 2750 Monroe Blvd. | Audubon, PA 19403

**UNITED STATES OF AMERICA
BEFORE THE
DEPARTMENT OF ENERGY**

Request For Emergency Order Pursuant)
To Federal Power Act Section 202(c) By) Docket No. _____
FirstEnergy Solutions Corp.)

**MOTION TO INTERVENE AND LIMITED RESPONSE
OF PJM INTERCONNECTION, L.L.C.**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, and the United States Department of Energy's ("the Department") regulations, 10 C.F.R. § 205.383,¹ PJM Interconnection, L.L.C. ("PJM") respectfully files this Motion to Intervene and Limited Response to the March 29, 2018 Request (the "Request") for Emergency Order Pursuant to Federal Power Act ("FPA") Section 202(c), 16 U.S.C. § 824a, submitted by FirstEnergy Solutions Corporation ("FES") in this matter.

I. LIMITED RESPONSE

In its Request to Energy Secretary James Richard Perry (the "Secretary"), FES asks that the Secretary invoke emergency authority under Section 202(c) of the FPA to find that an emergency condition exists in the PJM region that requires immediate action by the Secretary. PJM's limited response, addresses two points to help clarify the record and contribute the Secretary's understanding of the issues.

¹ Federal Power Act Section 202(c) and the Department's policy and regulations provide that FERC's Rules of Practice and Procedure should be used for procedural guidance in Emergency Order proceedings. Guidance published on the Department's website points to the Commission's rules in situations where the Department's regulations at 10 C.F.R. § 205.370, *et. seq.*, are silent. *See, e.g.*, DOE Answer to Procedural Questions Concerning Rehearing of DOE Order, *District of Columbia Public Service Commission*, Docket No. E0-05-01 (December 30, 2005) at 2.

First, for the reasons stated in a letter dated March 30, 2018, to the Secretary from PJM's Senior Vice President, General Counsel, Law, Compliance & External Affairs, Vincent P. Duane (attached hereto as Attachment I), FES has not objectively established that an emergency exists within the meaning of Section 202(c) of the FPA or that there is an immediate threat to system reliability.

Second, FES relies on a report issued by the National Energy Technology Laboratories ("NETL") on March 13, 2018,² to support the Request. PJM respectfully submits herewith PJM's perspective and its response to the NETL Report ("PJM Report" attached hereto as Attachment II).³ The PJM Report will be posted publicly on PJM's website and is submitted for consideration by the Secretary in light of the analysis and conclusions undertaken by the NETL. The PJM Report summarizes PJM's assessment of system operations during the 2017/2018 cold snap period in response to the conclusions reached by the NETL in its report. The PJM Report finds that performance during the 2017/2018 cold snap is "evidence that the grid in the PJM service area remains strong, diverse and reliable."⁴

II. MOTION TO INTERVENE

PJM is a FERC established independent system operator and Regional Transmission Organization.⁵ PJM is a transmission provider under and the administrator of the PJM Open Access Transmission Tariff, operates the PJM markets and conducts the day-to-day operations of the bulk power system in the PJM region.

² NAT'L ENERGY TECH. LAB., RELIABILITY, RESILIENCE AND THE ONCOMING WAVE OF RETIRING BASELOAD UNITS VOLUME I: THE CRITICAL ROLE OF THERMAL UNITS DURING EXTREME WEATHER EVENTS 12 (Mar. 13, 2018) ("NETL Report").

Re: FirstEnergy Solutions' Request for Emergency Relief under Section 202 of the Federal Power Act

Dear Secretary Perry:

PJM Interconnection, LLC (PJM) respectfully seeks to submit this response to the above-referenced request filed by FirstEnergy Solutions and affiliates (FES) on March 29, 2018. While the PJM system presently is reliable by all measures, PJM will refrain, at this time, from responding to FES' assertion that an "emergency condition" will arise should certain FES nuclear plants and potentially certain FES coal plants retire in upcoming years as announced or threatened by the company.¹

PJM will not use this opportunity to express agreement or disagreement with several major points of argument advanced by FES; nor will we correct at this time several misstated facts presented by FES. Instead, PJM simply points out to the Secretary two very obvious and objective facts that relieve the Department from the need to take precipitous, immediate action to address FES' request.

First, whether FES' actions create a reliability concern that may threaten the stable and reliable operation of the grid, much less constitute an emergency within the meaning of Section 202(c) of the Federal Power Act, is a question that will be answered by a proscribed, detailed and regularly employed process found in Part V of the PJM Tariff. Consistent with the PJM Tariff, over the next 30 days, PJM will undertake a thorough analysis of its system to determine whether the announced retirements would present systemic adequacy issues or any local reliability issues, such as insufficient voltage support. Should any such finding result, the PJM Tariff provides an additional 60 days to work with FES and a range of tools available, including ordering transmission system upgrades and, if necessary, offering full cost of service compensation under Part V of the PJM Tariff to induce assets to remain temporarily on-line. Ultimately, PJM could also join FES in its instant request should other remedial options prove insufficient.

Second, PJM can state without reservation there is no immediate threat to system reliability. Indeed, the FES units that announced their expected retirement earlier this week, by their own disclosures, will remain operational in most cases until through May 2021. Moreover, these announcements are not binding – FES

¹ Curiously, the request purports to seek relief for the entire FES merchant fleet - and somehow on behalf of others - relief for *all* other coal and nuclear units in PJM, totaling over 80 generation units. PJM will evaluate the question of impaired reliability or an "emergency condition" based on actual facts – announced retirements – not on the company's general dissatisfaction with the PJM markets or its competitive position therein. Nor will PJM evaluate the impact of closure of other companies' plants unless or until owners of such plants raise the matter with PJM.

{W0153751.1}

610.666.8980 | www.pjm.com

can elect to rescind this notice, or should assets be sold, a subsequent purchaser likewise may decide to continue to operate the units. But even assuming these units do in fact close as of the dates announced, PJM, FERC, and the Department of Energy will have ample time before then to take measures, which at the extreme might include the kind of relief sought in the instant request.

PJM therefore respectfully requests that the Secretary allow PJM's FERC-accepted process to unfold in an orderly manner and refrain from taking unnecessary, extraordinary and precedential immediate action as sought by FES. PJM will commit to sharing publicly (to the maximum extent possible), and in any event to the Department of Energy, our findings resulting from our 30-day process for evaluating the system implications of FES' announced retirements.

Thank you for considering PJM's perspective and suggestions.

Sincerely,

Vincent P. Duane

Conclusion and Next Steps.....	9

Executive Summary

In March 2018, the U.S. Department of Energy's National Energy Technology Laboratory (NETL) released a report¹ assessing electric operations in the nation's Independent System Operators (ISOs) and Regional Transmission Organizations (RTOs) during a prolonged cold snap from Dec. 27, 2017–Jan. 7, 2018. In part, the report focuses on operations in the PJM Interconnection service area. PJM appreciates NETL's overall attention to system performance of each of the northeastern RTOs and ISOs during this period. PJM presents this report to review for the public the analysis undertaken by NETL and the conclusions reached.

PJM believes that the NETL report, as it relates to PJM, reaches some sweeping conclusions that are not supported by the specific facts concerning grid operations during Dec. 27, 2017–Jan. 7, 2018. Although the NETL report contains some appropriate analysis and asks valid questions, the report's overall conclusion is incorrect about the reasons for PJM's dispatch of coal units during the cold snap. PJM dispatched coal units because *their costs were lower* during certain hours of the cold snap. Natural gas and nuclear units were not unreliable or otherwise unavailable to serve the increased customer demand, nor would PJM have faced "interconnect-wide blackouts" without the particular generating units dispatched, as the NETL report claimed. For example, in its Executive Summary, the NETL report reaches the following conclusion:

"In PJM, the largest of the ISOs, coal provided the most resilient form of generation, due to available reserve capacity and on-site fuel availability, far exceeding all other sources (providing three times the incremental generation from natural gas and twelve times that from nuclear units); without available capacity from partially utilized coal units, PJM would have experienced shortfalls leading to interconnect-wide blackouts."

Executive Summary at p. 1.

PJM agrees that the report underscores the importance of a fuel-secure generation fleet to serve future demands. But in PJM's view, the report erroneously concludes that the relative *economics* of coal and nuclear vs. natural gas during the cold snap, which drove the dispatch of coal units (i.e., that the cost of coal was lower), indicates that the system would have faced "shortfalls leading to interconnect-wide blackouts" during this period. As PJM demonstrated in its own report² on system performance during the cold snap, PJM had adequate amounts of resources to supply power – the price of natural gas relative to coal and nuclear during the cold snap drove the dispatch decisions.

During the cold snap, the region experienced an increase in the price of natural gas, which made coal resources (which often did not run under periods of lower natural gas prices) the more economic choice during times of high gas prices. But one cannot extrapolate from these economic facts a conclusion as to future reliability within PJM.

¹ Reliability, Resilience and the Oncoming Wave of Retiring Baseload Units, Volume I: The Critical Role of Thermal Units During Extreme Weather Events; NETL; Mar. 13, 2018; https://www.netl.doe.gov/energy-analyses/temp/ReliabilityandtheOncomingWaveofRetiringBaseloadUnitsVolumeITheCriticalRoleofThermalUnits_031318.pdf

² PJM Cold Snap Performance: Dec. 28, 2017 to Jan. 7, 2018; PJM Interconnection; Feb. 26, 2018; at p. 32; <http://www.pjm.com/-/media/library/reports-notice/weather-related/20180226-january-2018-cold-weather-event-report.ashx>

PJM acknowledges that fuel security is a topic deserving increased focus. PJM has already taken steps to increase fuel security through many initiatives that have been implemented with approval of the Federal Energy Regulatory Commission (FERC), including its Capacity Performance reforms to its Reliability Pricing Model capacity market. These changes, designed to more clearly define the obligations of capacity resources to be available when called upon (and to secure adequate fuel supplies to do so) with stiff penalties for non-compliance, were a key first step in ensuring fuel security among those resources that PJM counts on to ensure reliability.

PJM is committed to further action to adequately value and price fuel-secure resources. PJM intends to pursue these initiatives in a manner that does not choose one particular fuel type over another. Instead, PJM will rely on a clear definition of attributes, and the adoption of market-based mechanisms to price those attributes, in order to drive competitive and efficient results that ensure the continued supply of reliable electricity to meet the region's needs at the lowest reasonable cost. PJM looks forward to working with its stakeholders, the Department of Energy (DOE) and the FERC on these initiatives.

PJM's View — Key Points:

- **Defining Resilience:** When using the term "resilience," the NETL report mixes the availability of adequate generation to meet load with the costs of particular resources in a given hour and their impact on economic dispatch. In essence, the NETL report attempts to quantify "resilience" by comparing the dispatched resource mix by fuel type during a mild demand period to the dispatched resource mix by fuel type during the cold snap period. The report then labels the incremental change in resource fuel types supplying electricity during the cold snap period as "resilience," implying resource availability was physically impaired, which led to a shift in dispatch during the cold snap between coal and natural gas.

However, as noted above, the driver of the higher dependence on coal during the cold snap was the economics (i.e., lower cost) of coal vs. natural gas on an hour-by-hour basis.

PJM's dispatch is designed to ensure both reliability of supplies and competitiveness of prices for customers. PJM does this by "stacking" bids of the units bidding to serve customers in a given interval and only dispatching those units needed based on the lowest cost resources available to meet demand. During a number of hours of the cold snap, coal resources were more economic (i.e., less expensive) than natural gas resources.

This is a "good news" story for coal resources from an economic viewpoint, but the fact that additional coal resources were dispatched due to economics is not a basis to conclude that natural gas resources were not available to meet PJM system demands or that without the coal resources during this period the PJM grid would have faced "shortfalls leading to interconnect-wide blackouts."

In fact, during the cold snap, PJM reserves were over 23 percent of peak load demand, and there were few units that were unable to obtain natural gas transportation, even for most units that relied only on interruptible service.

NETL also makes the argument that offline coal, which came online "suddenly" during the cold weather, acted as adaptive resilient generation. 57 percent of coal generation was self-scheduled and 41 percent was scheduled based on economic offers – largely due to the lower cost of coal vs. gas. By the same token, any natural gas units

that were available³ but not scheduled were counted as offline reserves and, therefore, can also be considered adaptive resilient generation. This is the primary mechanism PJM uses to make reserves available on the system. Those resources that are the most economic (i.e., lowest cost) to provide energy are dispatched to do so, while more expensive resources are held offline and provide reserves. For the peak day of Jan. 5, 28,883 MW of natural gas were available but not scheduled as energy or reserves. These units can also be considered as adaptive reserves using the NETL approach.

- **Emergency Procedures:** PJM's emergency procedures process signals system operators to perform specific actions if system conditions have the potential to deteriorate. Leading up to and during the 2017/2018 cold snap, PJM did not enter into conservative or corrective emergency actions to address capacity or reserve shortages.
- **Forced Outages:** NETL attributes the increase in coal usage to potential issues related to natural gas fuel supply. Generation outages due to fuel supply issues were not prominent. Jan. 5, 2018, hour-ending 1900, the PJM system hit its peak demand during the cold snap period of 137,522 MW. At that time, PJM experienced 2,680 MW of outages due to fuel supply, 2,181 MW of which were related to natural gas supply. This represents a relatively small portion of the total 16,671 MW of all generation was forced offline during that time.
- **Available Capacity and Operating Reserve Margins:** NETL does not identify the level of system reserves available to operators during the cold snap period. The PJM system had 32,645 MW, or 23 percent, of additional capacity available to serve demand during the peak demand of the cold snap period. As illustrated graphically below, PJM's Operating Reserves market, a time-based reliability product for maintaining and dispatching reserves quickly, also maintained sufficient levels throughout the period.

Emergency Procedures

PJM's Emergency Procedures⁴ identify the instructions, rules, procedures and guidelines for the operation of the region's bulk electric system⁵. Under more extreme system conditions, PJM's Emergency Procedures include actions by which PJM would declare capacity or reserve emergencies and subsequent remedial steps.⁶ For instance, PJM is able to recall off-system sales of energy from resources committed to serve the PJM region. Leading up to and during the cold snap event, PJM entered into Cold Weather Alerts⁷ and High Load Voltage Schedule Warnings and Actions.⁸ Neither procedure

³ Available units are mechanically able to operate but may not be scheduled based on economics. A simple call to those units would get those units operating on the system.

⁴ PJM Manual 13: Emergency Operations; PJM Interconnection; v.65 effective January 1, 2018;
<http://www.pjm.com/~media/documents/manuals/m13.ashx>

⁵ At times of actual or potential emergency conditions, PJM will issue emergency procedure notifications ranging in severity from informational alerts and warnings to critical system actions.

⁶ *Id.* Section 2, p. 16

⁷ Cold Weather Alerts serve to notify members of higher-than-normal demand, notify asset owners to restore all available transmission and generation equipment, and notify asset owners to defer any maintenance activities planned during the alert period.

represents a capacity or reserve shortage condition. The PJM market did not enter a Performance Assessment Interval. Performance Assessment Intervals are time periods when emergency conditions require capacity committed to serve the PJM market to perform to their committed, prescribed level or suffer significant financial penalty.

Economic Dispatch

As described above, through economic dispatch, PJM uses the lowest cost set of resources to serve demand at a given interval. During the cold snap, coal and oil resources became more economic than natural gas-fired resources when natural gas prices rose.

The average megawatt contribution by fuel type for the morning (Figure 1) and evening peaks (Figure 2) of Dec. 1, 2017–Jan. 7, 2018 are shown below. The megawatts obtained from natural gas and nuclear capacity remain relatively stable in both periods. Coal and oil generation output increased.

The stable output of nuclear generation is expected because nuclear generation typically operates at its full capability whenever it is available. The increase in output from coal and oil is attributable to the economics of the supply offers into the market. Figure 3 shows the supply offers of available resources. The dashed lines represent coal and gas offers from Dec. 1–26, 2017. The solid lines represent coal and gas offers during the Dec. 27, 2017–Jan. 7, 2018 cold snap period.

While coal offers remained relatively consistent between the two periods — in the \$0–30/MWh range — during mild system conditions, considerable contributions of natural gas are more economic than some coal resources. Progressing to the elevated demand period during the cold snap, the supply curve for gas resources shifts as fuel becomes more expensive, making coal (and oil) resources more economic to operate.

⁸ Heavy Load Voltage Schedule Warnings and Actions alert transmission owners to energize all capacitors, remove all reactors and optimize voltage schedules to help maximize the power transfer capability of the system. By taking these steps, PJM ensures the system is positioned in the most resilient manner possible, allowing us to move power from one area to another if there are major generator or transmission failures. These procedures are issued proactively and do not signify any capacity or transmission concerns.

Figure 3. Avg. Incremental Generation Supply Offers by Fuel Type, Dec. 1, 2017–Jan. 7, 2018⁹

Forced Outages

Figure 4 shows that on Jan. 5, 2018, hour-ending 1900, PJM's peak demand day during the cold snap, PJM experienced a total of 16,671 MW of forced outages for all reasons. Data below shows that overall forced outages during the peak demand hour of the recent cold snap were about half what they were during the 2014 Polar Vortex.

Figure 5 shows that on Jan. 5, 2018, hour-ending 1900, PJM's peak demand day during the cold snap, out of the total forced outage MW PJM experienced 2,680 MW of outages due to fuel supply. 2,181 MW of fuel supply-related outages were due to natural gas supply. This represents less than 2 percent of the total load requirement at the time. During the cold snap period, PJM's highest experienced outages due to fuel supply occurred on Jan. 7, 2018, hour-ending 0900. At this time, 6,418 MW were unavailable to operators, with natural gas making up the majority of fuel type outages in this category. By contrast, forced outages due to fuel supply issues during the 2014 Polar Vortex peaked at roughly 10,000 MW.¹⁰

⁹ 'Dec. 2017' represents the period prior to the cold snap experienced in PJM (Dec. 1 – 26, 2017). 'Cold Snap' represents the period during the cold snap experienced in PJM (Dec. 27, 2017 – Jan. 7, 2018).

Figure 4. Forced Outages Due to Fuel Supply Issue by Fuel Type

Figure 5. Forced Outage Causes

Available Capacity and Operating Reserve Margins

During the cold snap period, PJM maintained healthy reserve margins. Figure 6 illustrates that during the peak demand period of the cold snap period, PJM maintained more than a 23 percent reserve margin above the 18,690 MW of capacity that was unavailable. To put that into perspective, the PJM system had 32,645 MW of additional capacity available to serve demand.

PJM Cold Snap System Peak Period Jan. 5, 2018 HE 1900		
		Description
PJM Installed Capacity	188,875 MW	All PJM capacity market committed internal and external installed capacity (Includes wind and solar at unforced capacity ratings. Excludes energy-only units and any winter ambient uprates.)
All Outages	18,690 MW	Includes: All forced, maintenance and planned outages.
PJM Installed Capacity Available	170,167 MW	"PJM Installed Capacity" less "All Outages"
Demand	137,522 MW	The PJM peak demand during the cold snap period
Installed Capacity Reserve Margin	37.3%	"PJM Installed Capacity" divided by "Demand" less 1
Available Capacity Reserve Margin	23.7%	"PJM Installed Capacity Available" divided by "Demand" less 1

During the cold snap, PJM did not experience reserve shortage conditions. Sufficient reserves were available to meet both the contingency (primary) and synchronized reserve requirements as illustrated below. Figure 7 compares the contingency (primary) reserve values to the contingency reserve requirement and Figure 8 compares the synchronized reserves to the synchronized reserve requirement¹¹.

Figure 7. Contingency (Primary Reserves), Dec. 28, 2017–Jan. 8, 2018

¹¹ Primary reserves are the total quantity of resources both synchronized and not synchronized to the grid, assigned to respond within ten minutes when deployed. Synchronized reserves is a subset of primary reserves, and is comprised of only resources that are synchronized to the grid.

Figure 8. Synchronized Reserves, Dec. 28, 2017—Jan. 8, 2018

Conclusion and Next Steps

PJM noted in its previous report¹² on performance during the cold snap that thanks to the reliable operations from PJM members and operators, the system performed well in the cold snap, evidence that the grid in the PJM service area remains strong, diverse and reliable. In fact, PJM has implemented the Reliability Pricing Model and Capacity Performance as key steps to securing an adequate level of reserves with enhanced unit performance to mitigate the impacts of extreme weather and generator retirements resulting from environmental regulations.

Additionally, PJM noted that more work needs to be done to properly recognize and price key generator attributes associated with fuel security. NETL's report continues an important conversation to focus on the resilience of the nation's bulk electric system. In prior reports and filings with FERC, PJM has highlighted the importance of developing fuel security criteria that can be incorporated and priced in the PJM markets. PJM is also looking to add resilience drivers into its planning process and to enhance gas-electric coordination.

PJM has detailed both its own actions in order to enhance resilience and specific recommendations for action that it submitted to FERC in PJM's March 9 Comments in FERC's Grid Resilience docket (Docket No. AD18-7-000). PJM intends to continue communication with the DOE and with the FERC, states and stakeholders to underscore these needed actions and looks forward to working with the DOE to further focus efforts on ensuring a competitive market-based approach that ensures fuel security is appropriately valued in the markets.

PJM urges that the comments above be taken as a factual response to the conclusions reached in the NETL report. Most importantly, PJM appreciates NETL's contribution to focusing policymakers' attention on these issues going forward.

Utility Workers Union of America, AFL-CIO
Comments Re: Federal Power Act Section 202(c) Emergency Order

The Honorable Rick Perry
 Secretary of Energy

Dear Mr. Secretary:

The Utility Workers Union of America represents tens of thousands of hard-working Americans whose families and communities rely on the electric generation industry for family-supporting jobs and critical revenue to support their local economies. In recent months, we have filed comments (attached) with the Department of Energy seeking the agency's support to allow irreplaceable baseload power generation infrastructure to continue providing resiliency and security to the nation's power grid.

In continued support for the value that reliable, baseload power generators such as coal-fired and nuclear powerplants contribute to our national grid, we ask that you take swift action to issue an emergency order pursuant to Federal Power Act Section 202(c) allowing the power these facilities generate to receive proper market valuation for the full costs of their operation and for the security and reliability they provide to our nation's electric infrastructure.

Continued under-valuation of the contribution made by these facilities is resulting in the premature closure of powerplants, the displacement of tens of thousands of workers and loss of high-quality jobs, the disruption and disintegration of the communities around them, and a dangerous weakening of our physical infrastructure leading to unprecedented national security concerns. No nation can be considered safe that cannot reliably and affordably power its economic and physical systems.

Allowing this alarming trend to continue will create a state of true national emergency, unreckoned with in our lifetimes, as electric power becomes ever less reliable, the grid increasingly unstable and insecure, and entire regional economies sink into ruin.

Once baseload powerplants close, they cannot be brought back in any meaningful timeframe, if allowed to happen, reversal of this mistake will be an economic and political impossibility, leaving our nation with few options. Further, only the most trivial of assistance is currently available to displaced workers and their communities in the face of powerplant closures, creating corresponding social chaos in parallel with the economic and physical harm caused by the erosion of a stable power grid.

Now is the time to act. An emergency order under Section 202(c), or other legal authorities available to you as Secretary of Energy, must occur before the damage becomes irreversible.

We thank you and the agency for the seriousness with which you are taking this unfolding emergency, and stand ready to assist and support in any effort to avert this national crisis.

Sincerely,

D. Michael Langford
 National President

February 20, 2018

President Donald J. Trump
The White House
1600 Pennsylvania Ave, NW
Washington, DC 20050

Dear President Trump,

The hard-working men and woman who work in our nation's power plants need your help – and they need your help now. Last month, the Federal Energy Regulatory Commission (FERC) rejected a proposed rule by the Department of Energy (DOE) that would have corrected competitive electricity markets to appropriately value attributes uniquely provided by fuel-secure baseload generators - predominantly critical coal and nuclear power plants. FERC's failure to timely address the pressing need to fix America's electricity markets will have devastating consequences for our economy, our power grid, and our national security.

Most alarmingly, power plant closures will be immediate and irreversible. Largely because of punitive regulatory pressures against coal and nuclear power, approximately 60,000 megawatts of fuel-secure baseload power plants have closed over the last several years and many more are slated for premature closure in the near future. Unfortunately, the improved regulatory environment will not stop those closures from happening. Electricity market rules simply do not value the reliability and resiliency attributes that fuel-secure baseload generators provide the grid.

The imminent closure of these plants will have far-reaching effects. First and foremost, the nation's power grid needs fuel-secure baseload power. Coal and nuclear fuel are abundant, reliable, affordable and not vulnerable and unpredictable conditions or emergencies that can disrupt the delivery of other fuels. Coal-fired power plants can stockpile several weeks' or months' worth of fuel on site; nuclear generators store enough fuel to last months or even years.

In the case of an extreme weather emergency, a coordinated attack or any significant disruptions to the fuel delivery infrastructure, fuel-secure baseload generators are the only ones capable of continuing operations. If fuel-secure baseload plants continue to be forced to retire, our power grid is likely to become overloaded or fail in the event of a sudden, extreme increase in demand.

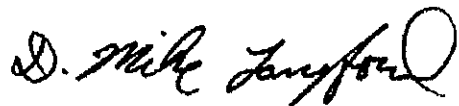

This is not merely a hypothetical situation: the 2014 polar vortex stretched the country's natural gas pipeline system well past its capabilities, resulting in skyrocketing prices and fuel shortages. These shortages during extreme cold temperatures could have been deadly, if not for fuel-secure baseload power plants that essentially carried the grid through the extended emergency. Many of the generators that were running full- out have since retired.

Experts agree. The North American Electric Reliability Corporation (NERC), which is responsible for establishing reliability standards for our grid, described the tenuous situation well in comments it provided to Secretary Perry's proposal. NERC said "Coal and nuclear generation generally have the unique attributes of low outage rates, high availability rates, and, with on-site storage, low fuel supply sensitivity necessary to provide secure and stable capacity to the grid. While their current benefits and potential are significant, non-synchronous

generation and natural gas-fired facilities do not currently replace the secure capacity provided by coal and nuclear generation.”

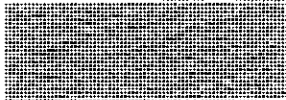

FERC’s failure to approve the DOE proposal to properly value the reliability and resiliency attributes uniquely provided by fuel-secure baseload generators could soon prove to be a catastrophic mistake. We do not have the luxury of kicking the can any farther down the road. Without immediate action to stop the imminent closure of fuel-secure baseload generators, our country will find itself confronted with a crisis that could have been prevented. This is not a question of if, but when.

I urge the White House to direct DOE Secretary Rick Perry to use the emergency powers under his authority to stop the coming closures of additional coal and nuclear plants across the country. This is the only way to prevent the impending disaster. The country cannot afford further delays. DOE must act right away.

Sincerely,
D. Michael Langford
National President

May 12, 2017

The Honorable Rick Perry
Secretary of the U. S. Department of Energy

Via Email: Joe.Uddo@hq.doe.gov

Dear Mr. Secretary:

Unions, labor and power plant workers across the country applaud the Department of Energy's study examining electricity markets, the value of baseload power and the long-term security and resiliency of the electric grid. Baseload coal and nuclear power plants employ more than 154,000 workers, produce major infrastructure projects that put Americans to work, and support a resilient electric grid.

Baseload power plants have long been the "work horses" of the electric system, providing energy to customers 24 hours a day, 365 days a year. With significant on-site fuel reserves, they provide the resiliency required to keep electricity flowing under all circumstances since their operation is not subject to interruption by extreme events such as weather or attacks on infrastructure that disrupt fuel delivery to other generation resources. Recently, EPA Administrator Pruitt noted as much when he talked about the consequences of an attack on key infrastructure. Our nation's security is dependent on maintaining these plants to support a resilient supply of electricity.

However, numerous baseload power plants have permanently shut down in recent years, and many more are expected to close prematurely in the very near future. Once they are gone, they are gone for good. Baseload generation is under serious threat from market-distorting subsidies and mandates, regulations that target these resources, low natural gas prices and markets that don't value resiliency. We are at a crisis point. Further decline in the number of plants will not only impact the grid and national security, it will cost valuable jobs and discourage industrial development opportunities nationwide. This is an outcome America simply can't afford.

Our baseload power plants and the dedicated, skilled workers who operate them are the lifeblood of their communities. They deliver a strong tax base and support between three and eight times more high-paying jobs than do other forms of electricity generation. We depend on these plants to create a robust workforce, and the country depends on them to support a healthy economy and electricity supply.

Unless action is taken, the long-term viability of baseload power plants along with the jobs and substantial economic opportunities they bring is at risk. And, our national security could be compromised if we don't ensure a resilient grid. We encourage the Administration to take prompt and meaningful action to protect baseload power plants and America's energy future.

Sincerely,

D. Michael Langford
National President

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Grid Reliability and Resilience Pricing;
Proposed Rule

Docket No. RM18-1-000

**COMMENTS OF THE UTILITY WORKERS
UNION OF AMERICA, AFL-CIO**

On September 27, 2017, the Secretary of Energy notified the Federal Energy Regulatory Commission (“Commission”) by letter that, pursuant to authority under Section 403 of the Department of Energy Organization Act, he was proposing action by the Commission on a proposed rule to protect the resiliency of the electric grid (“proposal”). The Department of Energy (“DOE”) published the proposal on October 10, 2017.¹

Pursuant to the Commission’s notice in the above captioned docket inviting comments on the Secretary of Energy’s proposal, the Utility Workers Union of America, AFL-CIO (“UWUA”) respectfully submits for the Commission’s consideration the following comments. These comments reflect the UWUA’s experience that coal and nuclear electric generating units (“EGU”) provide reliability and resiliency attributes critical to the delivery of affordable, reliable, and resilient electric service.

DESCRIPTION OF UWUA

The UWUA is one of the most progressive unions in all of the labor movement. The UWUA has over 50,000 members working in the electric, gas, water, and nuclear industries across the United States.

¹ 82 Fed. Reg. 46940.

UWUA INTEREST IN THE PROPOSAL

For decades, UWUA members working at baseload coal and nuclear EGUs have brought significant value to the electric grid. Time and again, these EGUs, with their stable sources of on-site fuel, have kept the lights on when the grid is strained to the breaking point. The UWUA has a substantial interest in fixing outdated market structures that fail to capture the unique value provided by baseload coal and nuclear EGUs – and the UWUA members running them. Getting these markets right is not simply a matter of sound policy, it impacts our members' jobs and communities.

In the last seven years, 101,000 megawatts (“MW”) of coal-fired generating capacity has retired or has announced plans to retire.² In that time, five nuclear EGUs with a capacity of nearly 5,000 MW have closed, with another six nuclear EGUs currently projected to close in the next nine years.³ Workers at these EGUs have been hit hard. Since 2011, nearly 8,000 jobs have been lost in fossil fuel electric power generation,⁴ and nearly 6,500 nuclear power generation jobs lost during that same period.⁵ If baseload coal and nuclear generation EGUs are not

⁵ ENERGY INFO ADMIN., *Power Sector Employment Declines, Except for Renewable Electricity Generators* (Dec. 19, 2014) <https://www.eia.gov/todayinenergy/detail.php?id=19271> (finding more than 4,900 jobs lost from Jan. 2011-June 2014) and compare BUREAU OF LABOR STATISTICS, *Quarterly Census of Employment and Wages, Private, NAICS 221113 Nuclear electric power generation, All Counties, July 2014*, https://data.bls.gov/cew/apps/table_maker/v4/table_maker.htm#type=1&year=2014&qtr=3&own=5&ind=221113&sapp=0 (47,239 jobs) and *Mar. 2017*,

properly valued for their services, thousands more workers are at risk of losing their jobs. Our members are skilled laborers who have specific expertise derived from long experience. The quality jobs they now have working in EGUs that are at-risk for closure are increasingly hard to find in their regions, let alone across the country. Absent Commission action, the jobs that our members at coal and nuclear EGUs stand to lose cannot be easily replaced.

Further coal and nuclear EGU retirements not only undermine our members' livelihoods, but also impact the communities in which they live. In 2012, a member of the Avon Lake, Ohio city council testified to Congress about the rippling harms that closure of the local EGU would have on the city.⁶ The resulting substantial reduction in collected income taxes would slice the emergency medical service operating budget in half.⁷ Closing the EGU would cut revenue for the Avon Lake City School District by nearly \$4 million a year – an 11% reduction.⁸ This would force the district to end programs, including those for students with special needs – such as for autism, depression, ADHD, and those suffering from the effects of trauma or abuse.⁹ The Avon Lake School District Superintendent said the loss of this revenue would be “devastating.”¹⁰ Absent Commission action, further coal and nuclear EGU closures will make it harder to pay for the schools, hospitals, and basic services that keep the communities in which our members live vibrant and healthy.¹¹

https://data.bls.gov/cew/apps/table_maker/v4/table_maker.htm#type=1&year=2017&qtr=1&own=5&ind=221113&supp=0 (45,554).

¹¹ *Id.* at 85. See also Mark Haggerty, *Communities at Risk from Closing Coal Plants*, HEADWATERS ECON. (Mar. 2017), <https://headwaterseconomics.org/energy/coal/communities-coal-plant-closures/> (noting that the

Our members do not seek Commission action only for the sake of maintaining their jobs. Rather they know the value that their work brings to the electricity grid – because they have lived it. The on-site fuel at baseload coal and nuclear EGUs provides the electricity grid with reliability and resiliency characteristics that are unique across the fleet. This conclusion is not based on theoretical market models or complex algorithms, but on the experience of our members working day and night to run these EGUs. If baseload coal and nuclear EGUs shut down because they cannot capture the proper value for their irreplaceable benefits, then the markets have failed to maintain an affordable and reliable grid. Absent Commission action, the country is at imminent risk of losing coal and nuclear EGUs that provide critical reliability and resiliency attributes to the electricity grid.

Reliable electric service in many parts of the country is no longer based on requirements crafted by engineers and implemented by workers. Instead, it is entrusted to markets, designed by economists, that are heedless of any unpriced factor, even if the factor is a public necessity like resiliency. Electricity markets are supposed to be a means to an end – affordable, reliable, and resilient electric service. They are not an end themselves, and as a means, they aren't working.

The modern electricity grid is increasingly becoming a place where theory replaces experience. When experience shows theory to be wrong, the response is to ignore experience and tinker with theory, over and over again. This is electricity regulation that elevates market design over reliability. But reliability is a matter of public health and safety, and one we cannot afford to get wrong. We can crumple up a theoretical market design and start over. Critical

economic impacts of coal EGUs will be felt acutely locally, particularly in areas that have challenges such as poverty status, language barriers, and isolation from larger job centers).

infrastructure providing essential reliability attributes, once lost, is gone forever. It is time for the Commission to fix the problem, fix the markets, and continue the long tradition upheld by UWUA members of a reliable and resilient electricity grid.

COMMENTS

I. Baseload Coal and Nuclear EGUs Provide the Electric Grid With Crucial Reliability and Resiliency Attributes.

DOE's recent Staff Report on Electricity Markets and Reliability ("DOE Staff Report"),¹² as well as the Secretary of Energy's proposal, highlight the growing importance of the distinct but interrelated concepts of electricity reliability and resiliency. While defined in a number of ways, reliability essentially incorporates history to help design systems and equipment in a manner that mitigates generally known risk. Resiliency, on the other hand, accounts for an increasingly uncertain future, one with continuously evolving threat vectors that increase the potential for low probability, high consequence events. In this way, resiliency is a crucial element of reliability. As PJM Interconnection ("PJM") explains, resilience is "preparing for,

¹² STAFF REPORT TO THE SECRETARY ON ELECTRICITY MARKETS AND RELIABILITY (Aug. 2017).

operating through and recovering from a high-impact, low-frequency event. Resilience is remaining reliable even during these events.”¹³

Always-on baseload generation resources, historically coal and nuclear EGUs, provide essential reliability services critical to operating a reliable and resilient electricity grid. As the North American Electric Reliability Corporation (“NERC”) recently noted, these units “provide frequency support services as a function of their large spinning generators and governor-control settings, along with reactive support for voltage control. Power system operators use these services to plan and operate reliably under a variety of system conditions, generally without the concern of having too few of these services available.”¹⁴ While natural gas and other resources provide some of these services, a number of factors affect whether these resources are equipped and available to provide the full breadth of necessary reliability services.¹⁵

With high availability rates, low forced outages, and secured on-site fuel, coal and nuclear baseload EGUs are also critical to electric grid resiliency. NERC explained that “on-site fuel allow these units to operate in a manner independent of supply chain disruptions.”¹⁶ These attributes make coal and nuclear EGUs central to effective “fuel assurance,” or the ability to maintain operations independent of external delivery infrastructure or rapidly changing weather patterns,¹⁷ on the grid.

By contrast, natural gas EGUs do not store fuel on site. Rather natural gas is delivered to the EGU as needed for generation. Thus, disruptions at any phase of the natural gas supply

¹³ EVOLVING RESOURCE MIX AND SYSTEM RELIABILITY 37 (Mar. 30, 2017).

¹⁴ DOE Staff Report at 64 (citing letter from Gerry Cauley, President and CEO, NERC to Sec. of Energy Rick Perry, May 9, 2017 (“NERC Letter”).

¹⁵ *Id.*

¹⁶ *Id.*

¹⁷ PJM, EVOLVING RESOURCE MIX, , *supra* note 13 at 24.

chain, including production, processing, transportation in pipelines, or storage – all of which have seen disruption in recent years – will diminish or eliminate natural gas availability at the EGU. Furthermore, coal and nuclear fuel use is highly concentrated in the electricity subsector. Natural gas has many uses outside the subsector, including for manufacturing and – as was critical during the 2014 Polar Vortex – home heating. As many EGUs still lack firm contracts for the resource, natural gas unavailability presents an increasing vulnerability to the electric grid as generators become more reliant on natural gas. Natural gas brings benefits to the electricity grid, but the resiliency of on-site fuel is not one of them. Reliability elements are not choices on a menu. All of them must be maintained.

The loss of coal and nuclear EGUs has a substantial impact on fuel assurance attributes critical to electric grid resilience. Analysis by PJM found that even moderate retirements of these EGUs would reduce PJM's fuel assurance capability by almost 30% if the units were replaced by natural gas.¹⁸ That capability would be cut almost in half if capacity lost from high coal and nuclear generation retirement is replaced by natural gas, and by 60% if replaced by renewables.¹⁹ Such a loss could seriously undermine the ability of an otherwise reliable electric grid to withstand sudden shocks – natural or manmade. As PJM observes, “[h]istory has shown that, despite having a system that meets reliability standards and requirements, rare extreme events, such as those experienced in PJM and other parts of the world, may produce negative impacts to the system that threaten the ability to continue to deliver energy services.”²⁰ Based on this experience, PJM stress-tested 98 hypothetical generation portfolios, each deemed “reliable,”

¹⁸ *Id.* at 24.

¹⁹ *Id.*

²⁰ *Id.* at 33.

against a polar vortex event, and found that only 34 were also resilient.²¹ Notably, the vast majority of these 34 resilient portfolios had a high share of coal and nuclear generation.²²

II. Baseload Coal and Nuclear EGUs Were Critical to Reliable and Resilient Electric Service During the Polar Vortex.

PJM's stress test confirms what was already learned during the 2014 Polar Vortex. The electricity grid needs existing coal and nuclear EGUs to maintain reliable operation across all scenarios, including a high-impact, low-frequency event. Coal-fired EGUs – and the UWUA members operating them – stepped up to maintain crucial, needed power as temperatures dropped and electricity demand spiked. According to Commission staff, “data for January 2014 indicates that the sizable increase in electric demand was served from mostly coal-fired generation while natural gas-fired generation actually declined slightly between December 2013 and January 2014.”²³ Nuclear EGUs – already operating at nearly full capacity – continued to generate needed electricity at critical periods unaffected by the cold temperatures.

Coal was critical in preventing calamitous impacts on customers and the nation during the Polar Vortex. Yet, opponents have criticized forced outages at coal-fired EGUs during the Polar Vortex in an attempt to challenge coal's resiliency attributes. To the contrary, when put into context, these statistics make the case for coal resiliency stronger.

Forced outages occurred across all generation types during the Polar Vortex for a variety of reasons. For coal, the major issue turned out to be the Environmental Protection Administration's (“EPA”) Mercury and Air Toxics Standards (“MATS”). A substantial number

²¹ APPENDIX TO PJM'S EVOLVING RESOURCE MIX AND SYSTEM RELIABILITY 41 (Mar. 30, 2017).

²³ STAFF PRESENTATION FOR THE WINTER 2013-2014 OPERATIONS AND MARKET PERFORMANCE IN RTOS AND ISOS TECHNICAL CONFERENCE 9, Docket No. AD14-8-000, Apr. 1, 2014.

of forced coal outages within PJM occurred at EGUs slated for retirement due to MATS.²⁴ One analyst concluded that about half of coal-fired EGU outages “seems to be related to not maintaining units scheduled to imminently retire.”²⁵ In other words, forced coal-fired EGU outages during the Polar Vortex were more the result of the government’s “War on Coal” than any other factor. On the other hand, “[t]he concern related to gas plants is that as the grid becomes more reliant on gas, the shortcomings of the gas delivery system will increase unless ameliorated.”²⁶ As NERC concluded, “one of the largest issues that impacted gas-fired generation was the curtailment of fuel supply. Unlike coal and fuel oil, natural gas is not typically stored on site. As a result, generators rely on real-time delivery of natural gas from their suppliers. As natural gas is widely used outside the power sector, the demand from other sectors—in particular residential heating demand during cold winter weather—can critically affect the ability of pipeline operators and suppliers to deliver natural gas to the power sector.”²⁷

Indeed, the most prevalent cause of forced generation outage during the Polar Vortex was natural gas availability, far more so than any other issue. As temperatures plunged, demand for natural gas soared – so high that some of our members report being unable to procure any natural gas or oil to run dual-fueled plants. The numbers back such anecdotes. According to PJM, 24% of all forced outages resulted from natural gas interruptions.²⁸ By comparison, 15% of forced outages for all fuel types, including natural gas and coal, resulted from weather-related issues, a

²⁸ PJM, ANALYSIS OF OPERATIONAL EVENTS AND MARKET IMPACTS DURING THE JANUARY 2014 COLD WEATHER EVENTS 25 (May 8, 2014).

category that includes frozen coal piles as well as many other issues.²⁹ This unavailability of natural gas, along with other factors, led to natural gas-fired EGUs having the highest forced outage rate during the Polar Vortex, fully 55% across all generator types.³⁰ Within PJM specifically, natural gas-fired EGUs accounted for 47% of forced outages, even though gas-fired EGUs comprised just 29% of the total available generation.³¹

Coal-fired EGUs were critical during the Polar Vortex to preventing load shedding that would have created a public health crisis as customers were left in the cold during freezing temperatures. Yet much of this capacity is now gone — along with the jobs behind it — and will not be available for the next grid emergency, whatever form it takes. American Electric Power (“AEP”) CEO Nicholas Akins testified to Congress that 89% of the generation retired by AEP because of MATS was called upon to meet demand during the Polar Vortex.³² As the *New York Times* summarized in a headline, “Coal to the Rescue, but Maybe Not Next Winter.”³³ The coal-fired EGUs that remain performed strongly during the Polar Vortex, but are now under great threat from grossly distorted markets. Their closure will exacerbate the greatest challenge posed to the electricity grid during the Polar Vortex — natural gas unavailability.

FERC should have addressed this problem aggressively three years ago. But better late than never.

III. There is Imminent Risk of Losing Resiliency Benefits Provided by Baseload Coal and Nuclear EGUs that Markets Do Not Properly Value.

²⁹ *Id.*

³¹ 2014 COLD WEATHER EVENTS, *supra* note 28 at 25.

³² *Keeping the lights on - are we doing enough to ensure the reliability and security of the U.S. electric grid?: Hearing Before the S. Comm. on Energy and Nat. Res.*, S. HRG. NO. 113-271 at 58 (Apr. 10, 2014).

³³ Matthew L. Wald, Mar. 11, 2014 at B1.

A balanced and diversified portfolio of generation including a large share of coal and nuclear baseload EGUs is critical to providing essential reliability services, including the fuel assurance capability necessary for grid resiliency. However, these generating resources have been under unprecedented pressure in recent years, pushing the electric grid to a tipping point where it is at imminent risk of losing substantial resiliency attributes.

Unless action is taken to compensate generators for essential resiliency services in electricity markets, otherwise fully-functional baseload EGUs in electricity markets are at risk of closure at historic rates. In PJM alone, over the past three years, nearly 9,000 MW of coal-fired generation have retired, the equivalent of a dozen large power plants. Much of this capacity operated during the Polar Vortex and is no longer available to run in the event of system stress. Even more concerning, numerous baseload generating EGUs in PJM have announced that they are financially challenged and are closing or contemplating closure. As much as 16,000 MW of additional reliable baseload generating capacity – enough to power over 12 million homes – could retire over the next several years, leaving PJM without fuel-secure baseload resources.

Other markets are experiencing similar concerns. The New England Independent System Operator (“NE-ISO”) recently warned that between already-announced retirements removing 2,200 MW of non-gas-fired capacity, over 5,500 MW of additional oil and coal capacity at risk for retirement in coming years, and uncertainty surrounding the future of 3,300 MW from the region’s remaining nuclear EGUs, it was “skating by on the coldest days.”³⁴ NE-ISO came to an ominous conclusion that reverberates across electricity markets, “If a ‘perfect storm’ of problems were to occur, ISO system operators could be forced to use stronger measures, such as asking the

³⁴ 2017 REGIONAL ELECTRICITY OUTLOOK 27, 29.

public to conserve electricity or, in extreme cases, ordering controlled power outages. This risk increases after the upcoming generator retirements.”³⁵

No one should mistake these closures as simply a matter of economics. Let there be no mistake, as warned by the UWUA and other unions, as well as other stakeholders and experts, we are now feeling the reverberations of expensive EPA regulations. As far back as 2011, comments joined by the UWUA raised the alarm regarding potential coal-fired EGU closures and questioned EPA’s projections concerning MATS.³⁶ Our comments presented detailed analysis warning that 56,000 MW of coal-fired generation was at risk for closure due to MATS, compared to a risible EPA projection at that time of just 9,900 MW.³⁷ We further noted that “larger units may be closed in response to the rule due to site constraints, cost, or other considerations.”³⁸ Our projections were on the mark. The Energy Information Administration reported in 2014 that 60,000 MW of coal-fired generation was projected to close by 2018, with the vast majority retiring by the MATS deadline.³⁹ Now, saddled by control costs that were grossly underestimated by EPA,⁴⁰ larger coal EGUs face challenges in markets.

These regulatory pressures are being compounded by poorly designed electricity markets that fail to compensate baseload generation for reliability and resiliency services. This, in turn,

⁴⁰ See UNIONS FOR JOBS AND THE ENVIRONMENT COMMENTS, *supra* note 36 at 16-18 (“EPA Overestimates Reliance on Dry Sorbent Injection And Underestimates Unit Retirements”).

undermines diversity and erodes the electric grid's ability to respond to system-wide impacts like a polar vortex. As the DOE Staff Report noted, "[m]arkets need further work to address grid resilience. Market mechanisms are designed to incentivize individual resources rather than develop balanced portfolios."⁴¹

Maintaining resiliency services like fuel assurance capability was of little concern when wholesale market constructs were first designed, since the lowest cost generation sources at that time – baseload coal and nuclear EGUs – already incorporated high fuel assurance. Yet the quasi-governmentally designed and operated markets have failed to keep pace with rapidly-evolving factors, including low natural gas prices, environmental regulations, and federal subsidies for renewables, that have placed new pressure on reliable baseload generation with fuel on site.

Without the intervention proposed by DOE, Americans in electricity markets across the country face imminent risk of being left defenseless against the next major grid shock – whether resulting from a known or now-unknown threat. As NERC noted, "[p]lanning approaches, operational coordination, and regulatory partnerships are needed to assure fuel deliverability, availability, security (physical and cyber), and resilience to potential disruptions. Unfortunately, [such] an approach [is] not obvious in electricity markets today."⁴²

IV. Valuing Coal and Nuclear EGU Resiliency Benefits is Consistent With Market Evolution.

Notwithstanding their current state, electricity market constructs can be modified – as they are so frequently to accommodate a variety of purposes – to efficiently operate while compensating for reliability services. The DOE Staff Report notes that "[a] diverse resource

⁴¹ DOE Staff Study at 102.

⁴² *Id.* at 92 (citing NERC Letter).

portfolio could complement wholesale market products that recognize and compensate providers for the value of [essential reliability services] on a technology-neutral basis.”⁴³ This may be optimal for society. “There are tradeoffs between multiple desirable attributes for the electric grid. A more reliable and resilient system may be more costly than the least-cost system. Consumer life, safety and health are dependent on a reliable and resilient electric grid, making the grid a national security asset.”⁴⁴

Indeed, the Commission has intervened in the markets on numerous occasions in order to achieve reliability and other similar “extra-market” objectives. For example, the Commission recognized a flaw in the markets that could lead to a long-term shortage in electricity supply, and took action to remedy that flaw. Prior to 2006, the market incentives in PJM’s capacity markets were such that potential new generators could be incentivized to bid at a level below their actual cost of generation – generators that receive state subsidies, for example. In those instances, below-cost bids could skew downward the capacity auction clearing price, thereby discouraging the development of new generation and, ultimately, reducing the available supply of electricity.⁴⁵ In response, the Commission approved PJM’s Minimum Offer Price Rule, which establishes a price floor for new generators’ bids to protect against artificial suppression of the capacity markets.⁴⁶

This is consistent with many other instances of the Commission having identified and taken action to rectify market flaws that would impair the provision of affordable, reliable, and resilient electric service. Such actions include: (i) approval of several ISO-NE “Winter

⁴³ *Id.* at 91.

⁴⁴ *Id.* at 61.

⁴⁵ See *NRG Power Marketing v. FERC*, No. 15-1452, slip op. at 3-6 (D.C. Cir. 2017) (providing background on Minimum Offer Price Rule).

⁴⁶ *Id.*

Reliability Programs” – out-of-market solutions to ensure adequate fuel supplies for winter, which provided additional compensation for demand response, oil inventory, dual-fuel, and LNG resources;⁴⁷ (ii) requiring capacity markets to recognize transmission constraints through the inclusion of locational components, which generally results in the procurement of minimum quantities of capacity from local generating resources;⁴⁸ and (iii) approval of “make-whole” payments such as the Day-Ahead Margin Assurance Payment, which is aimed at addressing price volatility by compensating market participants for flexibility in their real-time electricity market offers.⁴⁹

In other words, the existing market structures have evolved over time, and a key part of that evolutionary process has been the identification of market flaws and the intervention by the Commission to address them. The Commission has historically recognized that the markets are a means to an end. To the extent that market designs and structures have failed to compensate adequately participants for valuable services provided in furtherance of that end, the Commission has responded appropriately by implementing mechanisms necessary to remedy those flaws in order to provide affordable, reliable, and resilient service.

Today, the failure of the markets to recognize and compensate adequately baseload coal and nuclear EGUs for the critical reliability and resiliency attributes they provide is simply another flaw that stands in the way of that objective. The Commission should intervene to ensure that the markets evolve once again to appropriately value these attributes, and thereby prevent customers from losing electricity when they need it most, rather than allowing the flaw to persist merely in the name of preserving a market purity that does not and has never existed.

⁴⁷ See, e.g., *ISO New England, Inc.*, 152 FERC ¶ 61,190 (2015).

⁴⁸ FERC, STAFF REPORT ON CENTRALIZED CAPACITY MARKET DESIGN ELEMENTS 15 (Aug. 2013).

⁴⁹ See, e.g., *Midwest Indep. Transmission Sys. Operator, Inc.*, 136 FERC ¶ 61,025 at PP 6-8 (2011).

V. The Commission Should Take Action to Ensure the Resiliency Benefits Provided by Coal and Nuclear EGUs are Properly Valued.

It is clear that the Commission should act and finalize the DOE proposal. As DOE has proposed, the Commission should require regional transmission organizations (“RTOs”) and independent system operators (“ISOs”) to amend their tariffs to ensure that the full reliability and resiliency benefits of existing coal and nuclear EGUs are recognized and fully compensated, and that markets do not lose those crucial reliability and resiliency attributes from the premature retirement of existing coal and nuclear facilities. To ensure that existing coal and nuclear EGUs are able to remain in the market, these units should be permitted to, as proposed by DOE, recover fully allocated costs, including but not limited to, operating and fuel expenses, costs of capital and debt, and a fair return on equity and investment.⁵⁰

The Commission’s action should focus solely on existing coal and nuclear facilities, because they are necessary components of a diversified portfolio of EGUs that retains the fuel assurance capability necessary for grid resiliency. Modified gas, hydroelectric, and other non-coal and non-nuclear EGUs cannot provide such diversity and fuel assurance, and including these facilities within the scope of the Commission’s action could undermine the achievement of the Commission’s reliability and resiliency objectives.

Consistent with prior interventions, the development of rules necessary to enact the tariff revisions for the implementation of the Commission’s action should be based, to the extent possible, on existing RTO/ISO mechanisms for the procurement of capacity and energy. Given the urgent need to address this issue and avoid the unnecessary loss of critical reliability and resiliency benefits through the premature retirement of coal and nuclear EGUs, the Commission

⁵⁰ 82 Fed. Reg. at 46948.

should not allow the needed intervention to be unduly procedurally delayed. Therefore, the Commission should require RTOs/ISOs to submit compliance filings in a timely manner.

WHEREFORE, for the foregoing reasons, UWUA asks that the Commission take actions in accordance with the positions asserted here.

Respectfully Submitted,

D. Michael Langford

Subject: Energy Supply Emergency
Attachments: UWUA Local 270.pdf

It is becoming quite alarming at the rate that Nuclear and Coal Fired Generation plants across America are being shut down. The amount of mega-watts that are being removed for the grid due to closing both Nuclear and Fossil generation is one of National Security.

What plan is in place to supply electricity to millions of Americans? Gas is not the answer, there is not enough gas. Wind Power, not enough, solar, no and right on down the line. These Nuclear and Fossil Plants are vital to the electrification of America and our security as a nation.

These plants need to be compensated for the cost of their operation, they can't be shut down. Once they re they are gone for good, then what will you do?

I am asking that you do the right thing in the interest of the American People and National Security, issue an emergency order Pursuant to Federal Power Act Section 202 (c).

Attached is the comments that I previously sent

Re: Grid Resiliency Pricing Rule
FERC Docket No. RM18-1-000

**COMMENTS OF THE UTILITY WORKERS UNION OF AMERICA, LOCAL
UNION 270 IN SUPPORT OF THE PROPOSED RESILIENCY RULE**

On September 28, 2017, the Department of Energy ("DOE") issued the "Grid Resiliency Pricing Rule" (the "Proposal") directing the Federal Energy Regulatory Commission ("FERC") to adopt a rule requiring operators of organized markets to "ensure that certain reliability and resiliency attributes of electric generation sources are fully valued." Such a rule, as contemplated by the regulatory language of the Proposal, will ensure that existing nuclear and coal-fired electric generating stations in Ohio will be compensated appropriately and fully for their costs of operation and will avoid premature retirement. Adoption of that rule will thus sustain the long-term viability of critical power plants, preserve and create jobs, maintain electric reliability, and provide substantial economic benefits to the many hard-working Americans living throughout the region.

1

UWUA Local 270 strongly supports the Proposal and shares the Secretary's urgency that FERC act promptly to direct operators of organized markets to issue the requested rule. FERC has the ability to act, and must act, without undue delay to avoid premature closure of crucial power plants and our members' loss of critical economic and reliability benefits. FERC has thoroughly examined how electric markets function and how those markets affect the continued operation of crucial power plants needed for reliability for some time. FERC has the requisite basis to act now. There is no time for delay. In addition to acting promptly, FERC should also direct organized market operators to issue a comprehensive and enduring set of rules, based on the regulatory language of the Proposal, for the proper compensation of critical power plants. Protracted proceedings undertaken by organized market operators that fail to develop fair, compensatory and transparent rules will only engender market uncertainty and delay in providing sufficient compensation to these facilities, thereby jeopardizing the operation of the very plants that the DOE seeks to maintain in operation.

fjmez@local270.org

II. DESCRIPTION OF UWUA LOCAL 270

UWUA Local 270 is a progressive labor organization that represents individuals in the Electric Utility, Generation and Water industries.

III. DESCRIPTION OF UWUA LOCAL 270'S INTEREST IN PROCEEDING

UWUA Local 270 is a party to a collective bargaining agreement with the owners of a nuclear power plant located in Ohio. As a result, the wages, terms and conditions of employment of its members may be directly affected by the actions taken by the FERC and operators of organized markets in this proceeding. Thus, UWUA Local 270 members have a direct and substantial interest in this proceeding. As well, the unique perspective of UWUA Local 270 and its members will only serve to enhance the record in this proceeding.

IV. COMMENTS

The communities where struggling baseload coal and nuclear power plants are located are dependent on the jobs and economic development opportunities the power plants provide. The recent decline in Ohio's electric power industry, for example, has led to reductions in operations and capital improvement expenditures at numerous power production and manufacturing facilities across Ohio. This has led to extreme hardship for the thousands of union workers employed in this industry as well as their families.

It is imperative that baseload coal and nuclear plants continue to operate in light of these dire circumstances. Baseload coal and nuclear plants in Ohio provide thousands of MWs of reliable power, and provide union jobs and economic opportunities to UWUA Local 270 members. UWUA 270 has approximately 1,000 members including those who work at the Perry Nuclear Power plant and a coal plant in Avon, Ohio. The maintenance and capital improvement work on these plants also supports the local economy by creating thousands of well-paying union jobs for contractors during plant outages. In addition, these plants contribute millions each year in state and local tax revenues that support local schools, police and fire departments and other vital public services.

The loss of jobs, tax revenue, and the ripple effect of such losses throughout the local economy, will have a severely detrimental impact on the region.

The issuance of a rule preserving the continued operation of resilient baseload coal and nuclear power plants will maintain a reliable supply of electricity for the region's energy-intensive economy in two ways. First, the preservation of certain plants will avoid the need to replace lost generation with imports and the associated construction of infrastructure to facilitate such importation. Preserving baseload coal and nuclear power plants will keep these needed, reliable facilities running close to home without the need to depend on distant resources, particularly during catastrophic events like severe storms, to fulfill our region's dynamic need for reliable electricity.

Second, premature plant closures will deplete the stable of highly skilled (and specifically trained and experienced) employees, many of whom have lived in the region for several years and who take great pride in their work. With a depletion of this skilled and experienced group of workers, and the possible replacement of these workers with more distant and perhaps less-skilled individuals, we will see a direct and adverse impact on our ability to maintain the generation facilities that continue to operate and, as important, our ability to respond promptly to severe contingencies affecting the operation of these remaining plants in operation. In short, allowing baseload coal and nuclear power plants to close prematurely will have an adverse impact on the reliability of the region's electricity supply and on the reliable operation of the regional electricity system.

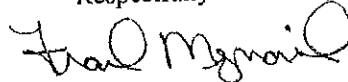

Rates for the sale of electricity that are inadequate to sustain the operation of base load generation facilities that provide reliability and resiliency support cannot be considered to be just and reasonable. Because of the loss of jobs, the significant reduction in payments to local governments, and the decline in electricity resource and grid reliability that would result from

deactivation of the nuclear and coal-fired generating facilities in Ohio, it is essential that the FERC adopt a rule, such as that proposed by DOE, which will ensure that such generating facilities are fully compensated for their costs and will remain in operation.

In order to mitigate the risk that such generating units may be deactivated prematurely, UWUA Local 270 strongly urges FERC to adopt the rule proposed by the DOE as promptly and comprehensively as possible. FERC has a sufficient record to act that will be further bolstered by the comments considered in this proceeding. FERC has thoroughly considered the impact of electric markets on the sustained operation of at-risk power plants and, as noted by the Secretary of the DOE, the time to act is now given the severe impacts to system reliability and resilience, and national security, attendant to the premature closure of crucial power plants. Any protracted delay in creating fully compensatory market rules will only exacerbate the problem of pre-mature closures.

In acting promptly, FERC should also direct the organized market operators to issue a rule that is not only compensatory (and based on the regulatory language of the Proposal) but comprehensive and enduring. The rules to be issued by operators of organized markets should be fair and transparent, and should ensure that critical power plants can continue to operate for the long-term and without the prospect of repeated re-examination and adjustment to their market compensation. The uncertainty that less than comprehensive and enduring market rules will engender will defeat the very purpose of preserving the extended operation of these much-needed power plants.

Respectfully submitted,

Frank Mezmarich
President

Description Information

Who are you trying to contact? Contact the President

Description Hi Mr. President,

We need help here in PA & OH. First Energy announced the shut down of Nuclear Power Plants in PA & OH. We need to keep our Nuclear Plants & not just rely on Natural Gas.

First Energy would like to protect consumers from this outcome & keep it's Nuclear Plants open by receiving "zero emission credits," which would appropriately compensate nuclear energy for not emitting carbon dioxide or other air pollutants. Illinois & NY approved similar measures to keep their nuclear plants running. Closing the reactors would almost certainly cost consumers in long run. The plants are struggling financially because price of natural gas has fallen so far that it is - for now - cheaper than the reactors, assuming you do not value clean air or reliability. The premature closing of nuclear plants would reduce PA & Ohio's energy diversity, worsen air pollution, & raise electricity prices. The problem is once the nuclear plants close, they cannot be restarted. The shutdown decision is permanent, even if historically low natural gas prices may not be.

Low natural gas prices have been a boom to industry & consumers. But why put all our eggs in one basket? Diversity in energy supplies hedges against unexpected shortages or price hikes in any one energy source. During the "polar vortex" of Jan 2014, for example, many natural gas & coal plants suffered outages just when electricity demand was surging to record levels. Meanwhile, operating nuclear power plants across country kept running at near-full capacity & helped avoid blackouts during some of the coldest weather in memory. Shutting down the reactors means consumers will be hit much harder when the unexpected happens. We should also consider the economic impact as well. The Plants contribute millions annually to PA & OH's economy, support thousands of jobs and producing millions in state and local tax revenues.

Please help so we can avoid this expensive mistake.

Re: Grid Resiliency Pricing Rule
FERC Docket No. RM18-1-000

**COMMENTS OF THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL
WORKERS, LOCAL UNION 272 IN SUPPORT OF THE PROPOSED RESILIENCY
RULE**

On September 28, 2017, the Department of Energy (“DOE”) issued the “Grid Resiliency Pricing Rule” (the “Proposal”) directing the Federal Energy Regulatory Commission (“FERC”) to adopt a rule requiring operators of organized markets to “ensure that certain reliability and resiliency attributes of electric generation sources are fully valued.” Such a rule, as contemplated by the regulatory language of the Proposal, will ensure that existing nuclear and coal-fired electric generating stations in Ohio will be compensated appropriately and fully for their costs of operation and will avoid premature retirement. Adoption of that rule will thus sustain the long-term viability of critical power plants, preserve and create jobs, maintain electric reliability, and provide substantial economic benefits to the many hard-working Americans living throughout the region.

IBEW Local 272 strongly supports the Proposal and shares the Secretary’s urgency that FERC act promptly to direct operators of organized markets to issue the requested rule. FERC has the ability to act, and must act, without undue delay to avoid premature closure of crucial power plants and our members’ loss of critical economic and reliability benefits. FERC has thoroughly examined how electric markets function and how those markets affect the continued operation of crucial power plants needed for reliability for some time. FERC has the requisite basis to act now. There is no time for delay. In addition to acting promptly, FERC should also direct organized

market operators to issue a comprehensive and enduring set of rules, based on the regulatory language of the Proposal, for the proper compensation of critical power plants. Protracted proceedings undertaken by organized market operators that fail to develop fair, compensatory and transparent rules will only engender market uncertainty and delay in providing sufficient compensation to these facilities, thereby jeopardizing the operation of the very plants that the DOE seeks to maintain in operation.

IBEW Local 272 is a progressive labor organization that represents individuals working in the baseload generation industry.

III. DESCRIPTION OF IBEW LOCAL 272'S INTEREST IN PROCEEDING

IBEW Local 272 is a party to a collective bargaining agreement with the owner of a large baseload coal power plant located in Pennsylvania. As a result, the wages, terms and conditions of employment of our members may be directly affected by the actions taken by the FERC and operators of organized markets in this proceeding. Thus, IBEW Local 272 members have a direct and substantial interest in this proceeding. As well, the unique perspective of IBEW Local 272 and its members will only serve to enhance the record in this proceeding.

IV. COMMENTS

The communities where struggling baseload coal and nuclear power plants are located are dependent on the jobs and economic development opportunities the power plants provide. The recent decline in Pennsylvania's electric power industry, for example, has led to reductions in operations and capital improvement expenditures at numerous power production and manufacturing facilities across Pennsylvania. This has led to extreme hardship for the thousands of union workers employed in this industry as well as their families.

It is imperative that baseload coal and nuclear plants continue to operate in light of these dire circumstances. Baseload coal and nuclear plants in Pennsylvania provide thousands of MWs of reliable power, and provide union jobs and economic opportunities to IBEW Local 272 members. The Bruce Mansfield generation station directly employs approximately 215 IBEW Local 272 members, and the maintenance and capital improvement work on this plant supports the local economy by creating hundreds of well-paying union jobs for contractors. In addition, this plant contributes millions each year in state and local tax revenues that support local schools, police and fire departments and other vital public services. The loss of jobs, tax revenue, and the ripple effect of such losses throughout the local economy, will have a severely detrimental impact on the region.

The issuance of a rule preserving the continued operation of resilient baseload coal and nuclear power plants will maintain a reliable supply of electricity for the region's energy-intensive economy in two ways. First, the preservation of certain plants will avoid the need to replace lost generation with imports and the associated construction of infrastructure to facilitate such importation. Preserving baseload coal and nuclear power plants will keep these needed, reliable

facilities running close to home without the need to depend on distant resources, particularly during catastrophic events like severe storms, to fulfill our region's dynamic need for reliable electricity.

Second, premature plant closures will deplete the stable of highly skilled (and specifically trained and experienced) employees, many of whom have lived in the region for several years and who take great pride in their work. With a depletion of this skilled and experienced group of workers, and the possible replacement of these workers with more distant and perhaps less-skilled individuals, we will see a direct and adverse impact on our ability to maintain the generation facilities that continue to operate and, as important, our ability to respond promptly to severe contingencies affecting the operation of these remaining plants in operation. In short, allowing baseload coal and nuclear power plants to close prematurely will have an adverse impact on the reliability of the region's electricity supply and on the reliable operation of the regional electricity system.

Rates for the sale of electricity that are inadequate to sustain the operation of base load generation facilities that provide reliability and resiliency support cannot be considered to be just and reasonable. Because of the loss of jobs, the significant reduction in payments to local governments, and the decline in electricity resource and grid reliability that would result from deactivation of the nuclear and coal-fired generating facilities in Pennsylvania, it is essential that the FERC adopt a rule, such as that proposed by DOE, which will ensure that such generating facilities are fully compensated for their costs and will remain in operation.

In order to mitigate the risk that such generating units may be deactivated prematurely, IBEW Local 272 strongly urges FERC to adopt the rule proposed by the DOE as promptly and comprehensively as possible. FERC has a sufficient record to act that will be further bolstered by the comments considered in this proceeding. FERC has thoroughly considered the impact of

electric markets on the sustained operation of at-risk power plants and, as noted by the Secretary of the DOE, the time to act is now given the severe impacts to system reliability and resilience, and national security, attendant to the premature closure of crucial power plants. Any protracted delay in creating fully compensatory market rules will only exacerbate the problem of pre-mature closures.

In acting promptly, FERC should also direct the organized market operators to issue a rule that is not only compensatory (and based on the regulatory language of the Proposal) but comprehensive and enduring. The rules to be issued by operators of organized markets should be fair and transparent, and should ensure that critical power plants can continue to operate for the long-term and without the prospect of repeated re-examination and adjustment to their market compensation. The uncertainty that less than comprehensive and enduring market rules will engender will defeat the very purpose of preserving the extended operation of these much-needed power plants.

Respectfully submitted,

Vic Roppa
President
IBEW Local 272

Subject: Energy Supply Emergency Declaration Ability
Date: Sunday, April 15, 2018 9:14:59 AM

A factor to be considered in these decisions is the company's position relative to deregulation of portions of their utility business. Specifically, FirstEnergy decided how it would operate in the deregulated markets. Absent a natural or extraordinary disaster, FirstEnergy should not be afforded the benefits that would come from an energy supply emergency declaration, unless they would be willing to return the net financial benefits they received from their deregulated operations to their customers. Thank you.

There is no need to bail out coal and nuclear power plants. Our electric grid can and will survive without them.

I am absolutely opposed to using section 202(c) to support uneconomic coal and nuclear power plants.

Rick Perry and Donald Trump are not fooling anyone. This has nothing to do with national security. It is a blatant handout to wealthy contributors who bet on the wrong technology.

Subject: 202c bail-out of FirstEnergy
Date: Sunday, April 15, 2018 11:09:39 PM

Dear DOE,

FirstEnergy is not good at managing or operating utility assets. They, and Robert Murray, are asking for hand-outs -- and this after making large political donations to the current administration.

I would find it impossible to view a bail-out as anything other than bought-and-paid-for crony capitalism of the worst kind.

I strongly urge you to refuse the request.
sincerely,
Keith Campbell

Subject: Section 202c
Date: Sunday, April 15, 2018 10:42:09 PM

To whom it may concern,

I strongly believe section 202c should solely be limited to disaster recovery purposes. By enabling the use of section 202c to bail out struggling, legacy energy sectors we are disregarding both natural market forces and poor business practices of those entities.

Please do not use FPA section 202(c) to aid First Energy. Keeping coal power plants running is not a matter of national security, particularly now, when there is no weather or war-related crisis involved.

Thanks-----Andy Eichelberger, Winchester, MA

Hello,

My name is Richard Giddeon (b) (6)

I'm very familiar with both

forms of electricity production.

To me it is inconceivable that we would shut down the large base loaded generators such as nuclear and coal where the related fuel supply is located on site. During any emergency there is a substantial reserve of fuel ready to be converted to electricity in the form of coal in the coal yard and uranium in a reactor. In addition, the large generators provide stability to grid frequency simply because of the mass of the rotors in the generators. In the case of large nuclear plants these rotors typically weigh 200 tons. This rotating mass provides stability to the grid in a way that small generators do not.

The smaller gas turbines have two MAJOR flaws. First, they require a constant supply of gas from off site, in some cases from hundreds of miles away. Second they are generally much smaller and do not provide the frequency stability that the large generators provide to the grid. A disruption of the gas pipelines and associated infrastructure will cause immediate failure of the power grid in localized areas. The more dependent we become on Gas Turbines, the more the grid is likely to experience major disruptions related to fuel supply.

(b) (6)

implore the DOE to use whatever regulations are necessary to keep large scale power generation units with on-site fuel running to support the stability of the US Power Grid.

A large loss of power anywhere in the US at any time will constitute a National Emergency with horrendous negative results. i.e. see Puerto Rico after the 2017 Hurricane season.

Regards,

Richard Giddeon

Subject: Sustaining Nuclear Power
Date: Sunday, April 15, 2018 5:19:37 PM

Nuclear electric power generation is a non-polluting, stable source of power for the nations power grid. The notion that solar and wind power are suitable platform for a stable grid is questionable at best. Gas fired plants are economical at present, yet this is a commodity that can change in cost in the global market unpredictably.

I urge the DoE to step forward to assure we maintain the US Nuclear generating plants through at least the current licensing period to allow for a comprehensive review of the US grid and future electrical power requirements.

Subject: Use of Federal Power Act - Let the Market Decide!
Date: Sunday, April 15, 2018 1:15:32 PM

Dear DOE:

My Subject line says it all.

We are not facing an energy emergency. Do not prop inefficient components of our energy supply. In the long run, it will cost us all much more than is immediately apparent. Let the market pick the winners here.

Thank You.

Dear Secretary of Energy and Department of Energy,

I respectfully submit these comments urging the Secretary and Department to deny the FirstEnergy petition.

Key Considerations Established in My Attached Comments

The FirstEnergy request is substantively similar to the Secretary's proposal to the independent Federal Energy Regulatory Commission (except the FirstEnergy request is limited to PJM Interconnection, L.L.C., for no apparent reason other than FirstEnergy's plants happen to be in PJM). My comments (Attachment 1) to the FERC are relevant to the FirstEnergy request, and those comments established among other things:

- The Secretary's proposal would potentially subsidize tens of gigawatts of uneconomic plants, and cost consumers many tens of billions of dollars a year.
- These subsidies would crash market prices and force economic plants on to federal subsidies as well, thus ending the organized markets.
- Retiring plants have three times the forced outage rate of the new plants that the Secretary's proposal would forestall. Thus, the proposal would undermine grid reliability.
- Natural gas supply was not the major problem in the Polar Vortex as PJM data and testimony demonstrate.
- A 90-day (or 25-day) fuel supply requirement has no rational basis. In the Polar Vortex, for example, PJM generation emergencies aggregated 20 hours – less than two days.
- Following the Polar Vortex, PJM strengthened its capacity market to reward performance and penalize nonperformance and has not had a single system generation emergency in more than three years.
- The chance of a generation deficiency in PJM is much less than 1 in 5,000, based on data compiled by ReliabilityFirst Corporation, the regional entity responsible for overseeing PJM reliability.
- If that less than 1 in 5,000 deficiency were to occur it is unlikely to be due to a fuel supply emergency, as Rhodium Group data demonstrate, and unlikely to result in a customer outage due to system reliability tools at PJM's disposal.
- If the FERC were to go forward with subsidizing certain resources for an unimportant quality like fuel supply on site, it should recognize important qualities like environmental/public health damage. Because coal generation causes environmental/public health damage averaging \$32/MWh according to the National Research Council, coal plants would be assessed \$32/MWh for their generation, subtracted from whatever revenues they otherwise receive.

Comments of Former FERC Chairs and Commissioners
